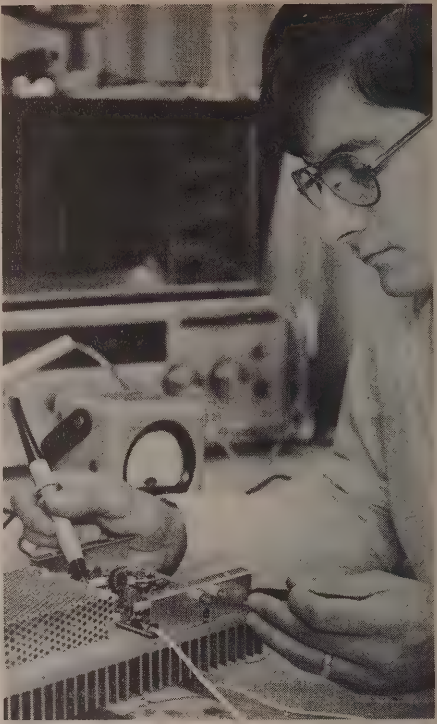
RF power from Amplifier Research. Design excellence in broadband engineering.



AR makes rugged, dependable amplifiers for broadband rf instrumentation. From 10 kHz to 1 GHz, from 1 W to 10 kW, AR amplifiers are designed to deliver under worst-case conditions, without damage, and without shutdown.

AR amplifiers offer instantly available power anywhere in their operating spectrum, without tuning or bandswitching. Your swept-frequency testing tests the equipment, not the amplifier. Your programmed procedures go through with no hangups from the instrumentation.

Meet our comprehensive line.

You'll find an AR amplifier that matches your toughest requirements in power and bandwidth, without overloading you on capability you don't really need. We can also create or modify equipment for OEM applications, or highly specialized systems.

Off-the-shelf or custom, you'll get an AR amplifier that meets the standard of design excellence we're known for, and meets your demand for tough, reliable rf instrumentation.

DESCRIPTION

APEX MICROTECHNOLOGY CORP. offers the industry's largest selection of high voltage, high current operational amplifiers designed for resistive, inductive and capacitive loads. The output of high current models is protected against inductive kickback or back EMF. For optimum linearity, most output stages are biased for class A/B operation. These devices are housed in hermetically sealed 8 pin TO-3 packages.

APPLICATION

These hybrid integrated circuits allow the designer to achieve the precision associated with Op Amps and the power associated with discrete multi-component boosters all in one device. This improves factors of reliability, performance and cost. Some of the prime applications for High current Models include: Motor Drives controlling rate or position, magnetic CRT Deflection, Programmable Power Supplies for constant voltage or current, Valve control, Pin drivers for ATE equipment and compact audio amplifiers. High voltage models often share some of the above applications and also take on tasks such as Electrostatic CRT Deflection and driving piezoelectric transducers.

OUR ONLY BUSINESS IS SIGNAL CONDITIONING

Precision Filters Inc., grew up between the faint remote analog signal and the analog-to-digital converter.

We contributed signal conditioning equipment you control by computer.

We were first to provide 80 dB/octave attenuation and time delay superior to Bessel in multichannel, programmable filter systems. We did it with 1° phase match. And these specifications became the standards of the industry.

Meanwhile, we've grown in other areas of signal conditioning you put under computer control—expanding on our eight years' experience with advanced filter systems.

Most recently, we've developed the first commercially available multiple channel, programmable frequency-band translators. Their analog zoom extends the capacity of existing systems for spectrum analysis, beam forming and modal analysis.

And their sharp selectivity permits them to operate as programmable super band-pass filters.

Our charter is signal conditioning. We will continue to advance technology with our growing line of Precision Conditioners.

Precision Conditioners Today

- Programmable multichannel filter systems for HP, LP, TD, BP, BR and anti-alias filters.
- Programmable multichannel frequency-band translators for analog zoom, beam forming, modal analysis and super filter applications.
- Programmable and automatic gain-ranging multichannel amplifiers.
- Preamplifiers for remote transducers.
- Multimode signal conditioners offering choice of voltage, charge and strain gage conditioning for each channel.
- 1/3 octave filters and analyzers.
- Programmable switching systems.

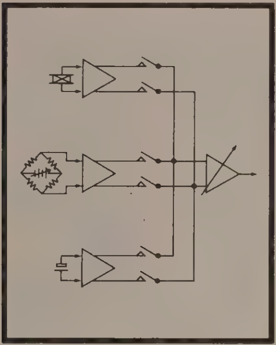
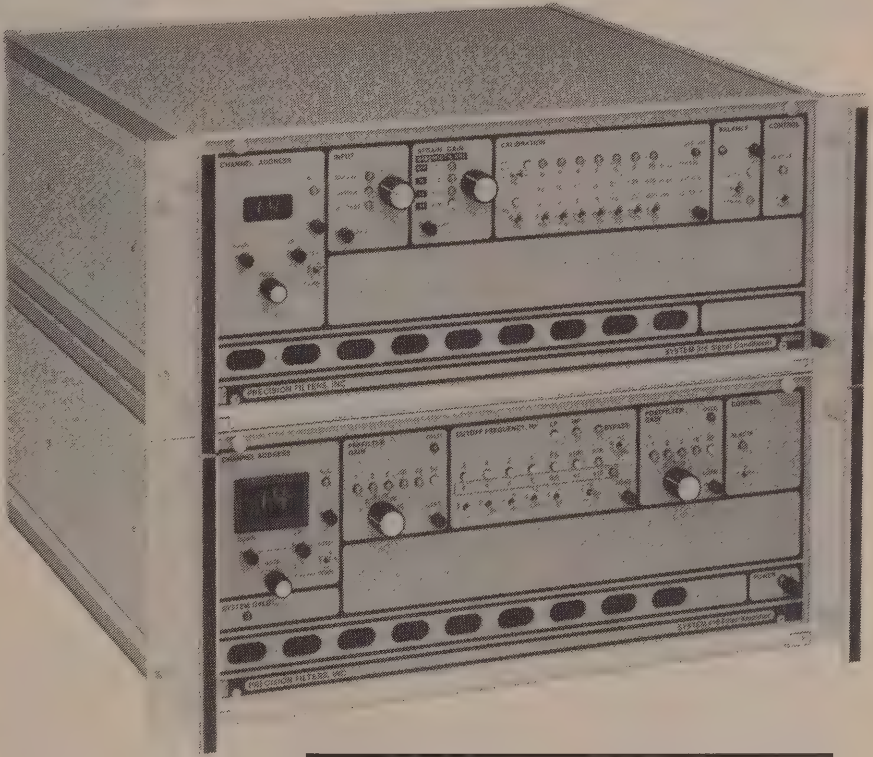
THE MULTIMODE CONDITIONER

PRECISION 316/416





The Precision 316 gives you 16 channels, each with a choice of three types of conditioners—strain, charge and voltage.

To that, we add the Precision 416, which is 16 channels of filter-amplifier.

THE DATA BANKERS

GAIN-RANGING AMPLIFIERS

Signals of wide dynamic range must be conditioned for storage on magnetic tape, because of the limited dynamic range of tape recorders.

Three kinds of selectable conditioning are provided by the Data Banker, Precision 216:

- Filters band-limit the signal to the frequencies of interest.
- Precise networks favorably alter the signal spectrum in what is variously called rolloffs, prewhiteners or equalizers.
- Gain switching keeps the output signal within the prescribed recording limits.

Concurrently, the status of these three kinds of conditioning is recorded so that the signals can be processed or reproduced for playback. No manual logging is required.

Precision offers a choice of conditioning instruments that are finding growing use in underwater acoustic testing. Precision gain-ranging amplifiers are used on acoustic ranges, as well as in ship silencing sea trials for measuring structural and platform noise. They provide backup for on-line analysis, which can be reduced more leisurely in the lab.

PRECISION 216-01-R-01

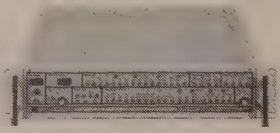
Permits front panel and computer control of all signal conditioning functions. System is auto-ranging.

PRECISION 216-01-R-02

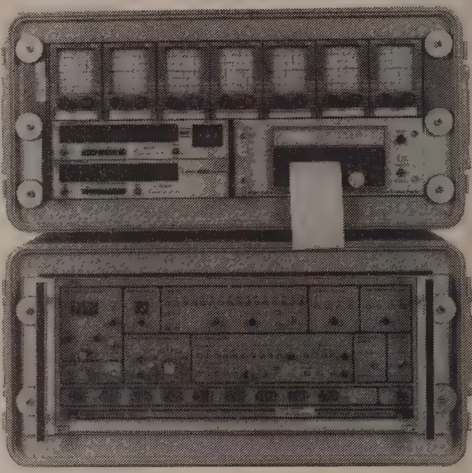
Provides front panel control of all signal conditioning functions and auxiliary equipment. Unit is auto-ranging with system status recorded. Multiple inputs per channel. Most user friendly of any gain-ranging amplifier.

PRECISION 216-03

Our most economical Data Banker. All signal conditioning functions can be either front-panel or computer controlled.



Precision 216-01 amplifier status demultiplexer offers a simple, economical instrument for reducing tape recorded data in the lab, instead of tying up the full 216-01 system that recorded the data.



Common Features:

- 16 gain states: −12 dB to +78 dB in 6 dB steps.
- Wide bandwidth: 1 Hz to 500 kHz.
- 120 dB dynamic range. Maximum output of 10V peak and broad-band noise of 5μV rms.
- Phase match between channels of ±1°, 10 Hz to 100 kHz.
- 4 selectable low frequency rolloffs.
- 4 selectable high frequency rolloffs are optional.
- AC coupled differential input: 100 dB CMRR.
- Channel overload indicators.
- Calibration oscillators.
- Output monitors.

Precision 216-01-SSX-02 signal selection matrix extends the number of inputs to 108. Nine banks of 12 inputs are selected by local or remote control.

Description	A single-channel constant-voltage amplifier featuring a front-panel plug-in circuit board which allows user construction of special signal sources or conditioners.	A constant *current* amplifier, with performance and construction specifications generally equivalent to Model 7560. Both 7570 and 7560 units can be cascaded with supplied cables to create systems with output power up to 20KVA.	Features unique output control circuitry with on-board computers. With difficult loads, 7550 amps will *limit* output only as necessary, returning to full output automatically when load clears. SERIES 5500 POWER SUPPLIES/AMPLIFIERS

Tecron Series 5500 Power Supplies/Amplifiers are off-the-shelf products, offered without options or add-on modules. They are performance proven, capable of all-day operation at full power without interruption (in closed cabinets or stacked in racks, forced-air cooling is recommended). All are dual channel amps, rear-panel switchable to single-channel operation.

These amplifiers include an AB+B output circuit developed by Crown for improved reliability and high linearity of the output signal. The amplifiers also include the IOC™ circuit, a unique distortion indicator which reports any variance from input of output waveform, regardless of the cause. The IOC™ sensitivity enables users to accurately set the gain controls just below clip level.

All input connections are BNC; output connections are binding posts on ¾″ centers for banana-plugs.

All 5500 amplifiers develop maximum power with 2 to 4 ohm loads, but can handle any load from pure reactive to pure capacitive.

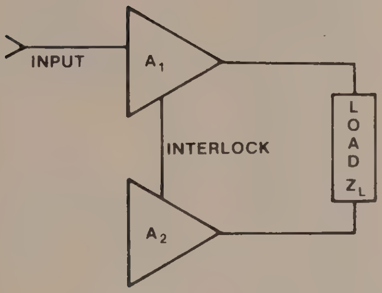
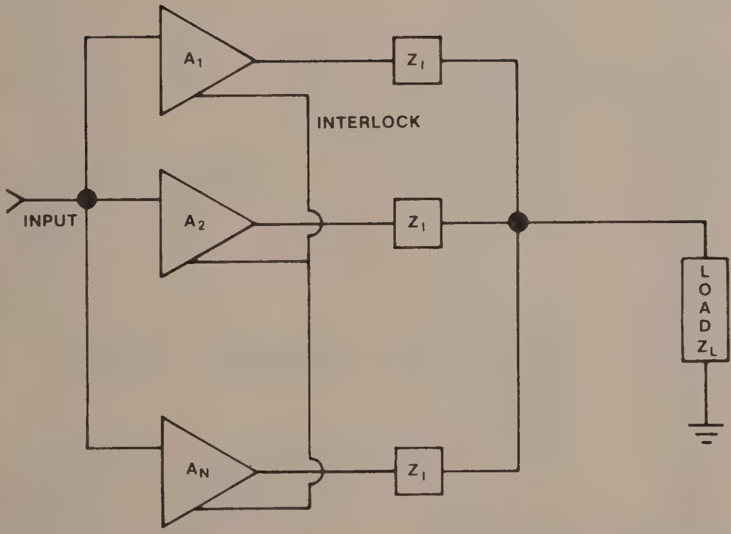
APPLICATION NOTES

Various system configurations of Tecron power supplies are possible to obtain greater voltage or current ratings. A few of the more common such configurations are shown here.



$I_L = I_A$
$V_L = 2V_A$
Load on each amplifier: $Z_A = \frac{Z_L}{2}$

7560 Push-Pull Connection



$I_L = I_{A1} + I_{A2} + \cdots + I_{AN} = NI_A$
$V_L = V_A$
Load on each amplifier: $Z_A = NZ_L + Z_I$

7560 Parallel Connection

As noted above, some of the interconnects needed for these systems are standard Tecron accessories. Special interconnects, either control or load, can be entirely user designed and built, or Tecron will be pleased to quote on design and/or fabrication. Since user modifications to Tecron amplifiers may invalidate the warranty, we suggest you review new or unusual applications with Tecron.

Piezoelectric Warning Siren

MODEL AL-612 AUDIOLARM®

THE MODEL AL-612 AUDIOLARM® is a miniature panel or PC mounted alarm that emits a very-loud siren-like tone when power is applied.

The output tone varies from approximately 2500 Hz to 3500 Hz at a 2.5 Hz rate. The audible output level peaks at about 106 dbA when operated from a 12 vdc source.

Designed for battery operated systems of 6 to 12 VDC and will operate very nicely from a 9V transistor radio battery. (Heavy-duty, Alkaline type recommended.)

Some potential applications include fuel vapor detectors (no arcing contacts or RFI), back-up alarms on fork-lift trucks, etc., intrusion alarms, exit alarms, medical alerts and call systems, vending machine tamper alarms, banking machines and credit card verification systems — anywhere an attention-getting alarm is needed. Due to its small size and power requirements, it is ideally suited for portable battery operated devices as well.

SPECIFICATIONS:

OPERATING VOLTAGE: 6 to 12 VDC (Maximum)
OPERATING CURRENT: Up to 100 MA (Voltage Dependent)
SOUND OUTPUT: Up to 106 dB(A) @ 2 ft. with 12 VDC supply. (Strongly Harmonic Police-Like Siren Tone)
OPERATING FREQUENCY: Sweeps from 2500 to 3500 Hz @ 2.5 Hz rate.
OPERATING MODE: Apply power/on, remove power/off.
OPERATING TEMPERATURE RANGE: −20°C to +65°C
STORAGE TEMPERATURE: −40°C to +80°C
TERMINALS: 24 gauge wire, 7 x 32 stranded; Length 2.25″ ends stripped and tinned. Read lead - positive. Black lead - negative.
MATERIAL: ABS-KJB Thermoplastic case
COLOR: Black
MOUNTING: Rear-panel mount in 1⅛ Dia. mounting hole, maximum panel thickness .250″.

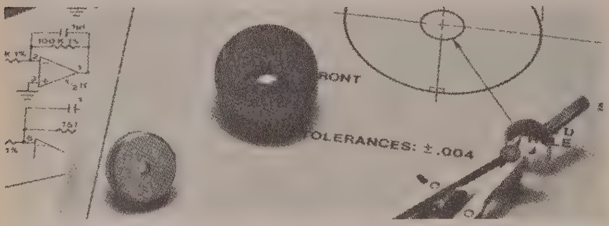
Sound Transducers

MS-1/MS-3/MS-2 SUPERIOR QUALITY MADE IN U.S.A.



FRONT
TOLERANCES: ±.004

The **MS-1**, **MS-3** & **MS-2** Sound Transducers are piezoelectric devices for applications requiring a warning or alerting audible output. Both are designed to overcome the cost, size and supply current liabilities of devices such as buzzers and loudspeakers.

These completely assembled and tested audio units deliver consistent product performance at lower cost. They also eliminate difficult and costly lead attachment, mounting and adjustment operations from your production line. And may be handled like any other electronic component during stocking and assembly, inserted on a PC board and wave-soldered for high volume production.

The **MS-1**, **MS-3** & **MS-2** utilize a wide variety of drive signals which can be generated easily and economically as part of the product circuitry. As medium impedance devices of a few thousand ohms, the **MS-1**, **MS-3** & **MS-2** do not require any special drive or by-pass considerations at most frequencies of interest. In many applications, drive may be delivered directly from logic circuits or similar low level stages. Volume, frequency, and mode are functions of the circuitry you supply.

Sound has never been as important as it is today. In various fields, sound generators are being used extensively. To assure that sound products function faithfully to design specifications, the sound generator must be a well-made, high precision product. Citizen Electronics calls on extensive manufacturing experience and advanced technology to engineer a wide range of high-performance, cost-efficient sound generators. Our products are recognized for high quality and high reliability. We will continue to combine new ideas and new technology to create high quality sound generators to meet the needs of the times.

Small Size Sound Generator

A high performance design – low current consumption yet large sound pressure level. High precision sound generator – the fruit of extensive technical research by Citizen Electronics. No mechanical contacts afford no electrical noise.

Dynamic Speaker

Only Citizen Electronics can develop and offer such a dynamic speaker. Features a wide reproduction frequency band width and requires minimum space for installation, making it suitable for electronic music boxes, cameras, voice synthesizing, clocks and a variety of other products.

Micro Buzzer

Ultra compact construction yet rich and pleasant sound. This is made possible because the oscillation circuit acts in line with the action of the diaphragm. This can be built in various appliances and can be driven by DC voltage.

Melody Unit

Features ample volume of sound. Meets requirements for use as a signal and alarm and is very musical at the same time, thanks to Citizen Electronics know-how.

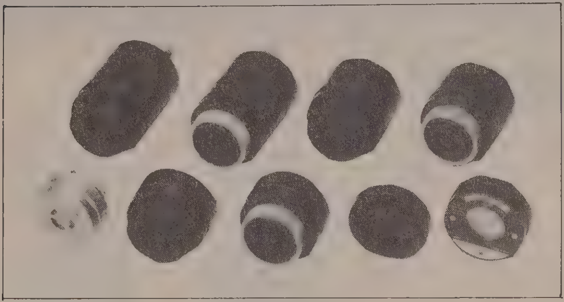
Sonalert® Audible Signals



Mallory Sonalert® signals produce an audible tone by electronic means when voltage is applied. Voltages from 1V to 250V may be used depending upon the model.

Electrical power is converted to sound by means of a piezoelectric transducer operating substantially at resonance in a solid state oscillator resulting in efficient power conversion.

Sonalert signals may be powered by many electrical sources ranging from single cell batteries to industrial power lines. Little electrical power is required making them ideally suitable for portable battery operated equipment. This low power feature allows the Sonalert signal to be turned on or off with a low power transistor, SCR, or integrated circuit. Completely solid state with no moving parts, no arcing, and no mechanical wear, the Mallory Sonalert signals should give you many years of trouble-free service.

Sonalert® Audible Signals

Case Style F

Mounting—Insert into printed circuit board and hand or machine solder. For recommended fluxing, soldering, and cleaning procedures, send for Mallory Audio Signal Engineering Bulletin 778.

Terminals—.031 dia. soldercoated copperclad steel.

Electrical Connections—SBM2, SBM428, SBM616P, SBM616J—When pin 1 is connected to + voltage and pin 3 is connected to common (−), unit will sound. Pin 2 is for mechanical support only and is not connected internally.

SBM616PU, SBM616JU—When pin 1 is connected to + voltage, and pin 3 is connected to common (−), and the voltage on pin 2 is within 1.25V of pin 1 or higher, the unit will sound a pulsing tone. When the voltage on pin 2 is within .9V of pin 3 or lower the unit will sound a continuous tone. The maximum voltage which may be applied to pin 2 before damage may occur is ± 16V referenced to pin 3. Pin 2 input impedance is 110K ohm.

Environmental specifications

Surge voltage

15% over maximum rated voltage applied for less than one minute.

Reverse voltage — DC models

Maximum reverse polarity equal to rated voltage for one minute. Some models may sound softly when subjected to reversed polarity voltage.

Life specification

Continuous—100 hours continuous operation at 65°C with maximum rated voltage applied.

Intermittent—A duty cycle of 1 minute on, 5 minutes off, a minimum of 5000 times at room temperature and maximum rated voltage applied.

Life expectancy

5 years under normal operating conditions.

Storage temperature

−40°C to +85°C.

Operating temperature

−30°C to +65°C.

Humidity

The Sonalert® signal should operate after having been subjected to 95% Relative Humidity at +40°C continuously for 100 hours. After removal from test, the unit should be allowed to dry a minimum of 4 hours at room temperature before operation. Units should deliver original output characteristics.

Vibration

The Sonalert signal should be mounted in the standard manner on a mounting panel. The specimens should be subjected to a harmonic motion having an amplitude of 0.03 inch (0.06 inch maximum total excursion). The frequency should be varied uniformly between a limit of 10 and 55 Hertz. The entire frequency range from 10 to 55 Hertz and return to 10 Hertz should be traversed in approximately one minute. Motion should be applied for two hours in each of 3 mutually perpendicular planes (total 6 hours). This test should be conducted while the Sonalert signal is not operating. After completion of test, Sonalert signals should meet specifications.

Salt spray

The Sonalert signal should meet specified operating conditions after completing 96 hours in an atomized salt spray while not operating. The spray should consist of a 5% salt solution atomized by a forced air supply. The solution should be sprayed through a nozzle into a chamber maintained at 35°C. After salt spray, the unit should be removed and washed in running water not warmer than 40°C. A soft hairbrush or plastic bristle brush should be used, lightly brushing to remove salt deposits from the unit. The cleaned Sonalert signals should be placed on absorbent material with the nose cone pointed downward and allowed to dry at room temperature for 24 hours prior to use.

Terminal strength

5 pounds, applied axially for a period of 5 minutes. This is considered a destructive test.

Custom designed Sonalerts®

Even though there are many standard Sonalert models listed in this bulletin, we encourage you to contact Mallory regarding other audio signalling devices for your OEM custom applications. These can involve the modification of existing models, a completely new design or an entire system to provide multi-signals for various functions.

Our engineering staff has over 10 years experience in the design of audible signalling products for commercial, military, industrial, and automotive applications. We have an excellent, well equipped laboratory for the measurement of electrical and acoustical characteristics and can assist you in establishing audible signal specifications.

Shown here are three examples of custom Sonalert models currently being used in automotive, agricultural, and space applications.

"T" AND BALANCED "H" ATTENUATORS

DEFINITION: Under this group we list those types which have zero insertion loss for 1:1 impedance ratios and constant impedance, both in and out on all steps of control. These networks may be inserted in a transmission system without introducing insertion losses. For unequal impedance ratio controls an insertion loss greater than zero is necessary. The amount depends upon the impedance ratio. The "T" control is used where one side of the line is grounded and the "H" where neither side of the line is grounded. They will not operate properly otherwise.

DESCRIPTION: Shallco offers two types of "T" attenuators, the "Bridged T" and the "T". Since both types are electrically and mechanically interchangeable, in the circuit, we list them all as "T" controls. The "Bridged T" consists of two variable and two fixed resistors and requires two rows of contacts. Over a certain range of attenuation and impedance, due to its electrical simplicity, this type offers advantages over the "T". The "T" employs three variable resistors and requires three rows of contacts. In the case of the "H" type network, we also offer the "Bridged H" and "H" form employing two or three sets of variable resistors, and a corresponding number of rows of contacts for each section.

CUEING: These networks may be obtained with a built-in cueing circuit. In these controls provision is made at the extreme attenuation position for connecting the incoming signal to a cue circuit before "FADING IN" the signal. By this means, a program can be smoothly "BROUGHT IN" at the right time without the operation of any additional switches. A lug on the terminal board is provided for connecting to the cueing system.

USE: These networks may be used as volume controls in low and high level multi-channel mixers and all types of measuring equipment where precision control is required.

DECADE ATTENUATORS—AUDIO

SERIES 2500

The Series 2500 Decade Attenuator units are step type precision networks, designed for use in measuring equipment. These units are particularly adaptable for use in noise meters, audiometers, transmission measuring sets and attenuation networks.

All the controls in this series have ten steps of attenuation. The frequency characteristics are essentially flat from zero to 50 kc. Positive, accurate detents are supplied on all units. The mechanical construction of these networks is the same high quality as supplied on all Shallco attenuators.

Electrically, these units are offered in three circuit types—Potentiometers, "T" and Balanced "H". Resistors are calibrated to an accuracy of ±1%. For best results, it is recommended that the power input be limited to 0.5 watt or less. If a higher level input is required, please specify this information when ordering.

690

Models 690 and 693 Series Attenuation Networks are decade type, direct reading units providing reliable performance throughout the audio frequency spectrum.

Used as secondary attenuation standards, they are especially useful in the performance of general laboratory or production tests where extreme accuracy is secondary. They are used for low level testing at audio frequencies, and can be used at frequencies up to 50,000 cycles with very little decrease in accuracy.

An outstanding feature of these attenuation networks is flexibility; input and output impedances may be changed by means of convenient plug-in pads, available in a broad range of values. Both "T" and Balanced "H" versions of the 690 and 693 series are available as standard units.

They are available as portable or rack mounted units.

Input and output impedance adjusting pads are conveniently located and removable from the front panel.

Series 690 networks come with either balanced (Balanced "H") or unbalanced ("T") networks. The two dial models have a range of 0 to 110 db in steps of 1 db. The three dial models have a range of 0 to 111 db in steps of 0.1 db. The models with balanced networks are arranged so they may be used as unbalanced networks with the same attenuation range, but with one-half the base impedance.

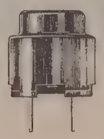
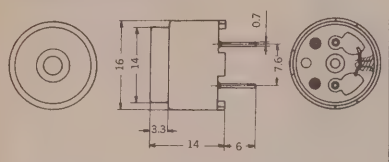
SERIES QMB

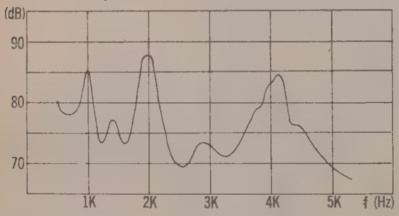


DIMENSIONS: mm



OPERATING CHARACTERISTICS

Sound Output vs. Frequency (At 4 in)



FEATURES

- Pleasing but penetrating "Pure tone" signal
- Available in 3 pin-types rated @ 1, 5, 6 and 12 volts DC
- Wide operating voltage and temperature range
- Pins conform to standard DIP sockets or may be soldered directly to PC board
- Low power consumption

The Star Series QMB is a miniature audio transducer designed to replace bulkier and more expensive speakers and piezoceramic crystals. It is especially economical for applications in which an audio signal and driving circuitry or a microprocessor clock already exists.

Unlike piezoceramic crystals, which require a minimum of 3 volts and provide poor sound output below 2000 Hz, the QMB functions at only 1 volt and generates loud sound output at frequencies as low as 1000 Hz. Another advantage is the fact that the QMB is mounted in a housing: piezoceramic crystals normally must be enclosed.

APPLICATIONS

The Star Series QMB may be used in a variety of consumer, industrial and military products:

- Pocket pagers and other telecommunications equipment
- Automobile and aircraft systems
- Medical instruments
- Computer peripherals
- Quartz-battery alarm clocks
- Microwave ovens
- Electronic toys and games

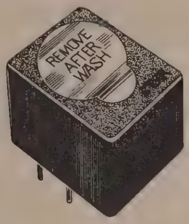
BUZZERS, TRANSDUCERS, PIEZOCERAMIC, MYLAR SPEAKERS AND MORE.

TRANSDUCERS

NEW! SEALED FOR CONTAMINATION-FREE WAVE SOLDERING AND PACKAGED FOR AUTOMATIC INSERTION.

SERIES SMX



FEATURES
- Packaged in magazines for automatic insertion
- Sealed against contamination during wave solder washing
- Wide frequency response curve for consistent output
- Different pin lengths for polarity notation
- Wide operating voltage and temperature range
- Low power consumption
- Small size
- Low cost

The SMX series is a totally new type of audio transducer. Designed with 2 resonant chambers for a wider frequency response curve, it's the first audio component to meet the market needs for automated PC board production.

Packaged in magazines, the SMX is compatible with automatic insertion equipment. The base is epoxy sealed and the sound hole is covered with a removable adhesive-backed foil. This protects the SMX series from contamination during washing and drying in automatic wave solder operations, and also eliminates the extra step of manual insertion, saving both production time and expense.

APPLICATIONS
- Telephone tone ringer
- Feedback for keyboards
- Toys and alarm clocks
- Medical instruments
- Automotive safety equipment
- Battery operated equipment
- Computer peripheral equipment
- Microwave ovens and other household appliances

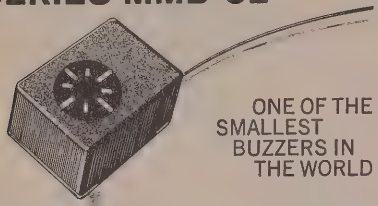
BUZZERS MINIATURE SOLID STATE ELECTRONIC

SERIES MMB-01



ONE OF THE SMALLEST BUZZERS IN THE WORLD

Star's MMB series is the state-of-the-art in miniature electronic buzzers. Tiny size, high efficiency, and value are obtained through use of a custom IC. As all circuitry is solid state, the MMB's simplicity of design provides high reliability not found in conventional "make and break" type alarms. There are no mechanical points to arc or require maintenance, and RF noise is non-existent.

APPLICATIONS

- Alarm clocks
- Timer and control devices
- Portable and battery operated equipment
- Computer peripherals

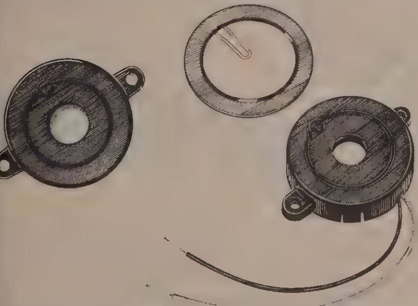
ACOUSTIC GENERATOR ELEMENTS

MINIATURE PIEZOCERAMIC



Piezoceramic acoustic generator elements are used in applications that require:

- minimum curent drain
- low profile or thin size mechanical
- mounting constraints
- high frequency, pure-tone audible signals

Care should be exercised in applications design, however, as mechanical shock may generate spike voltages that could damage other circuit components.

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with The System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will accompany your System.

Don't waste any more time. Get organized now!

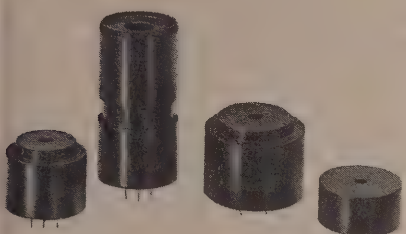
TDK

SOUNDUCERS, BUZZERS, SPEAKERS

SOUNDUCERS



TDK Sounducers operate on the magnetic principle with a circular vibration plate, but no contacts. Sound output is excellent at low voltage because impedance is very low. May be used as a tonal alarm at high (4096 Hz) or low (2048 Hz) pitch or as a speech synthesis speaker or melody source.

Finally.
Telemetry products that aren't hand-me-downs.

Repco designs RF Links products specifically for monitor and data transmission applications.

Most RF Links products available to the Telemetry market were modifications of two-way radios. Then they were adapted as telemetry products, possibly with some concessions in quality and compromises in function.

Repco thinks you deserve better.

We design products exclusively for your data transmission and monitoring needs. We offer design and engineering services. And, we have a dealer network to support your RF needs in over 700 locations throughout North America.

These days, with the cost of wireline data transmission rapidly escalating, a lot of people are turning to wireless for a wide range of applications.

We'll send you our free Applications Manual. It'll give you the specifics on the kinds of products available and show you how RF Links and low cost modems will work for you.

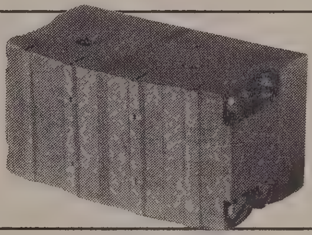
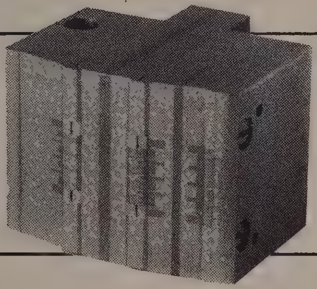
APOLLO MAGNETICS

As a recognized leader in the field, Apollo is the innovator and developer of many new techniques resulting in digital heads with greater range and capability than previously possible.

Series SSI heads are designed for ¼″ streaker/streamer cartridge drives and are available in 2 channel 4, 9, 12 and 16 track configurations to QIC standard formats, operating at or beyond 10K FRPI at 90IPS. Series SSI heads can use high coercivity 600′ tapes or standard 300′ tapes without compensation.

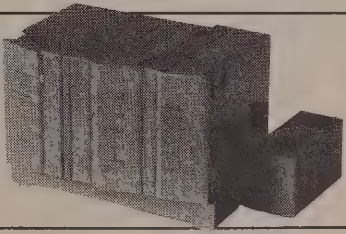
Series BDS heads are utilized on ¼″ cartridge drives operating in bi-directional serpentine modes to 10K FRPI. Shown is the 4 channel, 7 track with selective erase. Other serpentine configurations are available.

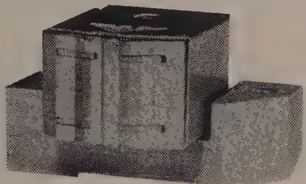




Series EWR head stacks are parallel read after write assemblies with selective erase. The 4 channel head shown is available with optional mounting and cable connectorization. Other track formats can be provided. Recording densities of 3200 or 6400 FRPI are standard.

Series WR/E heads perform at densities of 3200 or 6400 FRPI's in parallel or series Erase, Write, Read modes. Shown is the 4 track with optional erase head and base plate.





Series MCD heads, designed for mini-cartridge drives, operate at 1600 or 3200 FRPI and are available with most standard base/mounting configurations. Higher recording densities and militarized versions are available.

Depending on configuration, the above heads are available with **Apolco I™** or **Apolco II™** *long life* cores and optional hard face chrome or plasma coatings.

Apollo Magnetics has extensive Ferrite and Ceramic capabilities including *Winchester* sliders and assemblies, both monolithic and composite, and Floppy tape ferrite/ceramic indexing heads.

Reliable. All B-G Instruments' printers use fixed-dot, thick-film thermal printheads to achieve fast, quiet operation, long life and reliable performance.

Powerful. B-G's standard DataPlot software makes it easy to print across the paper, print down the paper, and print while you plot data. Simple plotting commands produce curves, grids and bar graphs directly from the input data.

Versatile. For a moderate one-time fixed charge, any B-G printer can quickly be reprogrammed to meet the special requirements of a specific application. Custom character sets, printing stored forms with inserted data, clock/calendar functions, special calculations, conditional operations—these are but a few of the many features that have been included in specially programmed B-G printers. In some cases, a custom-programmed B-G printer serves as the entire logic system for a fairly complex instrument.

For more information. Detailed brochures, a price list and application notes will be mailed to you as soon as we receive your inquiry. If you have an upcoming OEM application, we would be pleased to discuss it with you in detail and arrange a demonstration.

Most B-G Instruments' printer/plotters are also available with cabinets and power supplies.

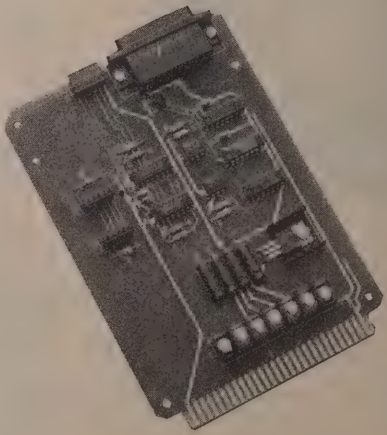
VSC™-TR

TRANSLATOR — REPEATER CARD

The VSC™-TR provides RS-232C translation to RS-422. This gives Serial Control capabilities (using VSC-31) to all computers which can provide RS-232C signals. RS-422 output permits industrial control at distances of up to 4000 feet.

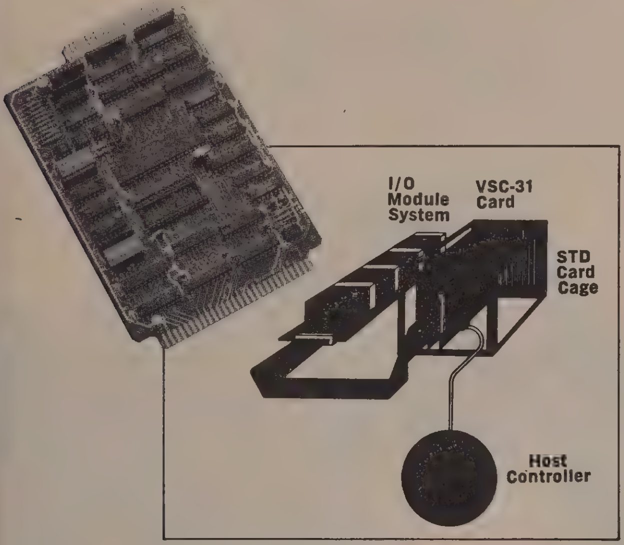
The VSC™-TR also functions as a RS-422 to RS-422 repeater for amplification of signals after each 32 stations.

±12V, +5V power supplies can be connected through an on board terminal block, or by sliding the VSC™-TR card into an STD card cage.



GIC SYSTEMS

GIC SYSTEMS VSC™-31 VERSATILE SERIAL CONTROLLER



The new GIC Systems VSC-31 Versatile Serial Controller is an 8031/51-based system (RS-422 compatible) for distributed I/O control, which can be used in the stand alone mode or as an STD bus controller.

I/O Capacity
The state-of-the-art processor permits up to 127 of these new cards to be linked to one host controller. Each VSC-31 uses resident firmware to control 16 I/O lines directly, or up to a total of 127 I/O ports through utilization of the STD bus interface provided.

STD Bus
Unlike most serial I/O systems, the STD interface permits the addition of other STD function cards at remote locations (including analog as well as digital I/O).

Available Translator/Repeater
GIC Systems VSC-TR card gives RS-422 capability to RS-232C-based system (for I/O control up to 4,000 feet).

Additional Applications
Slave intelligent peripheral controller utilizing DMA on the STD bus. STD-based 8031/51 processor card.

Stand Alone Computer
The VSC-31 can also function as a stand alone 8031 based STD bus controller.

OPERATING MODES

The following operating modes are selected with the DIP switch on the remote unit.

1) Data rate — The data rate of the serial channel is selected.

Data rate (baud)
110
150
300
600
1200
2400
4800
9600

2) Station address — The remote unit is assigned a unique address in the range of 1 to 127.
3) Parity select — The remote unit may be programmed to check for odd or even parity or ignore parity.
4) Checksum disable — The remote unit may be programmed to ignore the checksum on data transmitted by the host. The checksum byte must still be transmitted by the host but the remote unit will not check its value. The remote unit will always transmit the checksum.
5) Command echo mode — This switch specifies if the remote unit will echo the command to the master when it transmits a command acknowledge.

MINI BOX

GENERAL

Heurikon presents Minibox™ - Heurikon's multiuser Unix™ workstation based on its powerful HK68™ single board microcomputer and Uniplus+™ Unix System operating system.

Designed with the OEM in mind, the Heurikon Minibox is both compact and flexible. Included within its 10.5"w x 13.9"h x 20.5"l frame is a 200 or 400 watt power supply, four or six slot Multibus™ card cage (4 - 5 available for user use!), single double density floppy disk drive, streamer tape drive, 31 or 65 Megabyte Winchester drive expandable to two hundred and eighty megabytes (280MB) within the same cabinet (four drive bays are provided). System status LEDS on the front panel inform the user of CPU and disk drive activity. A drop-away rear panel speeds on-site cable installation.

The heart of the Minibox is the powerful Heurikon HK68 microcomputer based on the MC68000 (or MC68010) microprocessor. Contained on this single Multibus board is the MPU; quad channel DMAC; floppy disk drive controller; Winchester interface; four to twelve serial ports; from 128K to 1M byte of on-board RAM; up to 32K bytes of EPROM; CPU status LEDs, eight user LEDs and four DIP switches. Service (if necessary) can be done on a single board replacement level.

Because nearly all system facilities reside on the HK68 microcomputer; disk accesses and servicing of user terminals is done at high speed without the time penalty incurred by having to go through the system bus.

We think a workstation for the OEM system integrator should be compact, provide plenty of *extra* card slots to build a system, allow disk storage to be expanded within the cabinet (not piled around it), offer great performance and be cheap so *everyone* can make money. We offer you Minibox - in less than 1.5 square feet of desk space.

UNIPLUS+™ A MULTIUSER UNIX™ OPERATING SYSTEM

With Uniplus+™ from Unisoft Corporation, Heurikon offers the full power of the Unix™ operating system on the HK68 microcomputer. Including over 160 programs and commands. Uniplus+™ provides Heurikon customers with a flexible and affordable operating system for program development, text preparation, and general office tasks.

Uniplus+™ is derived from the recently released Bell Laboratories System III/V Unix and supports the most useful System III/V utilities, Source Code ControlSystem (SCCS), Programmers Workbench and many of the most powerful "Berkeley enhancements" including:

C-SHELL (csh)
Visual Editor (vi)
"adb," a general purpose debugger
"more," a pagination command for CRTs
"whereis," program and documentation locator
"yacc," yet another compiler compiler and a host of other useful utilities.

Uniplus+™ supports a multi-user/multi-tasking environment using a single chip Memory Management Unit.

Included in Uniplus+™ is a full "C" compiler, associated assembler using MIT mnemonics, and linker/loader. Optional Languages currently available are:

Motorala compatible 68000 macro assembler
ISO Pascal with many of the UCSD extensions (native mode compiler)
FORTRAN 77 (native mode compiler)
RM-COBOL
SVS BASIC (A DEC BASIC-4 compatible BASIC interpreter)
SMC BASIC (A Basic Four compatible BASIC interpreter)

Other utilities include Unify Data Base Management System, Ethernet and floating point processors, and in addition various host protocols.

CP/M-68K™

CP/M-68K™ contains all facilities of other CP/M systems with additional features to account for increased processor address space of up to sixteen megabytes of main memory. Further, CP/M-68K™ maintains file compatibility with all previous versions of CP/M. The file structure allows as many as sixteen drives with up to 512 megabytes on each drive.

CP/M-68K™ includes utility programs such as ED, PIP, and STAT. The debugger, DDT-68K, allows you to debug CP/M-68K™ machine code interactively. The assembler, ASM-68K™, allows you to program in assembly language that consists of Motorola mnemonics. The package also includes a 'C' compiler.

Please inquire about other available operating systems including Poly Forth™, Regulus™, and others.

HK68™ FLEXIBILITY AND POWER

MICROPROCESSOR

The heart of the HK68 is the powerful MC68000 8MHz, or the MC68010 10 MHz microprocessor, which are rapidly becoming the standard of the industry. The MC68000/168010 provides a 16 bit data bus, 16M byte addressing; seventeen 32 bit registers, memory-mapped I/O, and 14 addressing modes. The speed and powerful instruction set of the MC68000/68010 (8-10 MHz) make short work of your microcomputer application.

DMA CONTROLLER

The *quad* channel MC68450 DMA controller has been included on the HK68. The MC68450 is a 4 channel, 16 bit access controller with internal 32 bit addressing, byte, word, or long word transfers, programmable priorities, vectored interrupt support, and both chained and unchained operational support.

MEMORY MANAGEMENT UNIT

The HK68 provides an MC68451 segmented memory management unit with logical to physical address translation, segment sizes of 256 bytes to 16 megabytes, separate supervisor, user program, data memory areas, and write protection. The MC68451 operates with the MPU, DMAC, and the Multibus™.

RANDOM ACCESS MEMORY

The HK68 may be configured to include 128K or 256K or 1 megabyte of dual access RAM with 2 parity bits per word. All RAM is accessible from the Multibus™. A single DRAM controller chip makes the hardware memory refresh transparent to the MPU.

READ ONLY MEMORY

Total capacity: 32K bytes.

BUS INTERFACE

The HK68 interfaces directly to the Multibus™ with 16 bit data path and 24 bit addressing. Master/slave and multimaster modes are supported.

An on-board byte-swap buffer allows the HK68 to interface easily with 8 bit peripherals and CPUs.

The HK68 can support both Motorala and Intel data bus conventions via hardware or software control.

WATCHDOG TIMER

An exclusive on-board watchdog timer is provided to prevent lengthy accesses from locking up on-card facilities.

SERIAL I/O

Four serial ports are provided on the HK68 via two Z8530 (SCC) serial communication controllers.

Each port has a separate, software controlled baud rate generator and all four ports support asynchronous or synchronous communications including IBM BiSync, HDLC, IBM SDLC, as well as others.

RS-232-C is standard on all four ports with EIA RS-422 available on one port. Transfer rates of 38.4K baud asynchronous and 1M bit synchronous are obtainable.

Four to eight additional ports may be added via Heurikon's SBX-SCC Serial Port Expansion Module.

FLOPPY DISK CONTROLLER

Floppy disk control is easily provided using a Heurikon SBX-FDIO plug-on module.

The SBX-FDIO handles single or double sided, single or double densty 5¼ inch or 8 inch floppy disk drive with various record formats. Both 8 inch and 5¼ inch drives may be mixed on the same cable.

WINCHESTER INTERFACE

An 8 bit port with control signals is provided for interface to various hard disk controllers such as the Western Digital WD100112 and Omni Controllers. The port may also be configured to support the SASI standard as defined by Shugart.

Various software drivers are available for CP/M-68K™ and Uniplus+™ operating systems.

STREAMER TAPE DRIVE INTERFACE

An 8 bit interface port for direct connct to an Archive (Cipher) streamer tape drive is included on-card. Support software is available which will run with either CP/M-68™ or Uniplus+™ operating systems.

The port can also be configured to resemble a Centronics (printer) compatible parallel port.

OPTIONAL 16 BIT PARALLEL I/O

The Winchester and streamer tape drive ports may be combined to form a single 16 bit parallel port if desired.

LIGHT EMITTING DIODES/DIPSWITCHES

There are eight latching LEDs and four piano-type dipswitches, located on the top edge of the HK68. Both are user programmable.

BOARD STATE LEDs

A bank of four LEDs is provided on the top edge of the HK68 to display whether the HK68 is in Supervisor, User, DMA, or Halt state.

EXPANSION MODULE CONNECTORS

Twin Intel iSBX™ compatible expansion connectors reside on the HK68 microcomputer. These connectors allow any of the numerous existing plug-in modules to be used on the HK68 for various I/O expansion. In addition, they enable users to quickly and cheaply construct custom interfaces, if needed.

There is one single and one double size mounting area available. Heurikon currently offers a quad channel serial port module and a floppy disk drive controller module. Others available include A/D, D/A, IEEE-488, bubble memory, etc.

COUNTER/TIMERS

Three programmable 16 bit counter/timer channels are available on-card. Two channels may be linked to form a 32 bit counter.

BUILT-IN BOARD SERIAL NUMBER

In order to promote software securty, the HK68 microcomputer has a built-in serial number. This feature will allow an operating system or application program to uniquely identify the host board.

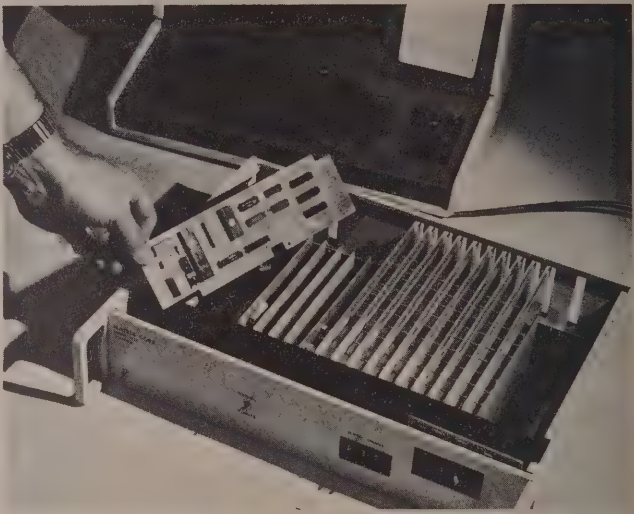
Now High Level Language Controls Intelligent Scanner Via RS-232

Matrix offers a MICROCOMPUTER INTERFACE BOARD (MIB) for the Model 1701 Scanner that provides the basis for a complete DATA ACQUISITION SYSTEM. The MIB allows a host computer or terminal using an RS-232 bus to read 100 analog inputs such as thermocouples, RTD's, strain gages or any other device with output levels from microvolts to hundreds of volts.

Commands such as SELECT CHANNEL and SEND DATA are accomplished by two-way communications between a terminal or computer and the Model 1701 scanner using ASCII and the RS-232 bus. The MIB command format accepts high level languages (BASIC, PASCAL, FORTRAN) to control the scanner. Commands and responses are sent as ASCII strings terminated with a carriage return.

The scanner connects a selected channel to an A/D converter (digital voltmeter, temperature indicator, etc.). The A/D converts the analog signal to parallel BCD (4½ digits, sign, decimal point locator). The BCD data is serialized by the MIB and sent to the computer on command.



The Matrix MICROCOMPUTER INTERFACE BOARD (MIB) is easily inserted into the Model 1701 scanner. Size and scanning capacity of the 1701 are not affected by the addition of the MIB.

Specifically, each board can control the print head solenoids as well as paper feed characteristitics. The controlling circuit for the timing pulses and the character generation is also available for designers who wish to include the interface electronics within overall system design. Suggested interface circuits may be readily obtained from Star without charge.

EASY TO INSTALL AND MAINTAIN

Servicing these printers does not require any unusual mechanical skills or special tools. The replaceable print head and the ribbon may be changed quickly by field personnel with a minimum of down time for your equipment. NEW WIDER MECHANISMS

Two new models have been added to the Star family of printers. These industry proven mechanisms are the success story behind our popular Gemini series printers. And now the same reliable mechanical components can be added to your OEM design to enhance its performance.

Model DP-858 features a 10″ carriage for printing 80 columns at 10 cpi plus condensed and enlarged type from 5 to 17 characters per inch. It accepts both single sheets and roll paper. A tractor feed option handles fan fold stock. A print speed of 120 cps with the Star controller, plus low cost Underwood-style spool ribbons make the DP-858 a good device for products requiring an integral printer.

Model 8513 is the wide carriage version with the added features of 132 column printing at 10 cpi, as well as condensed and enlarged characters, plus it has bottom paper feed capability when the tractor option is used.

Both models utilize bi-directional logic seeking printheads with an expected life of 100 million characters. Plus, a 9 x 9 character matrix with true descenders, bit image and block graphics, and numerous type fonts.

Printer control boards which acept Centronics parallel input are available for each model. Star controllers allow full use of the DP-858/8513 mechanism features. And if you need to customize further, we'll help you design your own control board.

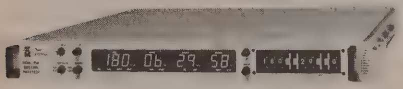
Timing Instruments 8500 Series



TIME CODE PROCESSOR MODEL 8500

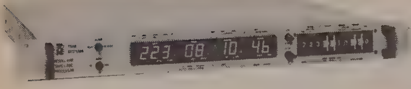
- MICROPROCESSOR CONTROLLED
- TRANSLATOR
- SYNCHRONIZED GENERATOR
- TAPE SEARCH AND CONTROL
- HOST COMPUTER I/O
- SINGLE RUGGEDIZED 1-3/4" UNIT
- HEARTBEAT CLOCK OPTION

The Model 8500 Time Code Processor is a full-function time code data processing instrument featuring both time code generation and time code translation functions under control of a built-in micro processor subsystem. The unit combines all of the best features of TRAK Systems' field proven time code instruments. Fully automatic search and control of a tape transport is a standard option. Included as a standard feature is a host computer interface providing for both remote setup and operation of the Model 8500 and for status output to the host computer. Available interfaces include RS-232, IEEE-488 and 16-bit/DR11C parallel. A unique battery-powered heartbeat clock option is also available. For high-precision timekeeping applications, an external frequency source and internal slew controls may be used to obtain microsecond accuracy. Optionally available are an internal tracking oscillator that may be locked to the external frequency source and an oven-controlled precision oscillator.

An internal clock continuously provides a serial time code output (normally IRIG B). The translator section of the instrument reads either an externally-supplied time code (XLATE mode) or the internal clock (GEN mode) and provides a variety of standard and optional code, rate, and parallel outputs. All outputs are phase locked to the input time code for playback ratios ranging from 1/32 to times 32 speed-up. The front-end code reader circuits feature wide dynamic amplitude and frequency range, full range search and playback, analog filtering, digital filtering, and errol bypass.

Automatic search and control is fully supervised by the internal microprocessor. With this approach, many features too complex to be implemented with hardware logic circuits are provided under program control.

The front panel parameter-setup system features a minimum number of controls to set up a full range of operating parameters (Start Time, Stop Time, modes, filter parameters, etc.). Operator feedback is provided by the front-panel display group. Default setup values are used to minimize setup complexity and time.



TIME CODE PROCESSOR MODEL 8510

- MICROPROCESOR CONTROLLED

- HOST COMPUTER I/O OPTION
- SINGLE RUGGEDIZED 1-3/4" UNIT

The Model 8510 Time Code Processor is a full-function time code data processing instrument featuring both time code generation and time code translation functions under control of a built-in microprocessor. Available as an optional feature is a host computer interface providing for both remote setup operation, and for status output to the host computer. Optional interfaces include RS-232, IEEE-488 and 16-bit/DR11C parallel. For high-precision timekeeping applications, an external frequency source and internal slew controls may be used to obtain microsecond accuracy. Optionally available are an internal tracking oscillator that may be locked to the external frequency souce and an oven-controlled precision oscillator.

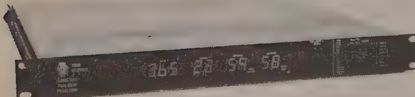
Operator feedback is provided by the front-panel display group. Default setup values are used to minimize setup complexity and time.



TIME CODE PROCESSOR MODEL 8520

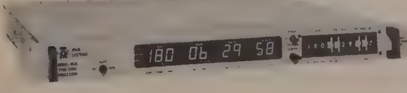
- READER/PRECISION TRANSLATOR
- AUTOMATIC FORWARD/REVERSE
- MULTICODE INPUT & OUTPUT
- AUTOMATIC ERROR BYPASS
- PHASE LOCKED LOOP

TRAK Systems' Model 8520 Time Code Processor combines a forward/reverse time code reader and a precision time code translator in a single instrument. Precision translation with all outputs phase locked to the input time code is provided for playback ratios between 1/64 and 32 times speed-up. Forward/reverse time code reading is provided over the frequency range of 30 Hz to 1 MHz. The front-end code reader circuits feature wide dynamic amplitude and frequency range, full-range analog filtering, digital filtering, and error bypass.

A variety of multicode input options are offered. Included are IRIG family, NSA family, NASA 36-Bit, and combinations of these codes.

For controlled playback ratios, input filter frequency selection for each selected code is automatic. For example, when IRIG B (1 KHz carrier) is played back at a 2:1 speed-up ratio, a 2 KHz filter is selected. For high speed playback (beyond 32:1 speed-up) four filter frequencies between 160 KHz and 1 MHz may be manually selected.

The Model 8520 has standard rate outputs of 1, 10, 100, and 1000 PPS on BNC connectors and parallel BCD outputs of hundreds-microseconds through hundreds-days on a multipin connector. Included in the BCD output connector are 1 PPS, 1K PPS, and 10K PPS delayed strobes. The instrument may also be ordered with a variety of special rate, parallel, and code outputs. All commonly used parallel binary codes, are available. A Universal Computer Interface (UCOI) option features a freeze buffer and word-length selection of 4, 8, or 16 bits.



TIME CODE GENERATOR MODEL 8530

- MICROPROCESSOR CONTROLLED
- HOST COMPUTER I/O
- MICROSYNCHRONIZATION
- FULL THUMBWHEEL PRESET

The Model 8530 Time Code Generator is a microprocessor-supervised unit incorporating all of the features required of a precision time generating instrument. The unit is designed to operate from a precision external frequency standard and may be ordered with one of several optional internal oscillators. Automatic start from a WWV tick or an external start pulse is provided. Slew and propagation delay controls are provided to permit synchronization to within one microsecond of an external time standard. Included as a standard feature is host computer I/O providing for remote setup, status monitoring, and time data output from Model 8530. Available interfaces include RS-232, IEEE-488, and 16-bit/DR11C parallel.

TRAK Systems' Model 8394 Time Code Translator/Generator incorporates all of the features required in a time code generating instrument and can be ordered with a variety of time code and rate outputs. The unit is designed to operate from a precision external frequency standard and may be optionally ordered with a high-stability internal oscillator. In the Generate mode, the unit may be manually synchronized with either a WWV transmission or an external start pulse.

When synchronizing with WWV, only the front-panel ON TIME indicator and SLEW controls are needed to maintain the outputs to within one millisecond of WWV. With an external atomic frequency standard, outputs are maintained to within 0.5 microseconds of the synchronizing source. Parallel and rate signal output coherence is 50 nanoseconds or less and serial code coherence is 200 nanoseconds or less.

In the Translate mode, the Model 8394 fully synchronizes to a serial time code (normally IRIG B) input, and is designed for operation with time codes having a frequency precision close to the time base being used for internal clocking. For operation with less-precise sources (such as tape recorders), a code-lock option is available.

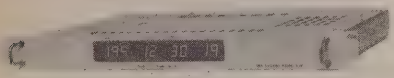
- HIGH-INTENSITY LED DISPLAY
- PLUG-IN CIRCUITS FOR EASE OF MAINTENANCE
- 115 OR 230 VAC OPERATION (RFI FILTERED)

TRAK Systems' Model 8395 reads serial time code outputs from time code generators or tape reproducters, displays time in days, hours, minutes, and seconds, and optionally provides serial and parallel outputs to other equipment. The Model 8395 may be ordered to read all commonly used time codes and with multiple-code inputs. The Model 8395 is also ideal as a remote display in systems where the cost of long multi-conductor cables is prohibitive.

TIME CODE GENERATOR/READER MODEL 8396

- TWO INSTRUMENTS IN ONE
- AUTOMATIC ERROR BYPASS
- READS DISTORTED CODES
- HIGH-INTENSITY LED DISPLAY
- PLUG-IN CIRCUITS

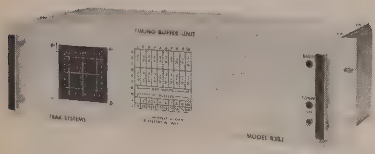
TRAK Systems' Model 8396 Time Code Generator/Reader functions either as a time code generator or as a time code reader. In the Generate mode, the Model 8396 may be used to record a time code, and in the Read mode, time may be read from tape at on-line and fast forward speeds. In the standard configuration, the unit generates and reads IRIG B in days, hours, minutes, and seconds. A unique error bypass circuit allows the unit to produce correct and coherent outputs for any number of frames containing coding errors. Reliable reading is assured by power line and signal input filtering, error bypass circuits, and a decoder which reads through single-cycle dropouts and extra pulses on coded bits.



TIME CODE TRANSLATOR MODEL 8397

- AUTOMATIC ERROR BYPASS
- PHASE LOCKS TO CODE
- HIGH-INTENSITY LED DISPLAY
- PLUG-IN CIRCUITS

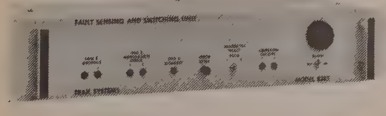
TRAK Systems' Model 8397 Time Code Translator provides precision translation of serial time code inputs from range devices and instrumentation tape recorders. The Model 8397 can be ordered with up to three serial time code outputs and/or a variety of parallel and rate outputs. A code-lock circuit phase locks the instrument to the carrier frequency of the incoming code to assure precision translation.



TIMING BUFFER UNIT MODEL 8383C

- REPLACEABLE PC ASSEMBLIES
- UP TO 40 SERIAL OR 120 PARALLEL OUTPUTS
- DC TO 5 MHz SERIAL CHANNELS
- SINGLE & DIFFERENTIAL PARALLEL CHANNELS
- OPTIONAL PATCHBOARDS

TRAK Systems' Model 8383C Timing Buffer Unit accepts time code and rate inputs and provides multiple outputs capable of driving long lines and low impedance loads. Typically, voltage gain is unity or less. This unit is designed to meet the requirements of timing systems having a moderate number of serial time code, rate, and parallel outputs. Space is provided for up to four buffer card assemblies, with each assembly having 10 linear buffers or 30 TTL buffers. Combinations of linear and TTL driver cards may be ordered. A variety of patching variations are available using the optional 100-position patchboard or by fixed internal programming.



FAULT SENSING/SWITCHING UNIT MODEL 8385

- TRIPLE-REDUNDANT SENSING
- AUTOMATIC SOURCE SENSING
- FAILSAFE DETECTORS AND POWER SUPPLY
- FAULT ISOLATION INDICATORS

TRAK Systems' Model 8385 Fault Sensing/Switching Unit (FSSU) accepts time code and rate inputs from three time code generating sources (TCG A, TCG B, and TCG C), compares these inputs, and provides a single set of outputs from TCG A or TCG B. TCG A normally provides the outputs, with TCG B providing a backup in the event of TCG A failures: TCG C provides the capability to isolate signal and phase disagreements to a specific souce (TCG A, TCG B, or TCG C) and to automatically switch from TCG A to TCG B in the event of a failure. All signal disagreements and dropouts are individually indicated on front panel lamps and a common audible alarm sounds for any fault.

To assure proper fault sensing even when one source has failed, all signals critical to signal comparison are derived from voting circuits having inputs from all three sources.

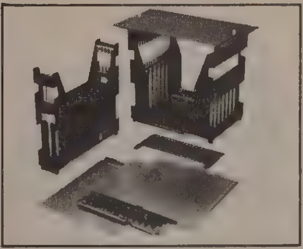
DOUBLE HEIGHT

CAGE AND CARD SYSTEMS.

The Electronic Solutions 2X Multibus system uses 12x12 inch cards, offering double the useful circuit area of a standard size card. Or even more than double, considering the bus interface "overhead" on each card.

Double Height cards are particularly useful for batch I/O processing, configured with the I/O ports and memory on the same card. An on-board μC can process large blocks of data without the delays of bus arbitration and data transfer.



CARD CAGES

All card cages and rack mounting card cages are available in double height versions. Add "2X" before model number.

CARD CAGES

VMEasy™

Electronic Solutions VME cages are ideal for system development and OEM applications. It's easy to match OEM mounting configurations, since each card cage can be mounted on the bottom or any side. Unique center adapters convert double size slots into two single size slots, making it easy to configure systems with both slot sizes.

Electronic Solutions' single size VME card cages are ideal for I/O expansion applications in VME systems, as well as for complete single size VME or Eurocard systems.

All cages are constructed of sturdy, durable anodized aluminum with a single mother board backplane for the VME bus and separate connectors for the I/O channel. Fans and fan mounting hardware are available for each cage.

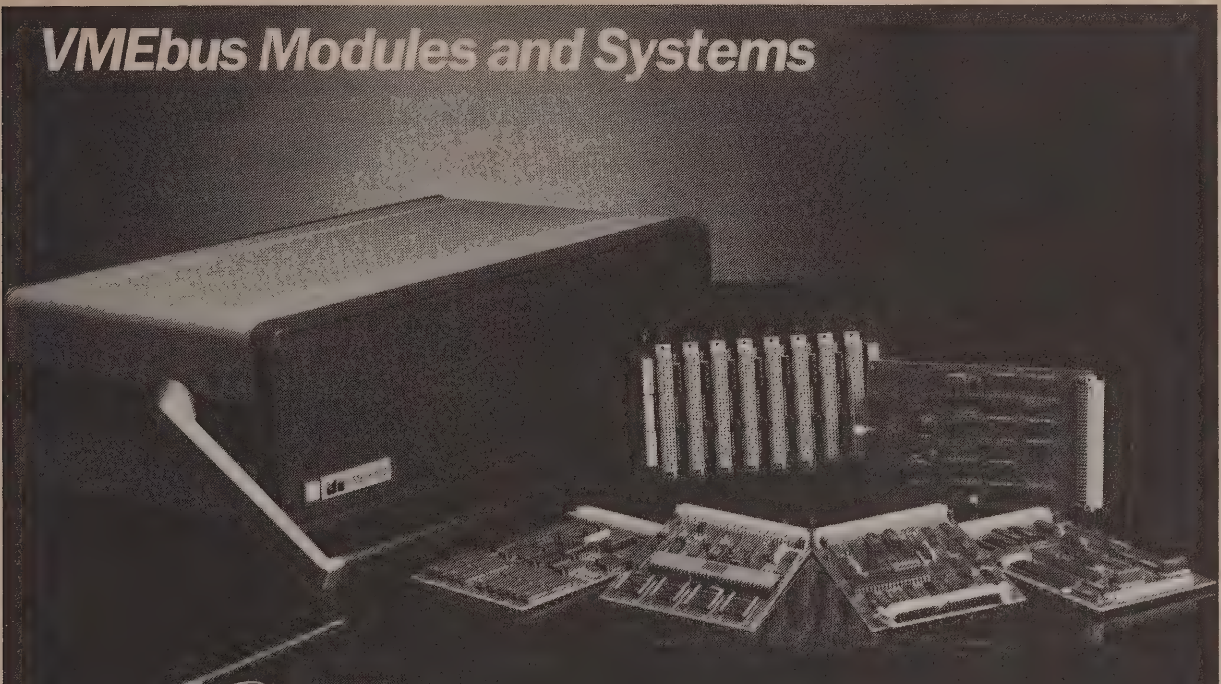
VMEbus Modules and Systems



Hit the ground running

Designing a VMEbus system? In just 48 hours you can have Mizar's proven VMEbus modules and software development systems for evaluation. In just 5 weeks we will deliver production quantities.

Single Height Modules

Powerful 16-bit single height modules (100mm x 160mm) are easy to package and inexpensive. Performing a single function on each board, these modules can be assembled to "tailor make" your system without incurring the expense of features neither used nor desired.
A complete selection of modules includes a system controller, motherboard, two CPU modules, 128K byte RAM, byte wide memory, quad serial port, quad parallel port, counter-timer module, real time clock, floppy disk controller, SCSI interface, GPIB interface, GPIB TLC with DMA interface, analog input module, analog output module and video controller module.

Double Height Modules

These larger size modules (233mm x 160mm) allow more functions per board, giving you the capability of implementing a high performance computer system configured to the user's needs. Performance is improved because fewer bus accesses are needed. Call Mizar for double height VMEbus modules including a 68010 CPU module with serial and parallel ports. EPROM sockets, dual ported dynamic RAM and system controller functions, a 1 Mbyte dynamic RAM module, a Winchester and floppy disk controller, CMOS battery-backed RAM, Dual Channel GPIB Controller and a graphics module offering 3 planes of display memory with 1024 by 1024 resolution.

MICROCOMPUTER PRODUCTS

VME/10 Microcomputer System

The VME/10 is a new desktop microcomputer that is among the most advanced and capable 16/32-bit desktop systems available. The system is intended for three specific markets.

1) for OEMs for scientific, engineering, laboratory and industrial microcomputer needs — including instrumentation control, data acquisition/analysis and communications.

2) for system integrators requiring a powerful basic microcomputer that will accept the appropriate add-on modules to customize it for their specific system application.

3) for system OEMs who require a complete development system for 8/16/32-bit systems.

The VME/10 Microcomputer is powered by the MC68010 MPU. Its full 16-bit data bus, 32-bit internal architecture, and powerful instruction set make it the highest performance, yet easiest to use microprocessor in the industry. Coupling the MC68010 with the MC68451 Memory Management Unit (MMU) permits several concurrent development tasks — editing, program development, system debugging — with full protection for each task. This fundamental processor/memory architect also provides the features required in multitasking OEM systems where security and protection of both data and programs are essential.

Much of the VME/10 appeal is based on its adherence to P1014/VMEbus standards, which are being widely adopted as an international standard for machines with 8-bit to 16-bit capabilities. In the VME/10 System, the VMEbus is supported by an additional I/O Channel, an architectural element that increases the speed of multiprocessor applications by relieving the VMEbus of the time-consuming tasks of servicing local peripherals. Using the built-in expandability features of the VME/10, up to nine additional modules may be added to tailor the system for your specific end use, utilizing the VMEmodules and I/Omodules for instant implementation.

MOTOROLA
VME/10

The basic VME/10 Microcomputer System consists of three interconnected physical elements — the Systems Control Unit, the Keyboard and the 15-inch display unit. The System Control Unit is the basic source of the flexibility and expansion capabilities of the system. It contains a System Control Module (together with VMEbus and I/O Channel interface circuits), a 5, 15, or 40 MB fully formatted floppy disk drive, and a chassis (with power supply) that permits system expansion. The VME/10 System also includes the VERSAdos Real-Time, Multi-Tasking Operating System and optionally System V/68 Operating System.

SYSTEM V/68 Operating System

Motorola's SYSTEM V/68 Operating System is the standard UNIX-derived Operating System for the M68000 Microprocessor Family. SYSTEM V/68 is derived from AT&T Technologies' UNIX V; it is the generic M68000 port. This powerful operating system contains all system calls, commands and utilities included in AT&T Technologies' UNIX System V Operating System, except those features dependent upon hardware not supported by Motorola. It offers a small compact kernel, which provides process scheduling and I/O facilities to all programs. In addition, a powerful command shell for interactive system controls and an extensive set of utility programs for many tasks, such as program development, text processing, electronic mail, and networking support are included.

In addition to the SYSTEM V/68 Operating System Software several unique features can be added to enhance its usefulness as a host operating system for the EXORmacs and VME/10 Systems. These additional features include a Pascal Optimizing Compiler, UNIX-to VERSAdos tool kit and support software for the HDS-400 Hardware/Software Development Station.

M68000
SYSTEM V/68

To enhance the value of the SYSTEM V/68 Operating System to the customer, Motorola offers a total support package to SYSTEM V/68 users. Included in this package is a problem reporting system, software and documentation update service, a product support newsletter and a toll-free "hotline." Additionally, specialized consultant services will be offered on a contract basis.

VMEmodules

VMEmodules from Motorola incorporate the high performance MC68000, the internationally accepted Eurocard format, the defacto industry standard 16-bit VMEbus, and the new and flexible I/O Channel, all combined in the most versatile and latest state-of-the-art approach to the modular systems concept.

The MC68000 MPU

You've seen the benchmarks, and the results — MC68000 has emerged as the acknowledged microprocessor leader in the 16-/32-bit performance class. Its architecture is designed for optimal support of the latest high-level languages, and it directly addresses 16 Megabytes of memory (instead of one Megabyte for most of the competition). Its 32-bit internal features mean easy growth to full 32-bit capability as your needs grow into the future. VMEmodule products put the MC68000 MPU to work in a modular structure that has achieved worldwide acceptance and support, both by users and manufacturers of microcomputer subsystems.

Eurocard Format — Developed as the standard in Europe, this card format is gaining worldwide acceptance in modular applications in a broad range of engineering, laboratory, and industrial automation environments. Available in both single (160 x 100mm) and double sized (160 x 233.4mm) formats and card cages, they offer a convenient size, plus the two 96-pin/socket bus connectors provide an extra margin of reliability.

8-/16-/32-Bit VMEbus — The VMEbus does not limit designers to today's technologies; its inherent flexibility and capabilities allow adaptation to any number or types of popular processors for true multi-processing applications. It allows mixing of as many bus masters as your system may desire. The VMEbus enables mixing of 8-, 16-, or 32-bit processors in the VME backplane, operating at high speeds, asynchronously, and providing seven interrupts and four levels of bus priority arbitration.

RMS68K and VERSAdos Software Support — VMEmodule products are designed for accurate response to multiple random events. The RMS68K Real-Time Multi-Tasking Executive software for the VMEmodule Monoboard Microcomputer provides a nucleus for real-time applications. Where large data files and mass storage resources are required, the VERSAdos Operating System provides efficient execution.

Multiple Worldwide Sources — Development of the VMEbus represents the combined technical efforts of Motorola and a number of other major international electronics companies (Signetics/Philips, and Mostek for example). The original participants are being joined by an increasing number of companies supplying compatible products. These sources are united by the VMEbus Manufacturer's Group Meeting four times each year to ensure continued compatibility from a diversified list of suppliers.

VERSAmodules

VERSAmodule circuit boards are microcomputer building blocks from Motorola, based on the state-of-the-art 16-bit MC68000 Microprocessor. They are part of a family of modular building block products that provide the system designer ready-to-run hardware and software. VERSAmodule building blocks drastically reduce the total cost of bringing together a fully configured custom microcomputer-based system . . . by saving development time, engineering talent, and money as well.

With VERSAmodule products, you minimize the risks of design limitations and system obsolescence while keeping your system tied to the leading edge of technology. Your system is built around the most advanced 16-bit microcomputer available today . . . incorporating sophisticated architectural features to enhance system performance. The full range of available software products and applications development tools assure early system completion. And Motorola's experienced support staff is available to help, any time.

Most Advanced 16-Bit — The VERSAmodule Monoboard Microcomputers are the most powerful and versatile 16-bit single-board microcomputers available. They achieve a higher degree of computing power, memory capacity and tailorability by combining the MC68000 MPU with other on-board features. Such on-board features as I/O Channel interface, VERSAbus interface, bus arbitration logic, dual port RAM, multiprotocol serial I/O, parallel I/O, programmable timer/counters, and RAM with battery back-up capability enable these VERSAmodule Monoboards to handle applications ranging from those using a single processor through those requiring complex multiprocessing structures.

VERSAbus Architecture — VERSAmodule boards are interconnected in a system using the VERSAbus interconnect standard. The high-speed VERSAbus interconnect is characterized by asynchronous operation supporting direct memory addressing and true multiprocessor operation. Unlike other popular bus structures, VERSAbus architecture does not limit the number or types of processors that can be used in multiprocessing applications. The number of "bus masters" or main processor boards is limited only by the number of card slots in the particular VERSAbus backplane being used. Furthermore, several lines within the VERSAbus structure enhance system reliability and integrity by providing for efficient self-diagnosis . . . resulting in minimum system downtime.

I/O Channel — The I/O Channel is an advanced architectural feature of VERSAmodule Systems that allows greater system flexibility and low incremental cost for I/O expansion. The I/O Channel has a 12-bit address bus, 8-bit bidirectional data bus, 4K Bytes of memory-mapped I/O, and a data transfer rate of up to 2 Megabytes per second.

Modular DC-Motor Motion System for Microcomputers

EASYMOVER

Installed in popular microcomputer, EASYMOVER is a sophisticated machine-language program for full position control of DC motors coupled to a position encoder. Designed specifically for TSP's Model 1000/1100/1400 Actuators, EASYMOVER works through a Motor Driver Board installed in the computer's expansion slot. EASYMOVER links to BASIC, FORTRAN, or PASCAL to transmit motion commands and receive position/status information by calling various subroutines such as EZGO, EZPOS, EZSTATUS, EZPAUSE, EZJOG, EZDEF.

With EASYMOVER and the Motor Driver Board controlling the motions in the background, the computer is free to perform other machine control tasks such as: Activate relays; Acquire data from machine transducers; Perform statistical calculations on acquired data; Manage operator display screens; Manage peripherals; Communicate with host computers.

(Example of typical EASYMOVER program segment.)

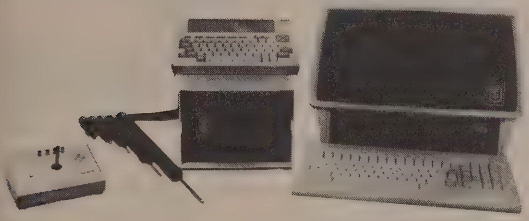
"EASYMOVER" SOFTWARE

- For S-100, IBM PC, APPLE II.
- Links to BASIC, FORTRAN, PASCAL
- Simple motion commands.
- Full position servo
- Automatic backlash compensation



"SMARTBOX" INTERFACE

- RS-232C/IEEE-488 Interface.
- Acts like a printer peripheral.
- Low-cost, modular.
- Automatic backlash compensation.
- Internal power supply.
- Internal mini-motion program storage.
- Built-in vectorial motion option.

SMARTBOX

CONTROL2 "SMARTBOX" manages motions of DC motors with incremental encoders as feedback elements. It is a low-cost modular interface permitting any computer to Control 2, 4, or 6 axes of either TSP's precision linear and rotary Actuators or any servo-controlled DC motor with encoder position feedback. In addition, TSP offers a velocity servo for DC motors requiring up to 5 amps.

CONTROL2 simultaneously controls 6-axes of independent motion while assimilating simultaneous commands via both the parallel IEEE-488 and serial RS-232C communications ports. In addition, CONTROL2 can be controlled by a variety of low-cost briefcase-sized portable computers.

CONTROL2 operates much like a CNC controller. Several models have internal memory for storing simple motion programs to free the host computer from monitoring repetitive motions. If you can use a printer on your computer, you can use the CONTROL2 "SMARTBOX."

Proportional rate control of such operations as slewing in motors, setting fire control systems, controling cursor movement on computer display terminals and other types of positioning in X & Y coordinates are some applications of Bowmars Joysticks.

Deflection of handle in either the X or Y directions results in corresponding rotation of output means, which could be Potentiometers, Pulse Generators, Encoders or Synchros.

Special Bowmar Joysticks incorporating a third (Z) axis can be designed to meet special requirements.

The Joysticks may be specified either self centering or non self centering and may or may not have a "dead man" thumb switch on top of the handle specified. Joysticks may be specified with detent switches for "Axis Recognition" of position of handle.

The units are designed to withstand military environmental conditions of shock and vibration and operate in a temperature range of -30°C to +71°C.

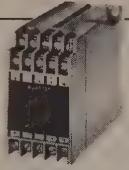
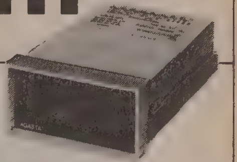
AGASTAT® SOLID-STATE TIME-DELAY RELAYS...

DSC Surface mount

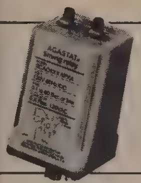


DIGITAL QUARTZ TIMER/COUNTERS

Employ microcomputer and digital-timing technology to provide every essential TDR function in a single compact unit with unprecedented accuracy and stability. Solid-state pulse-counting circuit. Crystal-controlled pulse-generator. Thumbwheel switches set delay. 4-digit optional display shows time remaining or counting progress. Six timing, five counting modes and four timing ranges field-selectable. Instantaneous plus timed 10 amp. output relays.



DPC Panel mount



SCA

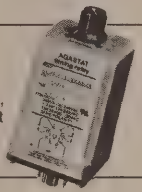
Series SCA provide dual timing ranges, field-convertible from seconds to minutes, and AC/DC operation with reverse-polarity protection, plus "Coarse" and "Fine" delay-setting knobs.

SRC

Series SRC are repeat-cycle timers for applications requiring high-accuracy repetitive ON/OFF cycles of independently variable durations, permitting industrial-control designers to simplify and cost-reduce their systems.

SCB

Series SCB may be used directly, without external contactors, to control solenoids and other inductive loads to 345 VA at 120 VAC, meeting a broad range of industrial requirements.

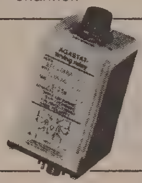


SSA

Series SSA use MSI-chip IC logic to achieve the highest reliability and long-term accuracy in its moderate price class. Fits in a single space on a standard 300V machine-tool relay channel.

SCC

Series SCC with mating socket (supplied) are UL-listed under Standard 508 (Ind'l. Control Equip.) for "pilot duty" in the Auxiliary Devices category (the most stringent) whether field or factory wired.



SSC

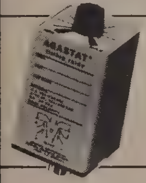
Series SSC are highly reliable TDRs with transient protection circuitry that achieves exceptional immunity to noise and transients. These low-cost TDRs combine premium components with high-quality workmanship.

SCD

Premium quality in one of the lowest-cost timers in their class. UL-recognized, available for on-delay or interval timing applications, with DPDT load switching.

STA

Series STA provide all of the performance features of the UL-Listed Series SCC plus maximum contact density. They occupy 1/3 less panel space than most solid-state TDR's and plug into popular tab-style sockets.



SCE

Features "True off-Delay" timing, with no operating voltage required during the timing cycle, with delays up to ten minutes and competitive pricing.

VTM-1

Model VTM-1 is a compact in-line timing module of exceptional simplicity and unprecedented application flexibility. Wired in series in a load circuit, it will control inductive loads of up to 1A, RMS or DC at power circuit voltages from 24V to 240V RMS AC or DC.

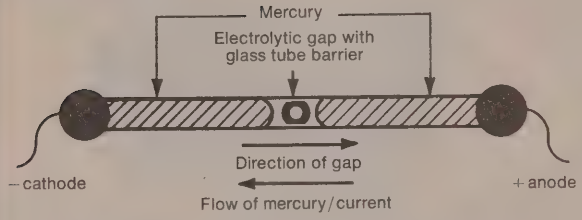
CURTIS

ANALOG ELAPSED TIME INDICATORS

Smallest-size, Lightest-weight, Lowest-cost AC or DC at any Voltage

HOW THEY WORK



Two columns of mercury in a capillary glass tube separated by an electrolytic gap containing a barrier of glass tube. In the presence of pure or pulsed DC signal at the terminals, mercury electrochemically crosses the gap at a time rate proportional to the current. The gap travels the tube's length as a function of the current-time integral.

TYPICAL APPLICATIONS FOR CURTIS

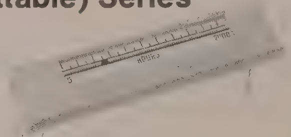
WARRANTY & P/M SCHEDULING—Provides a low-cost means of monitoring actual use time of equipment.

RELIABILITY ENGINEERING—Provides MTBF data or subsystem replacement-time data without costly, unreliable logging.

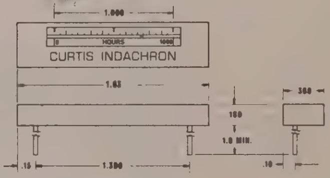
TEST EQUIPMENT UTILIZATION/CALIBRATION—Provides utilization data for savings in capital investment for test instruments, tools, etc., as well as a means for calibration scheduling.

LNA & LC (non-resettable) Series

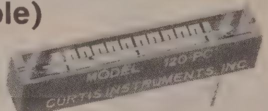
CURTIS
520-LNA



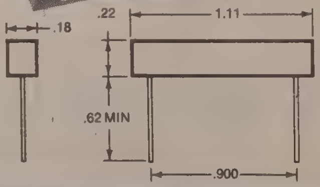
Easily-readable, very low-cost units used by OEM for warranty-by-use and P/M scheduling in office equipment, test instruments, etc. AC and DC with various time scales and electrical ratings. LNAs are adhesive-mounted, LCs via circuit board pins.



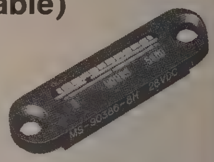
120PC (non-resettable) Series



Specially designed with circuit board pins for PC cards, components and subassemblies, 120PCs are totally encapsulated in epoxy for optimum reliability. Run from DC current with customer-supplied series resistor to achieve desired time frame.



620PC, 620N (non-resettable) MIL Series



CURTIS MIL spec units in two configurations: 620Ns meet MS-90386 and are provided with voltages available in the box—5VDC—as well as 28VDC and 115 VAC. 620PCs meet MS-3311 (AS), are designed for repairable modules and subassemblies, and run from DC current.

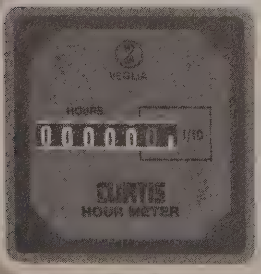
CP3 (resettable) Series

Instantly resettable in the field, CP3s are suitable for P/M scheduling, e.g., contract field servicing of equipment, replacement of life-limited components. Scales for any type of scheduling. Available in AC and DC.

STARTING 1984—
CURTIS' ARE UNSHOCKABLE

After 23 years of use-time monitoring for warranties, P/M scheduling, MTBF testing, etc., CURTIS Analog ETIs have come of age. *No longer vulnerable to careless handling.* Gap loss due to carelessness in shipping, receiving and stocking is prevented.

NEW AC & QUARTZ DC CURTIS VEGLIA HOUR METERS



AC units employ a high-efficiency, low-power synchronous motor for low-power consumption and instantaneous response with no rundown error. Low voltage 6V and 12V units reduce shock hazard. Also 24V and 115V, 230V units, all UL listed.

Quartz DC units employ electronic quartz circuitry for fail-proof operation and instantaneous response with no rundown error. When possible, use of DC, rather than AC, hour meters facilitates monitoring of actual use time rather than simply power-on time. Permits standardization on one meter without concern for voltage or frequency when product is exported.

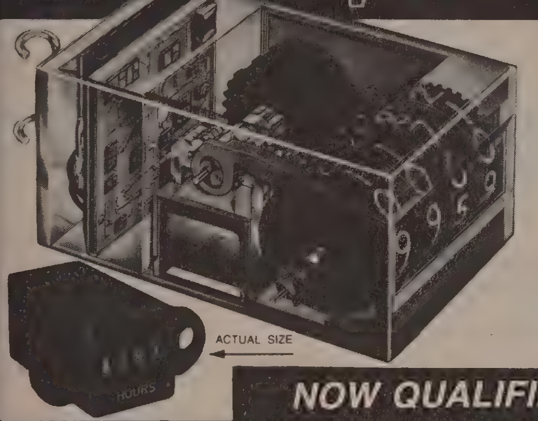
THE DYNATIME Series



SUBMINIATURE ELAPSED TIME INDICATORS

The NEW INDUSTRY STANDARD in ETI technology . . . with CMOS microelectronics that delivers precisely controlled power to the patented stepper drive module. Summarily, a remarkably efficient system that has proven its versatility. For example, Models D76 and TTL-compatible D46 are proven performers from logic buss or low-voltage DC power. Or take advantage of Model D16's stability between 10 and 34 VDC. It is now qualified to new MIL-M-7793E, as is the down-sized 60 Hz Model D92. All are POWER MISERS, with expanded voltages to match today's tougher equipment specs. And the SHORT CASES will SAVE SPACE, too. That's DYNATIME versatility . . . you can rely on it.

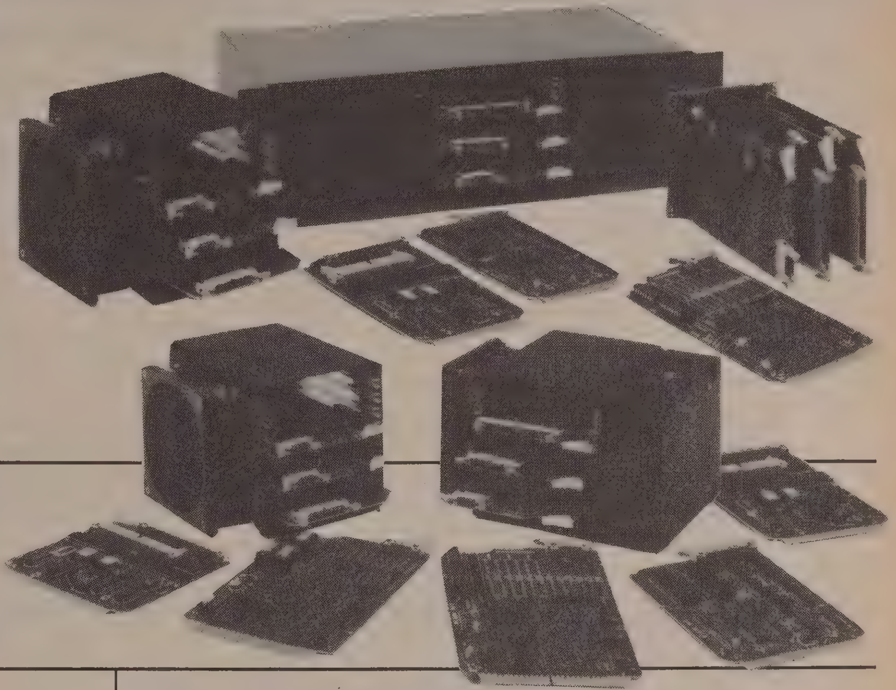
STD BUS MODULES FOR INDUSTRIAL AUTOMATION

The STD BUS is used by over 100 card manufacturers to standardize the physical and electrical aspects of 8-bit microprocessor systems. The bus is dedicated to internal communications; all external communications are through I/O interface connectors on the outer edge of the card. The STD BUS is used for both independent devices and as an I/O subsystem for larger computers.

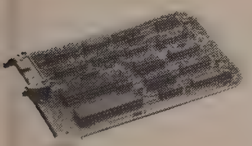
Ideally suited for factory automation in many industries, benefits provided by the STD BUS include:

- Modularity by function and physical specification
- Card slot independence
- Separate buses for power, data address and control signal

Renco Corporation offers the industrial automation engineer a wide selection of STD BUS card modules and accessories which include: Quad 12-bit digital-to-analog convertors; Quad TTL encoder interface; communications interface with IEEE-488, RS-232 and parallel I/O; intelligent servo control. Additional motion control related modules and systems are soon to be released.



STD BUS SERIES RSTD-ENCODE4 QUAD ENCODER INPUT



FEATURES

- Full STD BUS compatibility
- Four 16-bit or two 32-bit counters
- X1, X2, or X4 encoder count multiplier
- Direction sensing
- Error detection
- Binary or BCD counting
- Count rates up to 2 MHz
- Time of day clock option
- 5 volt operation
- Switch selectable addressing

The RSTD-ENCODE4 provides direction sensing and error detection for up to four quadrature encoder signals. Count rate may be 1, 2, or 4 times the encoder line count, software selectable or jumpered. Separate 16-bit count registers are provided for forward and reverse counts of each encoder.

TTL input signals may be strobed with the system clock, or an optional crystal oscillator may be used to obtain clock rates up to 5 MHz. When using three encoders, the unused count registers may be configured as a time of day clock.

STD BUS SERIES RSTD-DAC4 QUAD DIGITAL TO ANALOG CONVERTER

CSI synchro/resolver/inductosyn™ to digital converters

GENERAL DATA

The series 168 is a family of "type II" tracking converters which feature no velocity error and only minor acceleration errors. Their high input impedance and inherent noise immunity insure trouble-free system integration. Converters will operate with sine or square wave inputs with no degradation in performance.

No cost options include user selectable input voltages from 3 to 130 volts rms, a variety of logic types, dc output proportional to velocity and nonstandard tracking rates. Most 12 and 16-bit models may also be ordered with carry/borrow and/or up/down outputs for multiturn operation.

GENERAL

The DIO-REY 820 Series Serial to Parallel and Parallel to Seriel Converters are microprocessor based and are primarily intended for driving remote display decoders.

RECEIVER: The input to the 820 Receiver is a Serial ASCII coded data stream at either RS232 or current loop levels. The 820 Receiver automatically adapts itself to incoming data rates over the range of 110 to 1200 baud. Fixed baud models are available for data rates of 1200 thru 9600. In addition, it features a six position DIP switch which allows selective addressing of up to 64 separate receivers on one data link. The output of the receiver is six bits of data and sixteen strobe lines. The receiver, therefore, can drive either sixteen numeric or alphanumeric characters per receiver or up to 96 points in an annunciator system. Input power is 100ma at 8 to 12 volts, unregulated but filtered (an on-board regulator is provided). Input connections are via terminal strip; Outputs are through a 50 pin header (signals with alternating grounds).

TRANSMITTER: The 820-7/8 Transmitter accepts parallel, 7-bit ASCII (monocase) and converts it into a serial data format (RS232 or current loop) compatible with the receiver. Alternately an array of sixteen, 6-bit registers may be sequentially inputed to the 820-3/4A Transmitter and converted to the same serial output, for annunciator systems. In either transmitter, the data rate is DIP switch selectable from 110 to 1200 baud and the address is fixed at 00.

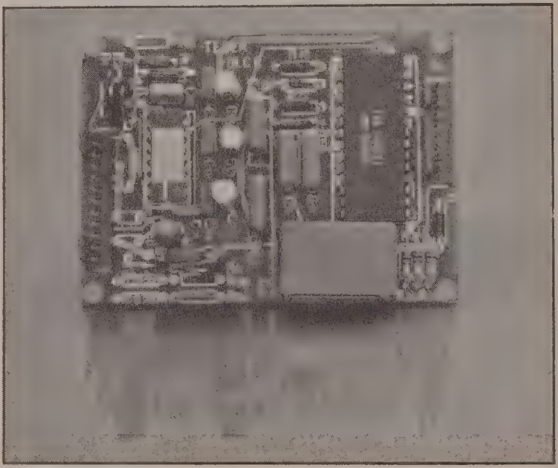
PROBLEM: Reliable, Stable, High Resolution Analog to Digital Conversion for Your Transducer at an Affordable Price

SOLVED



FEATURES

- Single power supply accommodates both the DLCC and the transducer it serves
- Resolution, adjustable, up to ± 1 count in 40,000
- Non-linearity: 0.01%
- Stable through a wide range of temperature changes:
  - — Zero Stability 0.005%/°C
  - — Span Stability 0.001%/°C
- Useable with any wheatstone bridge type transducer whose output ranges to 5.25 mV/V full scale
- Serial and multiplexed parallel outputs
- Ratiometric measurement method

The DLCC-LSI is a state of the art electronic unit which is the only link necessary between your transducer and a microprocessor. Combining sophisticated design with simple installation, the DLCC can accommodate either single or multiple transducers. It converts the inherently low transducer output into a digital signal of approximately 32,000 counts.

The DLCC operates ratiometrically. Thus, it requires only a single inexpensive 12 VDC low-current power supply to serve both its own power needs and those of the transducer.

Both the output of the DLCC (at zero input) and its span are factory adjusted: the zero to approximately −16,500 counts, and the span for net 30,000 counts at 2 mV/V signal. This output is provided in two digital formats: pulsed stream serial output, and multiplexed BCD parallel output. Zero adjustment and span adjustment can be carried out quite simply by the user.

MODEL 810 TEST-BENCH THERMO-PROBE

Puts exact heat where you want it for your IC tests

Model 810 Thermo-Probe lets you heat-test integrated circuit components with constant ease and accuracy. No ovens; no heat chambers. Everything's out in the open, where you're in control, where you can prevent damage to circuitry.

With Thermo-Probe you apply heat that is ±2°C accurate — or better — to integrated circuits, diodes, resistors, capacitors, and transistors, or any other kinds of components. You pinpoint heat-drift and thermo-electric problems. In just 60 seconds you have precise heat from +25 to +250°C right on your test bench.

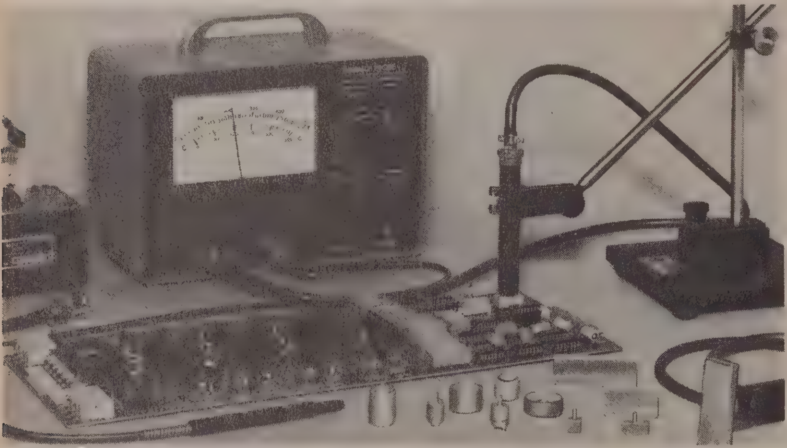
A reliable solid-state controller continuously monitors the probe temperature and regulates it to your setting on the control knob. You monitor the feedback circuit right on the direct-reading 4 x 4½-inch pyrometer. This analog readout lets you fine-tune the tip temperature when there's a difference between it and the overall probe.

The meter, by the way, has a shunt across the terminals to protect the instrument in transit, or any time there's no probe in place.

A separate thermocouple circuit can be used to read temperatures at the heat probe tip or at any spot along the thermal path. Or it can be used simply as a separate temperature-reading tool.

Tips are available for nearly any electronic component. Custom tips can be supplied to meet your special requirements.

All probes and tips are ordered separately.



SPECIFICATIONS: MODEL 810 THERMO-PROBE

AVAILABLE PROBES; C8229A (9 watt) and C8230A (35 watt). TC831 thermocouple sensing probe.

PROBE TEMPERATURE: +25 to +250°C.

ACCURACY: ± 2° Centigrade or better.

ELECTRICAL: 9 or 35 watts, 120 volts AC. (240V on request.)

CASE SIZE: 5 inches high, 6 inches wide, 9 inches deep (127.0 x 152.4 x 228.6 mm).

SHIPPING WEIGHT: 9 pounds (4.082 kg).

MODELS 35B & 35AB PRODUCTION-LINE THERMO-PROBES

Heat-test integrated circuits without production slowdown

Now you can heat-test semiconductor and individual electronic components right on the production line. And you can do it without expensive, cumbersome ovens or heat chambers.

Thermo-Probe — Model 35B or 35AB — puts heat where you want it, right now. And it does so without risking oven-heat damage to expensive components.

Let Thermo-Probe go to work for you. Apply heat that is ±2°C accurate — or better — direct to integrated circuits, diodes, resistors, capacitors, and transistors to pinpoint heat-drift and thermo-electric problems. You now have accurate heat from +25 to +225°C (Model 35AB) right on your bench.

A reliable solid-state controller continuously monitors the probe temperature and regulates it to the temperature you set on the control knob. It takes no more than 60 seconds to bring the probe to this setting from ambient temperature (for Model 35AB; 40 seconds for 35B).

Tips are available for nearly any electronic component. Custom tips can be supplied to meet your special requirements.

All probes and tips are ordered separately.

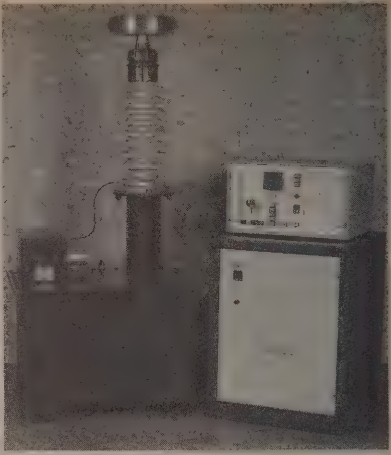
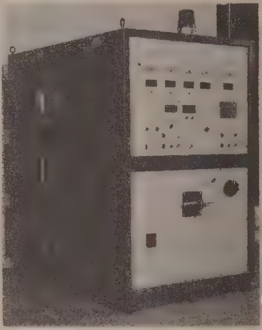
AMERICAN HV TEST SYSTEMS manufactures a complete line of high voltage test equipment for testing in accordance with CSA, IEEE, NEMA, AEIC, IPCEA, ANSI, UL, ASTM, and other applicable standards. We are also the U.S. distributor for the high voltage test products of ASEA, Haefely, and Micafil, including large AC/DC test sets, impulse test sets, high voltage standard capacitors. Our commitment is to manufacture products of the highest quality which satisfy the needs of our customers. Technical excellence and innovation are our constant goals.



6100-30D

AC DIELECTRIC AND INSULATION TEST SETS. We offer four standard lines for AC dielectric and insulation testing of motors, cables, switchgear, transformers, bushings, capacitors, and so on, according to all applicable standards. Models are available from 3 to 300 kV and from 0.5 to 300 kVA. Each set is designed to provide optimum safety for the operator and the test object.

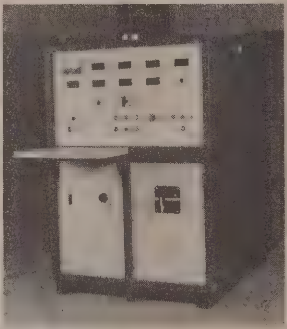


MTS 300

MTS 80-50D

AC and DC MOTOR TEST SETS. We offer a complete line of conservatively designed test sets for testing large, multi-horsepower AC motors, traction motors, and for other applications requiring a variable AC or DC power source. Standard models are available from 150 to 1000 kVA with output completely variable from zero to full voltage at taps up to 7200 volts. DC options are available to 750 V/400 A. We also offer MTS 80-50D for No Load start-up and testing of single-phase, poly-phase, and DC motors up to 200 hp.

TRANSFORMER TEST SETS. Power transformer test systems have been specifically designed for meeting test requirements and making measurements on single-phase and three-phase power transformers with ratings up to 50 MVA. We also manufacture TTS 155 specifically for testing three-phase distribution transformers with ratings from 75 to 2500 kVA and voltages up to 34.5 kV per ANSI C57. TTS 155 can also test single-phase distribution transformers with ratings from 10 to 500 kVA. Also available is TTS 17M, a roll-around unit designed for testing single-phase, pole- or pad-mount distribution transformers with ratings from 10 to 167 kVA.



TTS 155

1050 kV/3 A

RESONANT TEST SETS. We manufacture a complete line of AC Resonant Test Sets in both dead-tank and cascade designs. Output ratings are available up to 1500 kV and 6000 kVA. These sets offer distinct advantages over the conventional AC test transformer for testing capacitive type loads because of reduced input power requirements, corona-free operation, reduced size and weight, and the non-destructive nature of the test. We also offer a line of transportable resonant test sets with ratings up to 100 kV and 400 kVA for generator testing.

TTS 17M

We also manufacture DC Dielectric Test Sets, High-frequency Cable Aging Equipment, Load-Cycling Test Sets for Power Cables, Liquid Dielectric Test Sets, and Portable Megohmeters and Dielectric Test Sets.

PRECISION INSTRUMENTATION

SYNCHRO/AC RATIO/POWER SUPPLIES

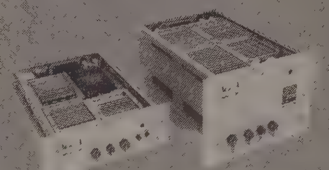
Programmable Ratio Transformer

Astrosystems Programmable Ratio Transformer Model #PRT101 provides from one to three independent ratio transformers in a single unit. Each of the ratio transformers provides 6 decades of voltage resolution with a range of zero to 1.099999. Typical ratio accuracy is better than 1 PPM. Voltage range is 0 to 130 volts AC for both inputs and outputs with a current rating of 500 ma.

Each ratio transformer can be connected with a common return or in the isolated mode. Output can be utilized in phase with the reference or 180° out of phase. A seven decade front panel LED readout is provided for each channel indicating programmed ratio.

The Programmable Ratio Transformer is designed for rack mounting with a 19" front panel and a panel height of 7". The unit features full Built-in Test (BIT) capability.

Programmable Synchro Simulators/Converters



Astrosystems programmable synchro units provide precision test and measurement signals for synchros and synchro based devices. These devices are primarily designed for use in ATE systems. The stimulus and measurement sections are fully programmable over a wide range of angles, voltages, frequencies and impedances.

Typical synchro resolver outputs are programmable over a full 360° range with a .01° resolution. Voltages are programmable from 5V to 140V and a frequency range of 60Hz to 10KHz. Input and output impedances are programmable from 0.1 ohms to 10 kilohms in increments of 0.1 ohms. Measurement and simulation is based on high accuracy tapped toroidal transformers which maintain their performance integrity over long periods without the need for field adjustment or recalibration. Modular construction allows for customizing to specialized ATE requirements.

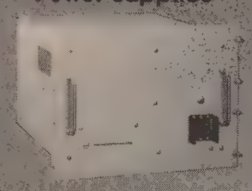
Synchro/Resolver/ Instrumentation

Astrosystems Synchro/Resolver Instrumentation is designed for test and calibration of synchros, resolvers, servos and similar devices. All units utilize high precision toroidal ratio transformers to generate and measure AC signals. Typical accuracies are better than 2 seconds of arc traceable to NBS.

Synchro/Resolver Standards—Synchro/Resolver Standards provide precise output voltage simulating synchro signals to an accuracy of 2 arc seconds. Standard resolutions are .0001°, .001° and 5°. Models are available to cover a full 60Hz to 10KHz frequency range.

Synchro/Resolver Bridges—Synchro/Resolver bridges are designed for high accuracy measurement of synchro/resolver signals. Typical accuracy is 2 seconds of arc. Input and output are fully isolated and the output error signal features a constant null gradient. Input impedance is nominally 500K. Frequency range is 60Hz to 10KHz, depending upon model selected. Standard resolutions are .0001°, .001° and 5°.

Programmable Power Supplies



Astrosystems Programmable Power Supplies provide a variable source of AC and DC voltage and power. These devices are ideal for automatic test equipment and other applications where power inputs must be precisely computer controlled and varied.

AC Sources—Series A2100 and A5500 programmable AC power supplies provide AC power programmable in amplitude and phase. A unique switching autotransformer design eliminates the need for high drive amplifiers resulting in reduced power dissipation and size. 1Ø, 2Ø and 3Ø models are available.

DC Sources—Series A1100 programmable DC power supplies provide a variable source of precisely controlled DC voltage, programmable over a 0-200 volt DC range. Units are fully protected by short current and over-voltage protection circuitry. Supplies and control circuitry are modular in design so that a custom multiple output chassis can be readily implemented.

IEEE-488 Bus Mate Compatible

Programmable instrumentation is implemented with an IEEE-488 GPIB bus using the latest version of the Control Interface Intermediate Language (CIIL). Overall control is exercised by an embedded Test Module Adapter (TMA) incorporating an 8088 processor.

Ballantine Instrumentation . . . A Generation Jump Ahead

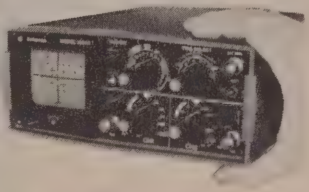
AUTOMATED CALIBRATION SYSTEMS

Fully configured turn key Ballantine COMPUTEST Automated Calibration systems make fast, high quality checks and calibrations of all major functions and modes of oscilloscopes up to state of the art 1 GHz bandwidth units. The systems provide full documented calibration certificate printouts. Calibration throughput can be improved up to 5 times compared with conventional manual methods. Operation is totally user-friendly and requires no programming experience. Three scope cal systems are available offering performance exceeding that of any competitive equipment and at savings up to 70 percent.

The Ballantine COMPUTEST 4003A System employs a Ballantine 6127A Programmable Oscilloscope Calibrator, designed and used in the U.S. Navy's MECCA automated oscilloscope calibration system, and computer control and interface is provided by an IBM PC computer, and high resolution color display to optimize system ergonomics. Ballantine's powerful software package drives the system to provide maximum versatility and simplicity of use. Systems can also be configured for automated calibration of voltmeters, ammeters, ohmmeters and multimeters using the same IBM PC and peripherals supplied with the 4003A Scope Cal System.

TRAVELSCOPES

For the engineer on the move who wants to lighten his workload, Ballantine's Series 1020 Travelscopes offer the smallest, lightest, toughest group of portable miniscopes available. Less than 5 pounds in weight, these instruments provide full professional 15 and 25 MHz oscillosope performance in a unit the size of a bench multimeter. Designed specifically for rugged field applications in computer service, communications, process plants, on shipboards, indoors or outdoors . . . anywhere. The full 4 x 5 cm CRT provides bright, high resolution displays in single or dual trace models. Rechargeable battery options allow complete off-line use. Compact and convenient, they can tuck in a tool kit, or sling on your shoulder, ready to provide reliable service without coddling.



AC & DC CALIBRATION STANDARDS

Ballantine provides metrologists a wide selection of AC/DC thermal transfer standards, coaxial thermal converters, micropotentiometers, and RF comparators. Automated AC/DC transfer measurements at high speed rates are achievable with the unique Ballantine 1600A Autobalance Transfer Standards. All units are NBS calibratable and traceable. A new precision AC and DC current source, the Ballantine 1620A Transconductance Amplifier, converts signal input voltages into proportional output current in the same phase and frequency as the input. Ranges are provided from 200 microamperes full-scale, to 100 amperes full scale, at frequencies from DC to 10 kHz. IEEE 488 bus option can be supplied.

DIGITAL MICRO-OHMETER

The 3½ digit Ballantine 3205A makes high accuracy, high resolution measurements of low resistance values by a true 4-wire method. Full scale ranges are provided from 2 milli-ohms to 200 Ohms with resolution to 1 micro-ohm. A pulse mode of operation minimizes self-heating errors, and allows non-destructive measurements of devices not rated for steady state currents. Push button operation and highly stable test circuitry makes for easy rapid testing. The 3025A is ideal for checks of switch and relay contacts, low resistance "wirewounds," PCB tracks, critical grounds and current paths, weld and bond quality, motor, generator and transformer coils, and more. BCD output of reading is optionally available. Pricing is substantially less than comparable units.

RF MILLIVOLTMETERS

Ballantine's 3440A 1.25 GHz Programmable RF Millivoltmeter features true rms response and NBS traceability for sine and non-sine waveforms. Ranges from 100 microvolts to 3 volts full scale, extendable to 300 volts by a probe divider. Basic accuracy is 0.1%. DB levels can be measured from −60 dBm to +60 dBm. Hall Effect Gaussmeters

DESCRIPTION

Bell Gaussmeters are designed to accurately measure magnetic flux density. Twenty-eight models and 110 standard field probes meet the demanding requirements of most applications.

Bell Gaussmeters provide four magnetic field measurement models: direct measurement of absolute magnetic field density, differential measurement of the difference in magnetic field density at two probe locations, incremental field measurements using an expanded scale and summation measurements.

There are 110 standard probe models for each gaussmeter model. Each is a precision, solid-state, magnetic field sensor built into a rugged package for accurate, repeatable, stable, field measurements. Models available for transverse, axial, differential, two-axis, and three-axis measurements with a variety of field ranges, field sensitivities, and configurations for each.

Current Meter

Model 1776

DESCRIPTION

The Bell Model 1776 digital current meter accurately measures ac, dc and ac-on-dc current with non-contact, clamp-on probes. No need to break the circuit to make a measurement. It's possible to obtain current measurements more easily and safely than voltage measurements, with complete isolation from the bus.

The 1776 digital current meter introduces virtually no resistance on dc readings and extremely small impedance on ac readings. Peak read-and-hold capability is standard. This permits you to read and hold the reading of the peak current appearing on the measured conductor. The 1776 is fully portable, operating from internal rechargeable batteries or 115/230 V, 50-60 Hz ac.

PROBES

Three standard probes are available. Others can be designed and supplied to meet special requirements. Each standard probe has a distinct full-scale range: 1000, 100 and 10 A. Probes are self-calibrating and interchangeable on any 1776 current meter. Special probes available upon request.

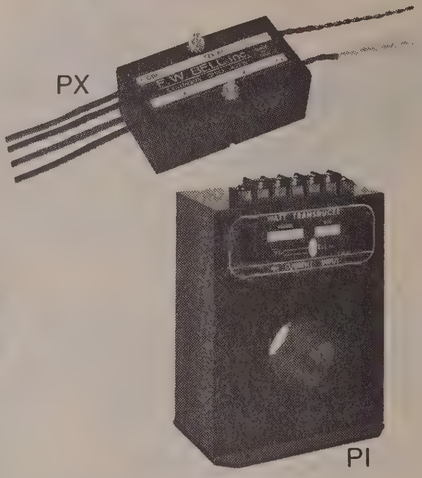
Power Transducers



DESCRIPTION

Power transducers provide an accurate, convenient means of monitoring and controlling a broad variety of operations and processes. The unit senses the ac power being drawn, and provides a proportional dc output voltage which is a precise indicator of load peaks and motor efficiency.

Bell transducers are compact, accurate and dependable solid-state modules, utilizing a Hall generator, a Hall multiplier and appropriate circuitry to reduce the influence of low power factor and fluctuations in ambient temperature.

The output circuit is completely isolated from the input circuit, and it easily interfaces with meters, recorders, amplifiers and power control circuitry.

Bell PX 2000 and PX 4000 series transducers are designed for use with single- or three-phase power in a variety of frequency ranges, while the PI 5110 measures single-phase power in the 55-to-65 Hz range.

The PI 5110 is a through-hole, non-contact power measuring device. It is housed in a Noryl case with four mounting holes passing through the body. It is available with optional base mounting flange.

DESCRIPTION

Bell Current Sensors are small, lightweight, inexpensive devices for non-contact current measurements to 3000 A dc or peak ac up to 1 kHz.

The sensors are non-contact, Hall-effect devices, offering no dc insertion loss, power loss, isolation or heating problems.

The Hall-effect sensor is a four-pole, magneto-sensitive device mounted in the core gap, and reads the magnetic field surrounding the conductor passing through the gap. The field is proportional to the unknown current, and the output voltage of the Hall generator is proportional to this magnetic field, thus proportional to the current.

Various units in the broad line of F.W. Bell current sensors find applications in the automotive, aerospace, industrial and power generation fields.

5 MHz SWEEP/FUNCTION GENERATOR WITH LIN/LOG SWEEP

Model 3030 / $699.00

FEATURES

• Generates sine, square, triangle, positive square, negative square, positive ramp and negative ramp waveforms • Covers .001 Hz to 5 MHz • 4 decade, 10,000:1 log sweep range • 3 decade, 1000:1 linear sweep range • High-accuracy Kelvin-Varley frequency sweep start/stop controls • Wide range variable symmetry control for virtually any wave shape • Calibrated output attenuation from 10 dB to 60 dB.

The model 3030 is B&K-PRECISION's highest-performance sweep/function generator. It provides frequency coverage from .001 Hz to 5 MHz in eight ranges.

For highest accuracy, Kelvin-Varley dividers are used as start/stop controls to set the low and high end limits of the desired frequency sweep. Sweep times are also selectable, from 10 milliseconds to 100 seconds.

For test applications requiring an unusual wave sweep, the variable symmetry control can be used to alter the shape of any waveform selected. The symmetry control is continuously variable from 5% to 95% duty cycle.

All seven of the most commonly needed waveforms are generated by the 3030. Sine, square and triangle waves are pushbutton selectable. Positive square, negative square and positive and negative going ramps can also be selected by using a combination of the three function pushbuttons and the variable symmetry control.

In addition to conventional function generator applications, the instrument can be used to generate tone-burst signals for audio speaker tests, TIM distortion tests in amplifiers, communications systems tone-burst decoder alignment, audio compressor/expander attack/decay time measurement and many other specialized applications.

Digital Delay Generators Light Pulse Generators

Digital Delay Generators provide accurate, repeatable control of time. DDGs are a source of stable intervals, pulses and gates produced as low-jitter outputs for precise triggering, gating, syncing, delaying, blanking, calibrating, etc. Remote IEEE-488 or BCD programmability is available.

Triggering a DDG results in a pair of fast risetime pulses, T_0 (Initial Pulse) and T_1 (Delayed Pulse), from separate outputs. The delay can be the selected interval between T_0 and T_1 or timed from the trigger. A Gate is a third output equal to the delay. With the Model 7085, both T_1's delay and width are digitally selectable and can be auto-swept internally.

Accuracies and jitter of 100 ps or less are attainable. Pulse amplitudes of ±5 V and −1.5 V are standard; the 7085 also has complement and ECL outputs. Amplifiers can boost pulse higher. Model AP-3 portable or TB-4 rack/bin power supply houses the modular units. Key specs are below. Phone (415) 527-1121 to discuss your needs or get detailed literature.

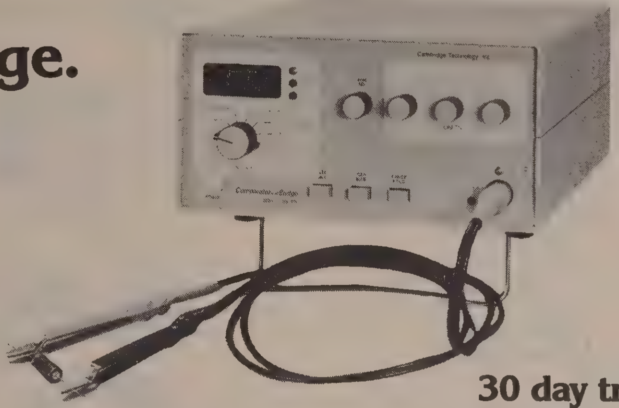
Best value in an inductance and capacitance bridge.

Model 520 L/C bridge



- .25% accuracy
- Dual frequency, 120 Hz. 1 kHz.
- Built-in limits comparator
- Internal DC bias, 0 to 10 V
- Autoranging/Range-hold
- 4 terminal test clips included

30 day trial, no risk

Combines the accuracy of instruments costing three times as much with features that no other instrument in its price range comes close to duplicating.

Two Excitation Frequencies Give Wide Measurement Range

The Model 520 has two standard sinusoidal excitation frequencies: 120 Hz and 1 kHz. Having both frequencies available is important because it extends the operating range and allows you to use the appropriate frequency for measurement. The Model 520 has full scale ranges from 199.9 pF/μH to 1999 μF/H. That's a decade more measuring capability than most single frequency instruments.

Built-in Tri-mode Comparator

This is the only instrument in its price range that includes a comparator, allowing you to sort components for high and low tolerance and dissipation limits, simultaneously.

Internal DC Bias Voltage

The 520 is one of the few instruments at any price that has an internal, continuously adjustable, capacitor bias voltage. The front panel display and a ten-turn control let you set the bias to any voltage between 0 and 10 VDC.

Protected Inputs

Input protection is a feature that you can't appreciate fully until you find out you don't have it. The Model 520 has two separate schemes to provide protection for both fast transients and static overloads.

Autoranging With Range Hold

There's no need to guess the value of an unknown component. Let the quick autoranging circuitry find the value for you. The Range Hold feature lets you make repetitive or sorting measurements at 2 readings per second.

Four Terminal Measurements

True 4 terminal measurements (plus guard) are standard. This is important when measuring very small or very large component values because it eliminates test lead circuit parameters which can give erroneous results. We even include 4 terminal kelvin-type test clips at no additional cost.

Lead Capacitance Null

A front panel screw driver adjustment has been provided to offset test fixture and lead capacitance. The Model 520 can resolve 0.1 pF and this feature is important when measuring small capacitance values.

Rugged Industrial-Duty Construction

The instrument is housed in a heavy metal clam-shell enclosure and it has a sturdy metal tilt stand. There are no wires or cables to jar loose.

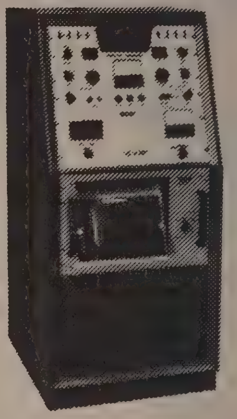
- Continuity to 59 ohms, and to 3 amps
- Insulation resistance to 5K meg variable voltage
- Dielectric strength (hipot) AC and DC to 3000 volt
- Simplified multiple circuit testing. (More than 2 ends to each wire)

CABLEMASTER 400S

The Model 400-S Cablemaster is a modified Model 400-C, designed to test long, installed cables in ships, aircraft, launch facilities and nuclear plants where test points may be hundreds of feet apart. It contains a scanning feature for finding crossed wires which is used in making retrofits and troubleshooting new systems.

CABLEMASTER 1200-C



The Model 1200-C Cablemaster incorporates all of the features of the Model 400-C and functions identically except that it has the capability to test up to 1200 points. To accommodate the additional number of output modules it is mounted in a mobile console. When accessories such as a printer, low ohm analyzer, etc. are incorporated they are mounted within the same console. The 1200-C is modular in design and construction.

IMPACT & VIBRATION INDICATORS, ACCELEROMETERS AND RECORDERS

IMPACT-O-GRAPH RECORDER

Impact-O-Graph recorders are available in sensitivities of 2g to 300g full scale deflection. Recording period of various models is from (1) one minute to (6) six months. Independent styli record time, direction and magnitude of impacts in (3) three separate axes. Lightweight and compact. Self-contained — no outside power necessary. Used to monitor shipping and handling abuse and to design packaging.

IMPACT INDICATOR

Resettable and non-resettable impact indicators (accelerometers) are used to monitor impacts accurately from all directions to give a visual indication that a specific "g" level has been exceeded. Used to monitor shipping and handling abuse. Available up to 300g.

DIGIMAX MODELS D500/D510/D612/D1200

MODEL D612/D1200

Temperature controlled ovens have long been the accepted industry standard for maintaining crystal controlled precision measuring instruments within frequency tolerance over a wider temperature range than is economically achievable using a TCXO (temperature compensated crystal oscillator) time base. Two objectionable characteristics of these ovens are: **1. Bulk. 2. High current consumption.** DMI technology and research has overcome these objections. Gone are versions of bulky current ovens. DMI presents its latest innovation: A .1 PPM proportional oven that not only operates from external power but from batteries as well. DMI's streamlined high accuracy low current proportional type 10 mHz oven outmodes all others.

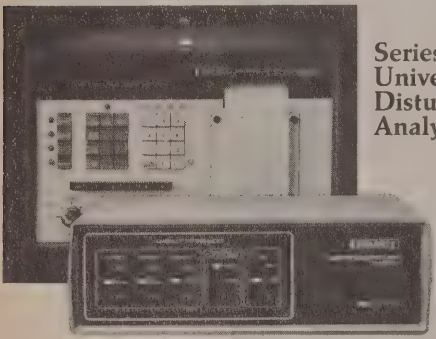
DRANETZ SERIES 626 UNIVERSAL DISTURBANCE ANALYZER

An extremely valuable tool for analyzing power transients and other environmental conditions that affect:

- Computers
- Word Processors
- Telephone/Telecommunications Equipment
- Automated Production Systems
- Medical Instrumentation
- Military and Avionics Systems



Series 626 Universal Disturbance Analyzer

Remote Monitor Unit (RMU)

The Series 626 Universal Disturbance Analyzer is a modularly expandable system for measuring environmental disturbances that affect the proper operation of computers and other sensitive electronic equipment. The Series 626 detects, measures, and records an extensive range of variations in AC power, DC voltage, temperature, humidity, and other environmental factors. For example, the AC power module records transient impulses, both in amplitude and duration, sags, surges, undervoltages, overvoltages and frequency variations with accurate time and date correlation. Up to five individual monitoring modules can be added to the mainframe, which provides the operating controls, alphanumeric printer, time base, and power supply. Each monitoring module can be user-programmed with the precise limits beyond which disturbance detection occurs. A system check facility activates an automatic calibration and diagnostic routine to verify proper operation. An RS232 port is provided for data output and remote programmability.

The Series 626 is packaged in a rugged portable case. AC powered, the 626 is protected from power outages by internal, rechargeable batteries that provide 10 to 40 minutes of full operation. A separate battery supply protects the time clock, data, and program memories for 1 to 3 months.

New Remote Monitor Units (RMU's)

RMU's are low cost additions for the Series 626 that extend its monitoring capabilities to multiple remote locations. RMU's rely on the 626 mainframe, equipped with 626-PA-6036 Interface Adapter, for programming and data readout. Once programmed, each RMU monitors power line disturbances independently, without connection to the 626. Data may be collected by connecting the RMU directly to the 626 mainframe, or remotely to the 626 through an optional plug-in RMU modem.

For full specifications, call or write for Bulletin 626.

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with The System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will accompany your System.

Don't waste any more time. Get organized now!

INTRODUCTION

On January 10, 1983, we at Electronic Precision Components celebrated our twentieth year as a manufacturer of resistive devices. During this period we have tried to treat every individual customer as if they were our one and only. This philosophy has taught us to produce quality devices that have proven their reliability over the past two decades.

Most of the shunts that EPC has manufactured were specials, to customer specifications or custom designed by us, to meet a specific price/performance requirement.

With the introduction of this brochure, we have made many of these designs standard.

Of course, EPC will still custom design to meet your requirements, be it one or many; and look forward to being of service to you in the near future.

SPECIFICATIONS

The resistive element of the shunt is Manganin, which has a temperature coefficient of resistance of ±15 PPM/°C between 40° and 60°C. At rated current the self heating effect should not exceed 80°C.

The Manganin is terminated to brass blocks of sufficient size to insure even heat distribution due to self heating at rated current.

Various tolerances are available; from .01% to 20%, depending on resistance value and the current rating.

Please consult the factory for your particular requirements.

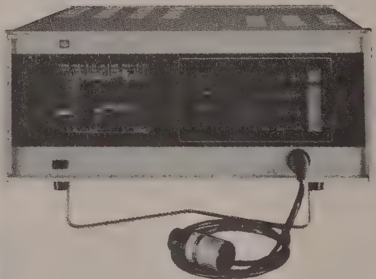
Automatic Peak Power Meter 0.75* – 26GHz Model 478A



The new General Microwave microprocessor based Automatic Peak Power Meter characterizes pulses down to 25 Nanoseconds or less. With the GMC unit, the pulse to be measured is digitized and presented on the built in CRT Monitor on a calibrated graph in either dB or linear power units. The peak power is always displayed as well as any instantaneous power point that the operator selects by sliding a cursor on the graph. Any time parameter of the pulse such as rise time or pulse width is read out automatically by setting a set of cursors to any points on the pulse. Operation on the IEEE-488 standard bus is a standard feature of the instrument.

* Optionally to 5 MHz

Radiation Hazard Meter -RAHAM™

General Microwave RAHAM Hazard Meters detect and measure potentially hazardous electromagnetic energy radiating or leaking from rf and microwave sources, e.g. microwave ovens, medical equipment, radar installations, microwave heaters and dryers, mobile communication systems, electronic warfare systems.

8175 PL Series — Gas Insulated Modular Unit

The high voltage circuitry in this unit is a cascade system, overcoming disadvantages of conventional voltage-multiplier circuits. Each high voltage multiplier is a complete voltage doubler with its own transformer, rectifiers, capacitors, series resistors, meter multiplier, and an insulated tertiary to feed the next stage. The conservatively designed transformers can be overloaded repeatedly. Anticorona toroids are provided as needed.

8060 PL Series — Air Insulated DC Insulation Tester

The cascade circuitry (patent #3,643,105) of the 8060 PL series eliminates the major disadvantages of the widely used Cockroft Walton multiplier circuit: there is no decrease in power capability as more HV sections are added. Each HV module is a complete voltage doubler with its own epoxy-encapsulated transformer; each transformer has a tertiary winding to feed the succeeding stage. The standard controller has a continuous rating of 1 KW, which can be raised to 2 KW during cable charging.

From the leading manufacturer of precision standards and measuring instrumentation, Julie Research, a new computer controlled test system is available at a low cost to fit into the budgets of even small calibration and testing laboratories.

LOCOST* features a combination of computer, data terminal, high speed thermal printer, programming cassette memory and a programming calculator which can be operated by lab technicians with little or no computer and programming experience. It uses BASIC language, has an alphanumeric keyboard and an interactive 32-character display, as well as a built-in 15Kbyte main-line memory. Cassette memory is 32,000 words. Capability of the calculator is equivalent to a 10K or 12K minicomputer. A unique, labor saving feature of LOCOST* is its unique programmed software which makes it possible to generate, store, and carry-out test programs for new instruments efficiently. Simple questions concerning the specifications of the instrument under test are asked by the calculator and the operator answers these questions by typing specifications such as full-scale accuracy, etc. When completed, these specifications are then stored on cassette memory for future reference and use by the system's preprogrammed meter test routine. Programming costs are 80 to 90% lower than for conventional computer controlled systems.

A complete array of programmable DC and AC test instrumentation is available to satisfy even the most demanding testing and calibration applications. LOCOST* is a highly flexible user oriented system and is expandable in both hardware and software. Extended range instruments for both stimulus and measurement may be integrated into these systems at the time of purchase or at a later date as new requirements arise. Typical systems that are available include:

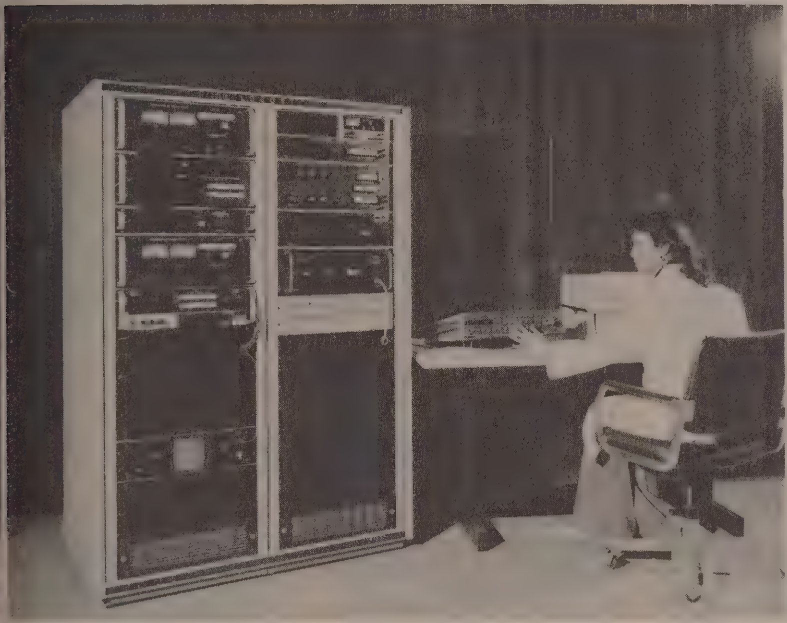
AUTOMATED TEST EQUIPMENT

FOR $60 YOU CAN TURN CALIBRATION PROBLEMS INTO PROFITS AT JULIE HIGH SPEED CALIBRATION CENTERS

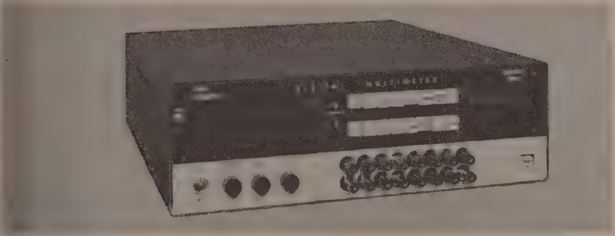


Why buy, rent, or invest in expensive hardware and software when $60 will allow you to time-share a state-of-the-art LOCOST computerized calibration system — including all of the high performance hardware and software you need for full-quality, fully documented and fully traceable calibrations. A single $60 time-shared hour on LOCOST is enough to finish four calibration jobs, (or three with calibration adjustments) — all of the highest quality, with complete computerized printout of all test variable data and repair diagnostics — easily worth $250 or more by present-day standards.

At our centers, the LOCOST system is there to serve you whenever you want it, and for as much work (or as little) as you really need.

Call us for more information about high-speed time-share calibration at the new LOCOST centers. If you should want to set up your own center, we also have data on leasing or franchising LOCOST systems.

PROGRAMMABLE AC/DC MULTIMETERS AND PRODUCTION CALIBRATORS DM-1000 SERIES DIGITAL MULTIMETERS TO 1 PPM ACCURACY/RESOLUTION/ STABILITY



JULIE RESEARCH, for 15 years the pioneer in the manufacture of Precision Standards, now leads the way in providing Multimodel automatic precision calibrators. The new approach to production measurements with three sigma certainty reduces test equipment costs and testing time. The DM-1000 Multimeter doubles as a Ratiometer and Voltage Source in addition to measuring Voltage, Resistance and Current to 1 ppm. Just a few of this amazing instrument's uses are:

- **CALIBRATING DVM's AND DMM's** — 2½ digits to 5½ digits, with full confidence.
- **CALIBRATING A/D AND D/A CONVERTERS** — 8-bit to 20-bit binary resolution.
- **CALIBRATING ANALOG TRANSDUCERS** — to unprecedented orders of precision.
- **MEASURING ZENER DIODES AND STANDARD CELLS** — 1% to 0.0001%, automatically.
- **MEASURING RESISTORS AND NETWORKS** — both absolute resistance and ratios.
- **CALIBRATING POTENTIOMETERS AND ATTENUATORS** — both linear and nonlinear.
- **MEASURING POWER-SUPPLY CHARACTERISTICS** — absolute output, regulation, tracking, stability.
- **CALIBRATING AC SIGNALS AND GAINS** — over 30 Hz-5 kHz, with excellent linearity.
- **STANDARDIZING CURRENT SOURCES** — over wide ranges, to unprecedented accuracy.
- **MONITORING PROCESS VARIABLES** — electrical parameters, temperature, strain, pressure, etc.

These new calibrators are the ultimate in accurate DC measurements, offering numerous benefits which yield the most reliable and flexible operation ever. Some of the more obvious benefits are low parts count for reliability, ease of programmable application for quality measurements with isolated data output with BCD input, and output options.

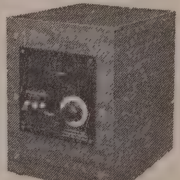
SATURATED STANDARD CELL OVENS



The best voltage reference possible must meet two basic critical requirements —

1. Time performance; the three saturated cells used must have minimum output voltage change with time.
2. The enclosure must maintain its nominal temperature with time.

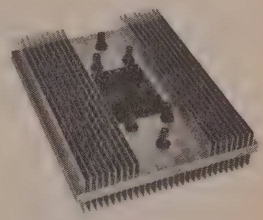
CURRENT SHUNTS



High quality shunts are high quality 4-terminal resistors especially designed to operate at relatively higher current levels without suffering appreciable resistance change. Most high ranges (50 A for example) are the finned heat-sink type. Most lower ranges are available in single and multiple-range (oil-filled) units. Accuracies up to .0025% are available although .05% or .01% are most typical. Yearly stabilities of .01% are typical and temperature coefficients are 5 ppm/°C or better. Ask for a data sheet.

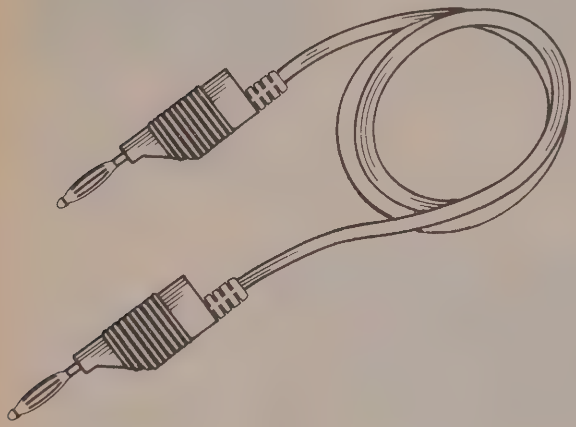
ULTRA-FLEX Test Leads



Laboratory-grade test leads provide superior performance and longer test lead life. Main conductor consists of 384 strands of soft drawn copper wire for tangle-free operation. Pure silicone rubber insulation withstands temperatures from -100°C to 300°C (-148°F to 572°F). Thermoplastic banana plug body resists chemical influences and helps prevent conductor separation with a strain relief. All test leads feature a stackable 3.5mm (0.128″) banana plug and jack at both ends to provide multiple outputs from one input source.

Plug Handle:	Thermoplastic PVC insulated
Plug Body:	Brass, nickel plated

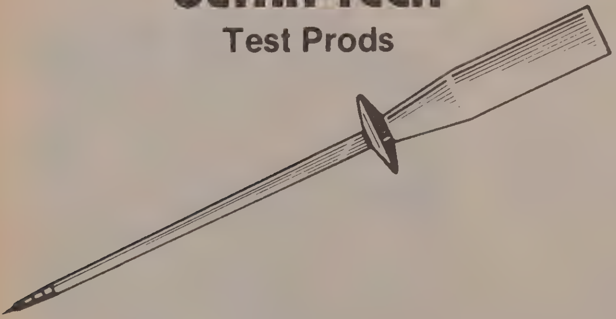
ULTRA-TECH
Test Prods



Designed to accept ULTRA-FLEX Test Leads and other 3.5 mm banana plug terminated leads. Laboratory-grade test prods feature lightweight, thermoplastic insulation that can withstand temperatures to 300°C (572°F). "CLIPPER"
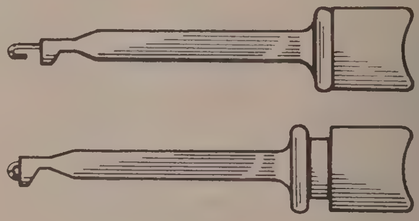
Plunger-Type Test Clips



"Clipper" test clips make difficult IC test connections fast and easy. A spring-loaded hook attaches firmly yet gently to delicate component leads and terminals to free hands while troubleshooting and circuit testing. Insulated to a single contact point to assure true readings, the hook retracts into the plastic tip when removed from the contact point to prevent shorting. Six standard colors with interchangeable plunger heads allows hundreds of color combinations for multi-circuit testing. Four sizes are offered to meet a broad range of testing requirements.

Plunger Head & Body:	Heat and chemical resistant (70% nylon, 30% glass fiber)
One-Piece Blade Conductor/Hook:	Beryllium copper for maximum heat dissipation. Designed for connection over component leads up to .060 inches in diameter (1.52mm).

PRODUCTION CAPABILITIES

Mueller Electric Company, a privately-owned corporation, enters its 76th year with 72,000 square feet of manufacturing, assembly and warehouse capacity. We invite you to call us for prompt attention to your design or manufacturing requirements for which our experience and production capabilities might be suitable. As the largest manufacturer of electrical test clips and insulators, we have developed many unique capabilities in the following areas:

METAL FABRICATION: Our modern press department features presses ranging in size from one to fifty tons. Materials which we fabricate include alloy steels, copper, copper alloy, and stainless steel

SPRING PRODUCTION: Mueller manufactures helical and torsion springs in a variety of sizes. Materials available include hard (cold) drawn steel and music wire, stainless steel, inconel and phosphor bronze. Both strength and size can be modified to meet many special requirements.

PLATING: While we normally plate with cadmium, we also offer a wide variety of other plating techniques, including lead, chrome, chromate, nickel, zinc, tin and copper.

INJECTION MOLDING: All Mueller insulators are produced on our own molding equipment using both flexible polyvinyl chloride (PVC) and acetate. Ranging in size up to 30 ounce capacity, these machines can be used with most thermoplastic materials.

ASSEMBLY DEPARTMENT: Our assembly department features personnel who are skilled in small parts assembly. Our system can be readily adapted to include secondary or special operations.

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with The System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will accompany your System.

Don't waste any more time. Get organized now!

Synchro/Resolver Instrumentation

Phase Angle Voltmeters

Models 225, 225/Ratiometer Digital Phase Angle Voltmeters

This series of instruments provides the digital equivalent of the well-known Phase Angle Voltmeter, but with significant increases in both precision and speed of measurement. Voltage measurements include total, fundamental, in-phase and quadrature. Full-scale voltage ranges (10mV to 1000V) and phase angle (359.9°) are directly read on a 4½ digit display. Voltage ranges may be pushbutton selected or auto-ranged. All models provide for both manual and remote programming or optional 488 IB (IEEE-STD-488-1978) interface bus. Digital outputs include reading, mode, range and polarity information as well as data status signals. Long-term use of this instrument series is assured since field-change of frequency plug-in modules requires only a routine recalibration procedure. An added ratiometric option (designated 225/Ratiometer) provides direct reading of ratio. No adjustments are required and accuracies of 0.2% are obtainable.

Model 321 Wideband Phase Angle Voltmeter

The Model 321 features broadband phase sensitive operation at any frequency between 10 Hz and 100 kHz. Odd and even harmonic rejection exceeds 40 dB and phase accuracy is typically 0.5°. In addition to phase angle; total, fundamental, in-phase and quadrature voltages can be measured. Due to a new digital lock-on circuit, the reference can vary from 150 mV to 150V without adjustment or calibration. The 321's versatility and accuracy make it ideally suited for both laboratory and bench use

Model 213C Phase Angle Voltmeters

Successor to the famous VM-202, provides phase-sensitive measurement at a single pre-specified frequency from 30 Hz to 10kHz with ±5% frequency bandwidth (without adjustment). Full scale measurement from 300uV to 300V. The Model 213C has signal and reference isolation.

Programmable Resolver/Synchro Simulators

RESOLVER•SYNCHRO SIMULATOR
NORTH ATLANTIC 5310

Model 5310 Programmable Resolver/Synchro Simulator

The Model 5310 can be used as a bench-top Resolver / Synchro Simulator or as a completely programmable device for ATE systems.

The unit features fully isolated inputs and outputs and is protected against accidental short circuits and overloads on the output and overvoltage and transients on the power line input.

Standard features include full remote programmability for line-to-line level, reference levels, synchro or resolver mode and output angle. Remote control is parallel BCD or binary bussable tri-state; IEEE-488-1978 GPIB is available. The 5310 also has full front-panel controls for manual operation.

Featuring 18 bit resolution, 3.0VA output and 36 arc second accuracy, the 5310 is ideally suited for many commercial and military applications.

Angle Position Indicators

Series 800, 801, 8300, 8800 Angle Position Indicators

All North Atlantic industries' Angle Positions Indicators offer a combination of LSI - enhanced reliability, low cost and features never before available. The 800 Synchro Panel Meter features 0.1° resolution, small size, type II tracking and full pin programming at a very low price. Many options, including user settable variable scale, are available. The model 801 is physically identical to the 800 but offers an additional decade of resolution and an accuracy to 0.03°. Other features include rear switch programmable synchro/resolver and line-to-line selection, and tri-state BCD outputs.

The 8300 offers 0.01° resolution and accuracy to 0.03°. Through the use of direct hard-wire programming in the mating rear connector, mode and line-to-line are selected (resolver or synchro 11.8V, 26V or 90V) for each of the two front panel pushbuttons. The reference can vary between 47 and 440 Hz.

The 8800 achieves state-of-the-art performance with full type II tracking and auto phase correction. Featuring 0.001° resolution and 0.004° accuracy the 8800 accepts any standard line-to-line level without preselecting or pre-programming the input signal. The 8810 bench top or ATE version is available with the 488-IB (IEEE-STD-488).

Resolver Synchro Simulators/ Standards & Bridges

Models 530, 530/20, 532 Resolver Synchro Simulators/Standards

These simulators provide the ideal outputs for driving resolvers and synchros at 11.8, 26, 90 and 115V line-to-line voltages. The reference frequency can be 50 Hz to 11 kHz depending on model

Accuracies of up to 2 arc seconds are available. Standard resolutions are .0001°, .001°, and 5°. The 530 and 530/20 are 19'' rack mountable; the 532 is a thumbwheel settable DPM style unit.

Models 540/10 Resolver Synchro Bridge

These bridges permit direct measurement of resolver and synchro transmitters. They feature a constant null gradient output voltage, isolated input and output, and input impedance over 500K. The Model 540/10 features 2 arc second accuracy over the band of 400 Hz to 800 Hz. Standard resolution is .001°. All units are 19″ rack mountable.

POWER TEST PANELS

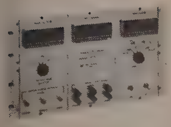
MODEL PTP-990 POWER TEST PANEL

FEATURES AND APPLICATIONS:

- Commercial appliance testing
- Core loss testing
- Motor testing
- Large electrical machinery testing

The PTP-990 contains all necessary voltage, current, and power transducers, contactors, and circuit breakers. The operator selects the required service, voltage, and current range, connects the equipment to be tested to the PTP-990, and pushes the test button. The PTP-990 displays current, voltage, and power on digital panel meters. BCD outputs may be provided for a data collection system or microprocessor interface. This power test panel represents the capabilities of OSI to manufacture test equipment to meet customer needs.

MODULAR TEST PANEL



FEATURES AND APPLICATIONS

- Appliance testing
- Process monitoring
- Transient power determination
- Prototype characterization
- Production and quality testing
- Motor efficiencies
- Assembly line power consumption
- Sub station monitoring

OSI manufactures a complete line of Modular Power Test Panels, including volt, ampere, watt, and watt-hour modules. The flexibility of modular construction allows future expansion of a basic test panel.

Modules are available for 1 phase or poly phase power measurements. Voltage modules are available for 120, 240, and 480 volts, DC to 400 Hz. Current modules are available from 1 Amp through 2000 Amps.

Each module has a 0 to 10 volt DC analog signal output. This isolated output provides a signal suitable for recording or display purposes.

Split core (clamp-on) transducers are available on 100 Ampere and higher current levels so that the modular test panel may be installed in the system without disconnecting the current leads.

These test panels are designed to meet Federal Regulations requiring manufacturer's to rate electrical power and energy consumption of their products. A detailed brochure provides information helpful in the selection of optimum units for particular testing or monitoring needs.

NEW! MINIATURE SCOPE PROBE

FROM $30 TO $60

The Probe Master 2900 series oscilloscope probes combine the characteristics of high performance, and fast rise time pulse response, with a **slender design** to meet the needs of today's micro electronics.

The **miniature tip** is ideal for accessing high density boards and hard to reach test points. By locating the high and low frequency compensation circuits in the BNC end of the cable, the design of the probe has become light weight and slender for easy handling.

Other features of the 2900 series probes include a replaceable probe tip, replaceable ground lead and a Readout Actuator option (RA).

The Readout Actuator option (permanently attached) is available on the 10x fixed attenuation probes only. This option provides the necessary resistor circuit to change the range factor on the model 465, 475, 485 and 7000 series Tektronix scopes.

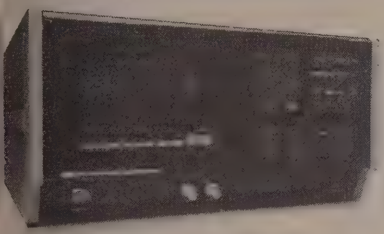
SIGNAL GENERATION

RE107 RE503 RE502
These latest additions to the RE family are capable of producing an AM stereo signal of the Motorola or Magnavox configuration as well as the conventional AM/FM stereo signals. The RE107 is a fully programmable, synthesized signal generator. The RE503 and RE502 are programmable AM & FM stereo generators. A variety of interfaces are available including IEEE/IEC, BCD, and a setup storing memory option.

RE104 RE501
Providing digital programmability, these units are ideal for production applications. These units have the same interface options as the RE107, RE502, and RE503. The RE501 produces the conventional AM/FM stereo signals while the RE104 produces the RF signal in the frequency range of 150 kHz to 30 MHz and 86 MHz to 130 MHz.

RE101 SMG40
These compact instruments are designed exclusively for bench top testing of high quality receivers. The RE101 has a frequency range of 150 kHz to 30 MHz and 87 MHz to 130 MHz. The output is continuously variable with a range of 140 dB up to 1.0V rms RF Output Level. Sweep capabilities are built-in for alignment applications. Signal purity achieved is <.05% THD for FM and <.3% THD for AM. Stereo signals maintain a channel separation in excess of 60 dB.

AUDIO ANALYSIS



RE201 Dual Channel Audio Analyzer
The RE201 makes measurements in the 20 Hz to 25 kHz bandwidth by use of FFT analysis and real-time measurements. It is capable of measuring THD, TIM, IM (SMPTE), DFIM (CCIF), Frequency, Phase, Separation/Crosstalk, RMS (selective, peak), DC, and Wow & Flutter. This multi-processor unit is designed for maximum flexibility with a menu selectable operating system controlled from the front panel keyboard and displayed on the 9" CRT. The maximum capabilities allow THD measurements to less than 0.003%, IM to less than 0.03%, and frequency resolution down to 4 Hz with 80 dB isolation.
The audio source option, digitally generates user programmable waveforms including the complex distortion waveforms and multi-tone signals containing up to 8 single tones. The RE201 is one of the most extensively EMI shielded instruments in the industry. It is fully programmable through the IEEE 488 bus and produces a hard copy of the CRT display through the RS 232 bus.

RE256
The RE256 Dual Channel Audio Analyzer performs the full complement of audio measurements as the RE201 with the exception of DC and Phase. The RE256 meets demanding production needs by providing RMS voltage measurements in 8 msec, frequency measurements in 180 msec, and programmable digital filters for limited bandwidth measurements. Communication is achieved via IEEE 488 bus and a separate controller. Results can be displayed on the RE902 CRT which is provided with the RE256.

RE402/403
The RE402/403 bench top instruments are designed for accurate wow and flutter measurements. The RE402 is capable of measuring frequency drift to an absolute accuracy of 0.01%. Selectable measuring parameters conform to DIN, CCIR, IEC, NAB and JIS standards. The RE403 is a low frequency analyzer, providing 30 discrete LED spectral component displays with 1/3 octave spacing from .2 to 200 Hz.

COMPONENT TESTING

CLT1
Using the non-linearity concept of testing active and passive components, the CLT1 has achieved the West German and Japanese standard for reliability testing. The CLT1 measures the third harmonic voltage generated by a pure 10 kHz input, and can isolate this harmonic 150 dB below the fundamental. With an impedance range of less than 1 ohm to 100 Mega ohms, and the ability to measure up to more than 10 components per second, the CLT1 is an ideal tool instrument for fast, reliable life testing of all components.

IM6 MEGOHMMETER
The IM6 is a logarithmically scaled measuring device capable of measuring 1 to 10^9 Mohm or 1pA to 1mA in one range. Measurement voltages from 1 to 999 volts in one volt increments are selectable.

MM2 RLC METER
The MM2 is an RLC Meter capable of measuring resistance 3 ohm to 1 Mohm f.s.d., capacitance 3 pF to 100 μF, and 3 μH to 100H f.s.d. Test frequencies range from 1.6 MHz to 160 Hz dependent upon the range. Results are displayed on an analog meter.

FIBER OPTICS

RE601
Optical Time Domain Reflectometer
A patented photon-counting technique, combined with statistical data processing, allows an 80 dB two-way dynamic range to be achieved at 850 nm wavelengths on graded index optical fiber. Measuring such parameters as overall loss or (in real time) splice and connector loss is done from a self contained front panel keyboard. Variable attenuation accuracy of 0.01 dB or better or distance measurements from 0 to 20 km, with a resolution of 5 m to 20 m, can also be made from the keyboard. Any segment of the measured cable can be isolated and evaluated extensively; the results can also be sent to a digital or analog X-Y recorder through IEEE 488 or RS 232C.

Digital Transmission Systems
Digital transmission systems that handle NTSC, PAL or SECAM video signals and up to 18 audio signals on a single optical fiber. Optical transmitter and receiver operate in the short or long wavelength regions. Repeater spacings of more than 60 km are attainable. The equipment is designed as modular rack-mountable units featuring remote monitoring and alarm indicators.
System capabilities include bit-rate transmission to 280 Mb/sec (90 Mb/s & 140 M/bs also available). Applications include network television, secure communications, long-distance telecommunications and CATV trunking.

FEATURES

Ammeter: Reads total output current
The new M100DC Hipot Tester is completely automatic and safe to use. It enables quality assurance and production test personnel to fully comply with worldwide testing standards such as: UL, BSI, VDE, IEC and others.

The M100DC performs both high voltage leakage tests and the usual hipot tests. As a special feature, the M100DC performs a one Ampere, AC ground continuity test before and during the hipot test. This continuous test ensures an established ground path between the M100DC and the device under test.

An unusual feature of this precision instrument is its ability to completely shut down the applied high voltage in two milliseconds and at the same time totally discharge the device under test. This action occurs at the conclusion of each test (pass or fail) and ensures a non-destructive test. The output is always clamped to ground until the test is initiated to make certain there are no floating voltages present between tests.

The M100DC includes all of the standard ROD-L solid-state, voltage-control circuitry for precise testing. Voltage regulation is within 1% at full rated load. The circuitry includes a unique auto-calibration mode which enables the desired test voltage and the current trip point to be adjusted. This eliminates the requirement for external meters or loads. Both the voltage rate of rise and the test time are adjustable at the rear panel while the front panel "A/B" switch selects t desired combination of rate of rise and test time each position.

The M100DC is equipped with standard ROD-L fron panel indicators including: Ready, Testing, V-Se I-Set, High Voltage "ON", "FAIL" warning light, Aud ible alarm, Ammeter and Voltmeter, Power switc A/B set-up switch, Rest pushbutton switch, AC/D mode selector switch, Chassis ground binding pos and a "Test Start" switch. The maximum output ratin is 5.5 kVDC at 5 milliamperes. The voltage rate of ris is adjustable from 5000 V/sec. to 50 V/sec. and a tes time lasting from 1 to 90 seconds may be selected. Many options are also available.

he M488 Hipot Test System is a self-contained, rugged nstrument that can be operated either manually, or via 488-bus interface. The bus feature is particularly aluable in fast, efficient testing of electronic and elecrical products — hipot testing of power supplies and omponents such as transformers, line filters and ables.

us Programming — Data Logging

he test cycle is fully automatic. The M488 will raise the applied voltage at a predetermined rate of rise, up o the desired test voltage level, and then maintain it or the test time desired. Output voltage, rate of rise, est time and current trip point are bus controlled. Via he bus, the computer can also interrogate the M488 o learn what failure occurred, such as arc or ground ontinuity. It can also request the magnitudes of the otal (complex) current and the resistive (real) current. n addition, a status update of current test parameters an be transmitted.

ontinuous Ground Continuity Monitoring

unique feature of the M488 is its ability to test and ontinuously monitor ground continuity for the duration f each hipot test. This ensures that an inadvertent hock does not occur to the operator and that the quipment undergoing test is not damaged.

or safety, a second security "CHASSIS GROUND" ust be connected to a secure, low-resistance point on he unit under test. The security "CHASSIS GROUND" f the unit under test is monitored and tested electroncally while the high voltage is applied. If the ground ails during the test, the M488 automatically activates ailure operation, i.e., high voltage is shut down and here is a visual and audible alarm.

ow-Voltage, Dead-Short Test

nsures that the device does not have a dead-short rom the energized circuit to ground. The test load ust be at least 1000 ohms. If not, a failure indication s generated.

Superior Safety Features

Designed with operator safety as the primary design rule, the new Hipot Test System incorporates traditional, ROD-L safety features. Electronic shutdown occurs within 2 milliseconds if either dielectric breakdown, over current, or a ground continuity fault occurs. To prevent turn-on surges, high-voltage application is governed by an electronically-controlled rate-of-rise circuit and zero-crossing turn on. A visual indicator warns the operator whenever voltage is present at the test socket. Other indicators, both visual and audible, denote ground continuity loop failure, arc detection and excessive current (both real and total).

Programming Details

Bus Address: Select address from 0 to 30

Test Parameter Configuration: Hipot test parameters — voltage, test time, voltage rate of rise, current trip points — are sent to the M488 before a test can begin. Each number is passed with a semi-colon between it and the next number to delimit the respective parameter fields.

End-of-Line Delimiters: The M488 will support all reasonable combinations of line delimiters — e.g., CR, LF, or EOI (End-or-Identify)

Starting a Test: Send "G" or "GET"

To Request An Update Message: Send "?" at the desired sample point. Set M488 to *TALKER* to receive data. During the test, the Update Message includes the voltage and current as well as the status of the test, and seconds remaining in the test

To Halt or Reset the M488: Send "DCL" (device clear) at any time. This will always asynchronously reset the M488

Test Time-Out: The M488 will either send a "SRQ" (service request) at the end of the test, or it will simply time-out and wait for the final update request from the controller, or DCL

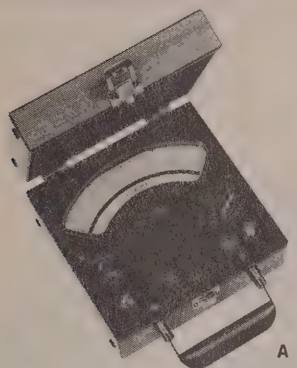
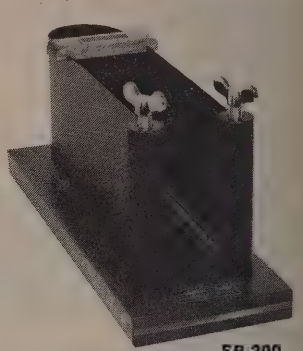
THERMOCOUPLE METERS
AC-DC WATTMETERS



A

Thermocouple instruments offer the user significant advantages in frequency response and sensitivity over other AC types with true rms response. They can be used on DC and AC from 7 cps to 20 Mc/s, and in instances where UHF thermal converters are employed, this frequency range can be extended to over 100 Mc/s. **Sensitive Research** thermoelements have excellent AC/DC transfer characteristics (low reversal). Thermocouple instruments can be calibrated directly on DC and only their AC/DC difference, or frequency influence, has to be checked by AC transfer methods. A thermocouple field replacement feature (TRF) is supplied in the Models A and AU. Automatic or manual "Push to Read" overload protection is available. Automatic temperature compensation from 20° to 30° C is standard (except University Model).



SR-300

Standard Current Shunts

RF

Audio Frequency Volt and Milliammeters

Model A series consists of AC/DC multirange milliammeters and single or multirange voltmeters. Accuracy is ±0.5% fs (±0.75% for instruments with fs ranges of 3 ma or less or a sensitivity of 500 ohms/v). Multirange combinations are offered from 1 ma to 1.5 amps; 0.2 v to 1.5 kv. Frequency range is 7 cps to 7 Kc/s on voltage and 7 cps to 15 Kc/s on current. Sensitivity is 100, 200 or 500 ohms/v. 6.3" scale length. (Single range milliammeters have a frequency response up to 1 Mc/s and are listed under Model RF.) Model AU is identical to the Model A, except frequency range is extended to 35 Kc/s on voltage and 20 Kc/s on current.

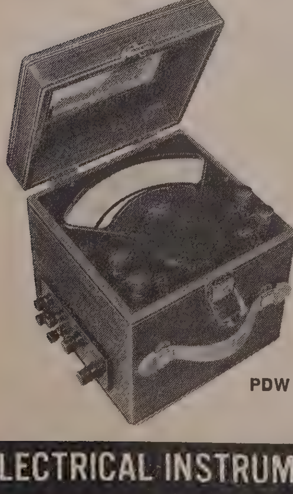
University

Radio Frequency Volt, Amp and Milliammeters

Model RF series consists of AC/DC single range and multirange instruments for use up to 20 Mc/s. Model RF multirange voltmeters utilize special switching to increase frequency range considerably beyond normal limits of other instruments containing this operational feature. Frequency influence is negligible over the first 20% of their frequency span. Accuracy is ±0.5% fs + (±0.5% max. frequency influence) on multirange units from 1 v (5 Mc/s) to 300 v (150 Kc/s). Instruments with a single range of 1 v or 3 v have a ±0.5% frequency response to 10 Mc/s. RF ammeters and milliammeters are available with accuracies of ±1% fs from 1 ma to 100 amps. 6.3" scale length.

Compact Thermocouple Instruments

University Model comprises a series of ±0.75% accurate, low cost, small sized milliammeters and voltmeters for AC/DC measurements up to 7.5 Kc/s (single range milliammeters up to 500 Kc/s). Multirange instruments are switch controlled. Up to 7 fs ranges available from 2 ma to 1 amp or 200 mv to 300 v (100 or 500 ohms/v). 4" scale length. University Model is comparable in general construction quality to Model A, but has certain limitations in range, frequency response, resolution and the accessory features it can contain (temperature compensation, TRF, etc.), because of relatively small size.



PDW

Polyphase Wattmeters

Model PDW is a multirange 2 element AC/DC electrodynamometer wattmeter for the measurement of single and 3 phase power down to 50% PF and up to 800 cps. Can be used in 3 phase 3 wire circuits, single phase 3 wire circuits and 3 phase 4 wire circuits. Indicates 3 phase power for any combination of balanced or unbalanced loads. HIGH VOLTAGE MEASUREMENT

PARK

High Voltage Divider

Model PARK Voltage Divider is constructed to a design by J. H. Park. (Ref: "Journal of Research" of National Bureau of Standards, Engineering and Instrumentation Vol. 66C, No. 1, Jan.—Mar., 1962. Reprints available upon request.) It is similar to the NBS standard employed in their calibration of high voltage instruments. Each 100 kv divider consists of 100 individually shielded one-megohm resistors, matched to each other to achieve an approximate temperature coefficient of less than 1 ppm/°C, and connected in series to form a vertical helix between a ground plate and a high voltage electrode. Uniquely shielded, testing indicates that corona, heating and leakage errors are less than 10 ppm at less than 10 ppm at 50 kv and 50 ppm at 100 kv.

The divider's special "hat" is designed to give uniform gradients from the high voltage electrode to ground and allows stacking of additional 100 kv units for higher voltage measurements. Each unit is only 22¼" high! DC Ratio Accuracy: ±.05%, 100 kv to 1 v; ±.5%, 100 kv to 1 kv. AC Ratio Accuracy: ±.5%, 50 kv (max.) to 500 v. (60 cps only). Recommended readout instrument at 1 v output tap is a precision DC potentiometer, at 1 kv tap (.5 kv on AC) recommended instrument is a ±.5% accurate electrostatic voltmeter (**Sensitive Research** Model ESD described below).

Special High Voltage Dividers

Based on experience with the many Park Dividers already manufactured and their proved reliability, special designs have been constructed and proposed. These special dividers are essentially the same as the Park except for such criteria as sensitivity and size. Designs up to 600 KV DC at ±1% accuracy have been constructed and successfully used by our customers. Dividers for use up to 1,000,000 volts are under consideration. Although most designs considered so far have been for single ranges, there is no particular objection to building a divider with several ranges. Present certification by NBS is limited to 100 KV but higher ranges can be calibrated by "bootstrapping" methods.

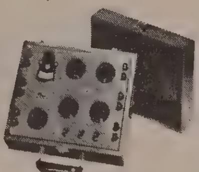
638-R KELVIN WHEATSTONE BRIDGE



A portable Kelvin Wheatstone Bridge offering exceptional versatility and practicality. Wide measurement range is afforded by integrated Kelvin (.001 ohm to 10 ohms) and Wheatstone (1 ohm to 11 megohms) circuits. Internal galvanometer and compartment for 3 (1.5 volt) flashlight batteries supply portable operation in 0.1 ohm to 50,000 ohm range. Binding posts to connect external galvanometer (.005MA/MM sensitivity) and power supply (1 to 45 volts) supplied for higher resistance measurements. Limits of error are ±.75% (Kelvin circuit) and ±.2% (Wheatstone circuit). Rheostat arm is brought out to two binding posts to provide resistance decade operation (11,110 ohms on 1 ohm step increments) with ±.1% accuracy above 10 ohms and ±.25% for 1 ohm steps. Separate current and potential terminals are available for low resistance measurements.

6100 WHEATSTONE-FAULT LOCATION BRIDGE

All purpose portable instrument for laboratory and field resistance measurements. Fault location capabilities of wires and cables performed with, Murray, Varley, Hilborn and Fisher loop tests. DC resistance from 1 ohm to 1.011 megohms with ±2% limit of error. Built-in galvanometer and compartment for 3 (1.5 volt) flashlight batteries permit portable measurements to 50,000 ohms — binding posts to connect external galvanometer and power supply available for testing of higher resistances. Rheostat arm of bridge connects to two binding posts for decade resistance operation. Available housed in weatherproof metal case and removable lid or with wooden case and removable lid.

DYNALOAD POWER SUPPLY TEST EQUIPMENT

WHY THE DYNALOAD? Transistor Devices, Inc., has been a leader in the custom designed power supply field for over 20 years. We have developed over 3000 different power supplies and continue to produce many of them all the time. Testing these supplies would involve a multiplicity of power resistors and clip leads, resulting in a very long changeover time from one model to another, were it not for the Dynaload series of dynamic load test equipment. We developed the Dynaload series and used them successfully in our test department, improving on them and adding new features as we needed them. The models we are now able to offer represent over 10 years of experience in solving problems with the Dynaload.

WHAT IS A DYNALOAD? The Dynaload is a solid state electrical load, designed for both special and production test of power supplies, servo systems, DC generators, and similar power equipment. The mode selector switch permits the instantaneous choice of constant resistance, constant current, or constant voltage load characteristics over a wide dynamic range. Provision is also made for external programming for automatic test equipment or for simulating special time-varying loads such as circuit breakers or digital printers.

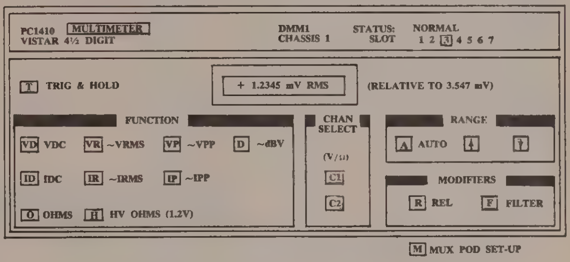
CAN YOU OPERATE MANUAL MULTIMETERS, OSCILLATORS, ETC.? Then you already know how to operate the VISTAR PC1000 ATE Instrument System! Push a button on the modular instrument panel and your CRT monitor displays a "front panel" similar to that below. One or two keystrokes sets up any instrument function and all settings may be disk stored (Step Procedure Mode) giving you the ability to semi-automatically (or automatically) test your cards & components.



At a system cost comparable to manual instruments, the VISTAR PC1000 System will shorten your engineering lab, pilot production, and production electronic testing without requiring you to become an expert programmer. Your IEEE488 instruments may also be compatibly blended with the PC1000 using the PC1320 interface module. All modular instruments are electrically and mechanically compatible with the IBM-PC mainframe.

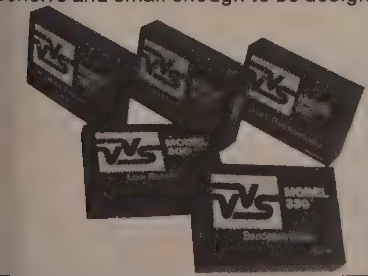
PROGRAMMABLE MINI-INSTRUMENTS

Get your products to the marketplace faster and test them quickly by designing-in these ready-made mini-programmable instrument modules! Most of these instuments employ a new proprietary precision voltage variable conductance technology which gives you low-cost, infinite-resolution programmability in active RC filters, oscillators, and attenuators. The instrument's key parameter (e.g. filter cutoff frequency) is voltage tunable over, typically, a 100:1 range. Use a simple panel pot or micro-computer controlled DAC to set this parameter. Other programmable parameters (e.g. band switching) are TTL level controlled. These mini-instruments provide distortion, dynamic range, and programmability features normally only associated with costly IEEE488 bus instruments yet are inexpensive and small enough to be designed into your OEM equipment. Signals from d.c. to over 5MHZ may be processed with this technology and VVS invites you to discuss your special needs should this standard product line not satisfy your requirements.



KEY SPECIFICATIONS

- dc to over 100KHZ frequencies.
- 100:1 tuning range on each band.
- Filters have over 90dB dynamic range.
- Oscillator THD: As low as –95dBr.
- Control Speed: 10 millisec typ.
- PWA mountable, 3.5x2.5x0.8 inch typ.
- Low Cost ($75 to $150 typ.)

STANDARD INSTRUMENT SERIES

- Series 300: Low Pass Filters (4 Poles).
- Series 310: High Pass Filters (4 Poles).
- Series 330: Band Pass Filters (2 Pole Pair).
- Series 400: Oscillators (Quad. Outputs).

Enhance Process Controller performance with panel instruments from DCI

Time-of-Day and Calendar Clocks with BCD outputs and Battery Back-up provide master timing for your process controller. Remote Readouts accept BCD information and display in digital form. Digital Comparators and Counter/Comparators give convenient remote setpoint control via thumbwheel switches.

Timing, Counting and Controlling

Totalizing counters and Timers measure, display and control time from microseconds to hours. Display events per unit time (Frequency, RPM, etc.), measure low frequencies (100 Hz. and below) with resolution to .01 Hz in one second, or perform bi-directional counting at rates up to 1MHz.

Dixson Bargraph—
Meter/Controllers are solid state instruments that can be used in unlimited measuring and controlling applications. They combine the instant trend recognition of an analog meter with the precision of a 2½ or 4 digit LED display. The Model 101 provides a 1.0% resolution. In addition, these instruments may be used as HI-LO Controllers or Annunciators in process or other control applications.

The analog scale, set point annunciators and digital display are red LED's. In addition to displaying readings, the LO, HI and ALARM set points may be utilized to activate external devices. Flashing segments indicate under/over range conditions.

The analog display is available in the bar mode with center or end scale zero. The Model 051 features a 5″ scale divided into 51 segments. The 101 has a 4″ scale with 101 segments.

Sensitivity ranges include both AC and DC currents and voltages for virtually any application as follows:
DC Volts: 50mv to 250V
DC Current: 50ua to 5A
AC Volts: 250mv to 250V
AC Current: 1ma to 5A.

Set point controls are normally supplied internally to prevent tampering. As an option they may be front panel mounted for easy accessibility. The HI point must always be higher than LO, but the ALARM may be set anywhere. The internal microprocessor provides a "failsafe" condition by always reading the initial settings at startup. Keylocks are recommended for critical applications.

Dixson Bargraph Meter/Controllers are supplied in handsome black NORYL or ABS complying with UL94V-0 or -1. The P/C board protrudes at the back for easy engagement with an edge connector or terminal block.

Operating temperature range is from 0° to 60° C. Current drain: Model 101 300ma; Model 051 670ma.

Options for the bargraph include: set points, center zero, 2½ or 4 digit readout, differential input model, recorder drive analog output, hold function, suppressed scales, custom algorithms and scales, digital interface model.

Accessories include: Edge connector, terminal block interface, power supply. Unit pricing ranges from $80.00 to $300.00 with options. For complete details call for a catalog.

YOUR RELIABLE SOURCE FOR PANEL INSTRUMENTATION

MULTIPURPOSE DIGITAL PANEL METERS

MODEL 2004

Newport is your source for the most complete line of digital panel meters. Specialized models are available for a wide range of input signals. Input power can be 24 Vac, 120 Vac, 240 Vac, 5 Vdc, or 9-32 Vdc (isolated). Some models can take power directly off a 4-20 mA current loop (see Process Transmitter and Indicator Section).

Three types of displays are offered: LED, PGD (gas discharge), and LCD. Most units are designed for panel mounting in a standard 1/8 DIN cutout (92 x 45 mm). Some offer an optional case for mounting in a NEMA cutout (99.7 x 42.7 mm). Most models offer BCD as a standard feature or as an option to interface to printers, comparators, and other instruments.

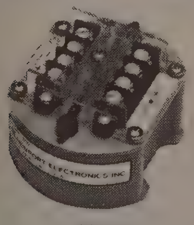
PROCESS TRANSMITTER AND INDICATORS



MODEL 502

Model 502 is a 4-20 mA two-wire thermocouple transmitter with outstanding industrial specs: waterproof housing, −40 to 85°C operating temperature, 500 Vrms input-to-output isolation, 120 Vac differential input and output protection, and 9 to 45 Vdc supply compliance. Model 508 is a current loop indicator, which derives its power directly from the current loop with a 2.5 Vdc voltage drop. Its 5-digit LCD readout can be programmed to show engineering units. It features the industrial specs of Model 502. Model 558 is an unsealed version of Model 508 for panel mounting in a 1/8 DIN cutout (92 x 45 mm). A splashproof lens is optional.

Synchro Panel Meters

North Atlantic's broad experience in advanced synchro/resolver instrumentation has resulted in the development of the Model 800 and Model 801 Synchro Panel Meters.

Designed for portable, system or test set applications, North Atlantic's Synchro Panel Meters can operate directly off the stator and rotor input signals, requiring no separate power. A broad frequency range of 47-1200Hz and programming for all standard synchros and resolvers results in maximum versatility for the user.

The 800 and 801 Synchro Panel Meters use a Type II tracking servo loop which results in no tracking lag error up to the maximum tracking rate. The bright and very large .56″ L.E.D. display allows readability even under the most difficult conditions. In addition, a tri-state parallel B.C.D. output is available at the rear panel connector for remote use. To permit data transfer to a computer or other digital device without having to freeze the converter, a data valid signal is available at the rear connector.

Both Synchro Panel Meters have a ±2° offset adjustment on the back panel to allow for final system zeroing without the sometimes difficult task of physically "tweaking in" a remote synchro.

A prime consideration in the circuit design of the Synchro Panel Meters was reliability and maintainability. No sealed modules are used; all components are accessible and test points are provided for signal tracing.

TRIPLETT

PANEL

Custom tooled . . . custom specifications or standard off-the-shelf . . . Triplett can supply your panel instruments or requirements.

Even though Triplett offers a wide selection of different styles, sizes and types of standard panel instruments, a large proportion of our customers require custom designed instruments. Many have a specific requirement for custom packaging to enhance the appearance or function of their product.

Triplett's versatile GL-GL/B Series provides a flexibility that may enable you to save considerable tooling expense by utilizing a standard back with a custom designed front panel. This flexibility can save you up to 50% on tooling costs.

If your requirements do not demand special packaging, but do demand custom instrument movements, Triplett engineering can also design to your accuracy, tracking, resistance or damping requirements.

Panel Instrument parameters and standard case styles are shown below to assist you in determining your instrument requirements.

METER SPECIFICATIONS

Instruments can be DC or AC, Taut-Band (Suspension) or Pivot and Jewel and designed to your accuracy, tracking, resistance, sensitivity or damping requirements. They can be zero left or right, up-scale zero, zero center (null meter) or with a suppressed zero.

DC Instruments are the d'Arsonval type with linear scales, extra light moving coil, rugged construction, Bar-Ring Magnet and one piece diecast frames.

AC Instruments are either the moving iron vane type with viscous damping and light moving parts or the rectifier type.

Coil Support System—Both the taut band and pivot and jewel systems are available. All pivot and jewel movements have selected spring back jewel bearings with highly polished and specially treated pivots.

Resistance—Instruments can normally be designed to meet your internal resistance requirements. For best results, current instruments should be low resistance and voltmeters should be high resistance.

Accuracy—Instruments can be designed to within ½% (standard ±2%) with mirror scales and knife-edge pointers.

RANGES

DC Ammeters—From 5μA to 50A with internal construction and up to 5,000A using an external shunt.

DC Voltmeters—from 5mV to 1000V with internal construction and up to 5,000V using an external multiplier box.

AC (Iron Vane Type) Ammeters—from 5mA to 50A with internal construction and up to 1,000A using external current transformer.

AC (Iron Vane Type) Voltmeters—from 1.5V to 600V with internal construction and up to 1,000V using external multiplier box.

AC (Rectifier Type) Ammeters—from 0.5mA to 10mA.

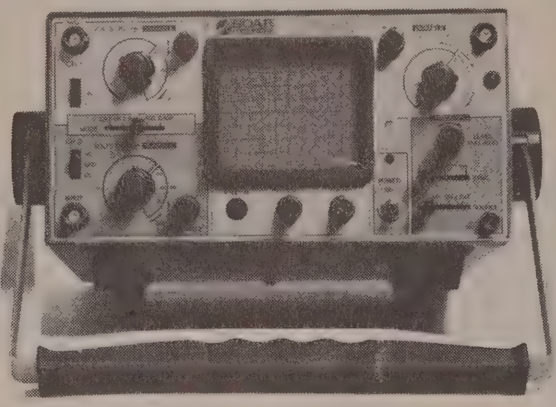
High Power Performance . . . WHERE IT COUNTS!

15MHz DUAL TRACE PORTABLE OSCILLOSCOPE

NORTH AMERICAN SOAR corporation



MODEL 3015

Accessories supplied:
Detachable 3 conductor AC cord

Optional Accessory: CC-3015 carrying case with shoulder strap.

Price $699.00 each

FEATURES

- WIDE BANDWIDTH DC TO 15MHz and HIGH SENSITIVITY of 2mV/DIV.
- AUTOMATIC RECHARGING: The internal battery is safely and automatically recharged while AC line power is supplied whether the oscilloscope is turned On or Off. When the internal battery reaches full level, the charger automatically goes to trickle-charge preventing over charge. A BATTERY CHARGE indicator changes from red to green when the battery is ready for use.
- INTERNAL GRATICULE and FRONT PANEL TRACE ROTATION CONTROL.
- POWER SUPPLY: The built-in switching regulator assures high stability of sensitivity and intensity regardless of line voltage fluctuation between 90V–130V or 180V–260V. Rechargable Ni-Cad battery provided runs scope for approx. 2 hours. Also, any DC power (11～30V; 7.2VA) can be used as EXTERNAL DC SUPPLY.
- STABLE TRIGGERING: Simple one-knob-operation for stable triggering. ×5 Magnifier expands sweep up to 0.1μs/DIV.
- SMALL SIZE and LIGHT WEIGHT but with all the features of a standard bench unit including full mode and trigger source selections.
- X-Y MODE: When SWEEP TIME/DIV is turned to CH-2 position, X-Y measurement can be made with high sensitivity 2mV/DIV. CH-1 becomes Y and CH-2 becomes X.
- AUTO FREE RUN: Auto free running is available for easy zero level reference when no signal is applied to vertical inputs.
- ADD/SUB: Pulling the CH-2 POSITION knob inverts polarity of CH-2 signal: So, added or subtracted signals are easily observed.

TS-8123

SUPER-HIGH-SPEED STORAGESCOPE

IWATSU offers the 100 MHz oscilloscope with a super-high writing speed of 2500 divisions per microsecond (1 div = 12 mm).

In addition, a digitizing speed of 1000 div / µs, which is equivalent to the conversion speed of a 40-ps (25-GHz) clock can be obtained when waveforms are converted from analog to digital format after analog storage.

Converted digital data are sent via the standard GP-IB interface, to a computer for digital signal processing.

The TS-8123 uses a large, 7-inch cathode ray tube (CRT) developed by IWATSU, which displays bright, sharp traces and further broadens the scope of measurements.

FEATURES

- 2500 div/µs super-high writing speed
- Stored waveforms can be digitized
  1) Ultra high speed: equivalent to 25 GHz clock
  2) 8-bit (1/256 resolution is independent of input frequency even with 100 MHz signals)
  3) Easy operation by simply pressing the Write & Read switch
- Stored waveform can be monitored on an external monitor screen and recorded on a VTR or printed. A composite video signal output is provided
- Measuring conditions can be displayed. Pressing the Scale Factor switch displays the measuring conditions
- Waveform comparison is possible. The stored waveform can be digitized and compared with another digitized or real-time waveform

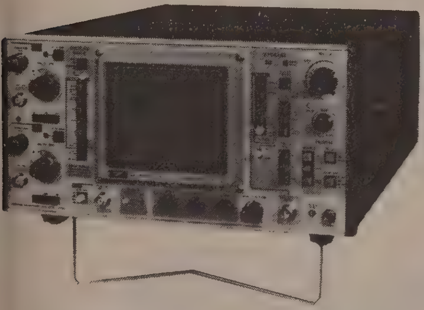
SS-5802

DIGITAL STORAGESCOPE



The SS-5802 is a unique measuring instrument combining the functions performed conventionally by two separate instruments; a transient recorder and an oscilloscope. It digitizes analog input signals and stores and displays them; it also works as a 3-trace oscilloscope with a bandwidth of 10 MHz.

Real-time and stored waveforms can be displayed simultaneously for comparison. Another powerful feature is the provision of a GP-IB interface which allows connection of a controller so that operations can be coordinated with customer's program flow. The SS-5802 can also be used to monitor the progress of low-speed writing (WATCH mode).

FEATURES

- Built-in GP-IB (General-Purpose Interface Bus) interface
- High-brightness CRT
- 3-channel 10 MHz oscilloscope function
- 8-bit x 2048 word/channel, 1 µs/word digital storage
- Both real-time and digital storage waveforms can be displayed on the CRT simultaneously
- WATCH mode allows monitoring of on-going low-speed input signals at low writing speed clock rate
- PEN recorder output

KIK Scopes

Eight reasons why KIK–Scopes are your best buy:

1. Satisfaction guaranteed or your money back: What could be more assuring. Just order a KIK-scope and try it for 30 days. If it isn't everything we say it is . . . if it won't match or outperform any comparable scope, just return it. We'll refund your purchase price.

2. Two-year warranty: As a reflection of the confidence we have in the quality components and workmanship of KIK-scopes, Kikusui offers a two-year limited warranty as opposed to the one-year warranty offered by most scope manufacturers. This virtually guarantees you two full years of cost-free operation. **Three year warranty available on several models if registered with the factory.**

3. Quick and easy maintenance: Although many manufacturers claim modularity for their scopes, a quick check of the internal construction will show that they are semi-modular at best. However, virtually every KIK-scope is completely modular. Components are mounted on boards that can be easily removed. In the event of trouble, simply return the faulty board to Kikusui and a replacement will be sent immediately. This not only reduces the cost of maintenance, but also assures minimum down time.

4. Nation-wide service is available through your local Honeywell service center in most major cities. Contact your local service rep for warranty service, maintenance, routine calibration and service. Or consult the factory for prompt assistance.

5. Outstanding reliability: Kikusui designs and builds scopes to work . . . accurately and dependably under a wide range of conditions and environments. In fact, our service records indicate that the failure rate of KIK-scopes is approximately one-tenth that of the industry average. A comforting statistic for potential customers.

6. Features and performance plus: If you'll check the specifications of KIK-scopes, you'll find that almost every model has a counterpart from a major scope manufacturer. That is, your KIK-scope will do everything that theirs will do . . . and, most often, a lot more. We designed them that way to offer you features and performance, plus.

7. More performance for your dollar: Although KIK-scopes offer performance, features and reliability that are unmatched by any other scopes, they are priced very competitively. In fact, in most cases you'll find them to be 10% to 15% less than the scopes of other major manufacturers.

8. 30 years of experience: Our parent company, Kikusui Electronics is one of Japan's leading manufacturers of electronic test equipment. They manufacture diode curve tracers*, RC oscillators, function generators*, calibrators*, analog voltmeters, digital multimeters, frequency counters, level meters, attentuators, wow and flutter meters, distortion meters, voltage testers*, W/I/R testers*, lab type and digital programmable power supplies.

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with The System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will accompany your System.

TEK 2200 MULTI-PURPOSE OSCILLOSCOPES

THE PERFORMANCE/ PRICE STANDARD IN PORTABLE SCOPES.

The 2200 Series ushered in an innovative design concept that substantially lowered the cost of a Tek-quality scope.

Now Tek has improved its 2213/2215 scopes with brighter displays. Greater accuracy. And more sensitive triggering. At no increase in price.

There are over 25 specification and feature enhancements such as a 10 MHz bandwidth limit switch, improved CMRR and sweep accuracy. Plus TV line, true P-P auto and single sweep triggering.

Like other members of the Tek 2000 family, the 2200 Series offers the industry's first three-year warranty on all labor and parts, including the CRT. A variety of maintenance contracts, economically extending this coverage even further, are also available.

2213A

The 2213A is a 60 MHz, dual trace oscilloscope offering unprecedented value in both initial and life cycle costs. With single time base delay, the 2213A provides intensified and delayed sweep at a low cost. An ideal choice for general purpose applications, the 2213A is also well-suited for use in education. The 2213A works anywhere in the world, thanks to a high-efficiency power supply that has eliminated the need for line switches, and even made a cooling fan unnecessary.

2236

The 2236 100 MHz measurement system with integrated counter/timer/DMM

The first scope to make counter/timer/DMM-type measurements through the scope system, the 2236 makes possible consolidated set-ups and combinations of measurements that have never been possible before. Gated counter measurements, for example, can be made via the B trigger with automatic, digital readout of results. You also get direct digital readout of frequency, period and Δ-Time measurements with accuracies to 0.001%. The fluorescent display also provides user prompts to further simplify operation. Its productivity advantages extend from routine service to complex design tasks.

All 2235 features, plus:
Direct frequency and period measurements from 0.2 Hz to 100 MHz.
Direct width measurements from 5 ns to 5 seconds.
Direct totalizing to 2^{23}—1 events.
Triggered and non-triggered delay time and Δ-Time measurements.
Frequency and time measurements are auto-ranged and auto-averaged for best resolution.
100 MHz counter time base yields time resolution to 10 ps and frequency resolution to 10 μHz with averaging.
±5000 count DMM measures voltage through Ch 1 input: dc to 0.3%, ac true rms 1.0%, 0.4999 V to 49.99 V (499.9 V with 10X probe) full scale.

- ☐ *Save to $50 per probe*
- ☐ *X1, X10, X100 attenuation and switchable X1-X10*
- ☐ *Bandwidths to 300 MHz*
- ☐ *Optional actuator pin for scopes with readout*

- ☐ *Pictured accessories included*

The only line of modular, repairable probes other than Tektronix. Wide compensation ranges allow TPI probes to adapt to HP, Philips, Tektronix, Hitachi, Kikusui, B&K and all other makes. Risetimes of 1.2 and 1.4 nanosec. with less than 3% overshoot assure precise signal transfer. Repair requires no soldering so it can be done on site. Cable, tip, head, and BNC all screw together for more secure attachment than snap-on. For very fast signals an optional probe tip accessory gives essentially zero-length ground lead. Models with READOUT have an Activator Pin in the BNC connector to automatically indicate X10 deflection factor on scopes with knob skirt or CRT readout feature.

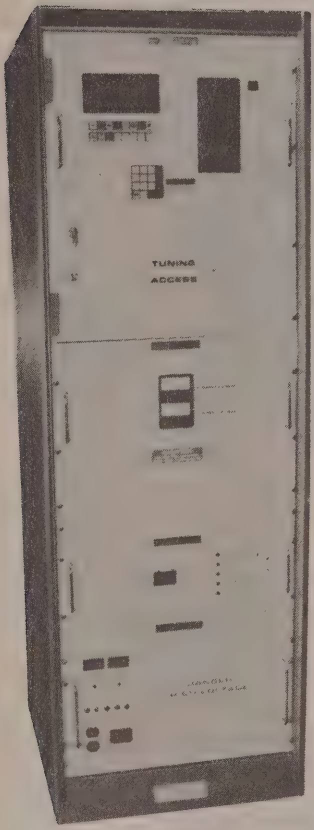
MICROWAVE SYSTEMS

COMMUNICATION AMPLIFIERS

- C Band 5.9-6.4 GHz
- K Band 14-14.5 GHz



"COMPUTER COMPATIBLE" KLYSTRON AMPLIFIER SERIES 10000

Producing Klystron and TWT amplifiers for commercial satellite earth stations, MCL's engineers have provided solutions to most communication systems' problems. For many years, our engineers have been known as some of the finest microwave problem solvers in the industry.

Two excellent solutions incorporated into our equipment are: CMOS logic-controlled fault isolation circuitry which shuts down all high-voltage functions within 8 ms should key components fail, and our unique arc detector with photo-diode sensing coupled with a PIN-diode switch which removes RF drive.

Other features include forward/backward fiberoptic inputs which survey the entire waveguide including the Klystron window, plug-in PC boards, color-coded LED status indicators displayed on panel fronts to make trouble-shooting easier and quicker, and regulated beam power supply.

With C-Band units having from 75 W to 3,350 W outputs and system gains up to 85 dB; and 6 Ku-Band frequency models with from 50 W to 2,000 W and up to 75 dB system gain, MCL's HPA series amplifiers provide the best answer for your communications systems.

A BATTERY SHOULD BE DESIGNED TO MATCH YOUR SPECIFICATIONS. NOT VICE VERSA.

Has this ever happened to you?

Your specs and their battery complement each other about as well as the proverbial square peg in a round hole.

And oddly enough, when that happens, you're the one that gets sent back to the drawing board. Not them.

After laboring months, or even years on specifications, you're forced to compromise for want of a power system.

Well, that won't happen if you bring your project to Saft first. We're a leading manufacturer of all types of high technology electro-chemical energy systems: Nicad®, Lithium, Gelyte, and Lead Acid just to name a few.

In fact, we're the ultimate power source. Unlike many of our competitors we give you choices. Not excuses, or whatever happens to be on the shelf.

Add to those choices our expertise and innovative design capabilities, and you'll discover we can solve many of your energy problems.

You'll find Saft batteries virtually everywhere: in computers, aviation, military, medical, home appliances, and even in aerospace.

Ours is the original equipment battery on the Boeing 757 and 767 jumbo jets, the most advanced aircraft in the sky today.

You'll find a Saft battery safeguarding the electronic memory in portable drug pumps, the latest medical breakthrough in the control of diabetes.

We're even considered a pioneer in rechargeable batteries used in video cassette recorders, stereos, photoflash equipment and mobile transceivers. Batteries that can be recharged up to 1,000 times.

If your project requires a high technology electro-chemical energy system, talk to a specialist at Saft first.

We'll give you a battery that's custom fit to your specifications. Not ours.

For more information, contact SAFT America Inc., 711 Industrial Blvd., Valdosta, GA 31601 or call (912) 247-2331.

MORE POWER TO YOU.

This Guide provides a quick reference to most of the battery systems used in electronic applications. It should be used as a starting point to select the style of battery needed. The next step is to turn to the manufacturers' data pages in EEM and then contact the manufacturer or the nearest sales office listed in the EEM Yellow Pages.

ZINC-CARBON (Leclanché)

The most common zinc-carbon batteries are shown below along with the type numbers of only two manufacturers. Most types are available from other suppliers: Avex (**3**•1403), Bren-Tronics (**3**•1404), Power Group (**3**•1420), Tauber (**3**•1433) and Varta (**3**•1436).

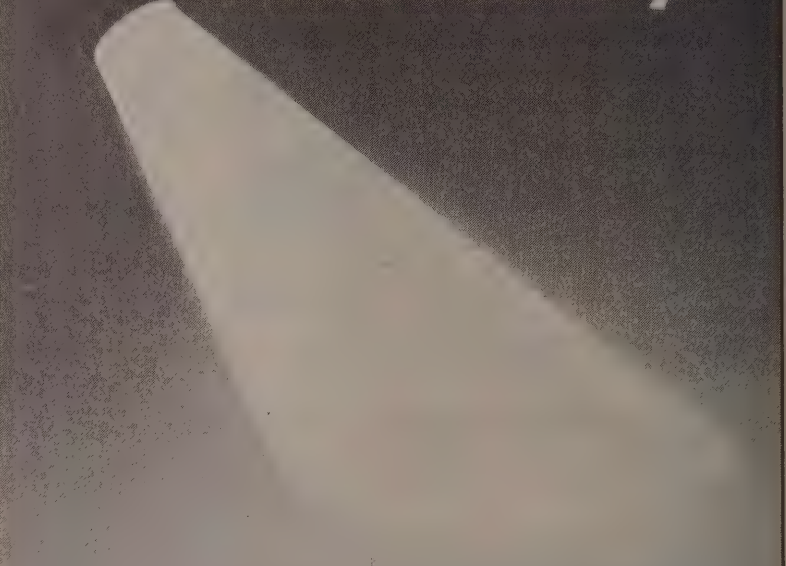
"Is this your next battery?"



Nearly 90% of all the battery applications we've been involved with over the years started with NOTHING ... nothing that is but a need.

We turn needs into concepts which become custom designed batteries ... batteries which have accommodated literally thousands of diverse situations requiring portable power sources. In addition, we have 100's of standards, any one of which might be your next battery.

Our batteries have foiled would be bank robbers, provided a safety factor in jumbo air liners, guided ships in treacherous waters and have powered rescue beams which have saved lives of lost hunters and downed pilots.

From ideas to implementation ... from prototype to production, Bren-Tronics is a powerful source for ideas in portable power sources.

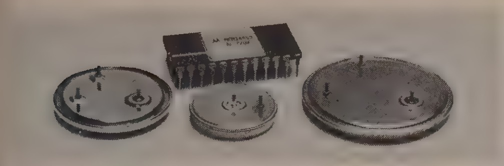
Lithiode™...Lithium-Iodine Batteries

The solid-state chemistry makes the difference



The only solid-state lithium battery for CMOS RAM backup.

A Lithiode™ cell is formed when a lithium anode is brought into contact with a cathode composed of iodine and an organic which forms a conductive charge transfer complex (CTC). An initial chemical reaction between these components forms the electrolyte: solid lithium-iodide.

As current is drawn from the cell, lithium is oxidized and iodine reduced, forming additional lithium-iodide. This lithium-iodide, which serves as both electrolyte and separator, accumulates as the cell is discharged, increasing the internal resistance. The result is an initial linear decline in voltage, represented on the discharge curves. Later, when the CTC loses most of its iodine, the cathode itself begins to rise in resistance. This results in the "knee" seen in the discharge curves.

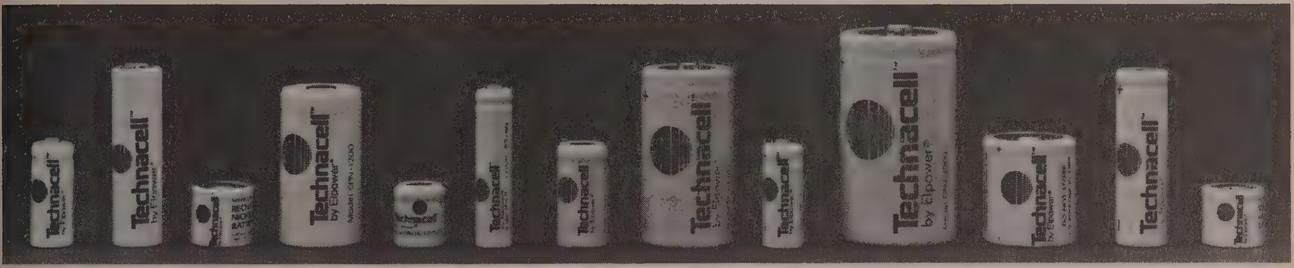
Operating Temperature Range:
Discharge: −40°C to 60°C (−40°F to 140°F)
Charge: −20°C to 50°C (−4°F to 122°F)
Capacity is rated at 20°C (68°F)

Depth of Discharge: Although battery design tolerates deep discharges, for maximum life a low voltage cut-off circuit is recommended for discharges below 1.66 volts per 2 volt cell

Technacell Nickel Cadmium Batteries



The Technacell nickel-cadmium rechargeable batteries are rated at 1.2 volts and are available in single cell capacities from 110 mAH to 4000 mAH in industry standard sizes.

These cells are capable of more than 750 charge-discharge cycles. More than eight years of life can be expected when subjected to constant trickle charge at room temperature. High temperature models are also available for ambient temperatures ranging to 65°C.

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with The System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will accompany your System.

Don't waste any more time. Get organized now!

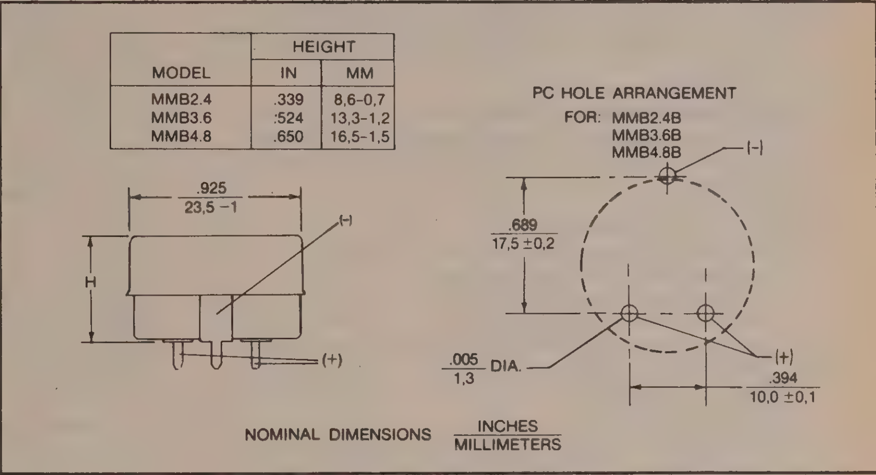
Rechargeable NiCd Memory Backup Batteries PC Board Mount

MMB3.6B
FRANKLIN PARK, ILLINOIS

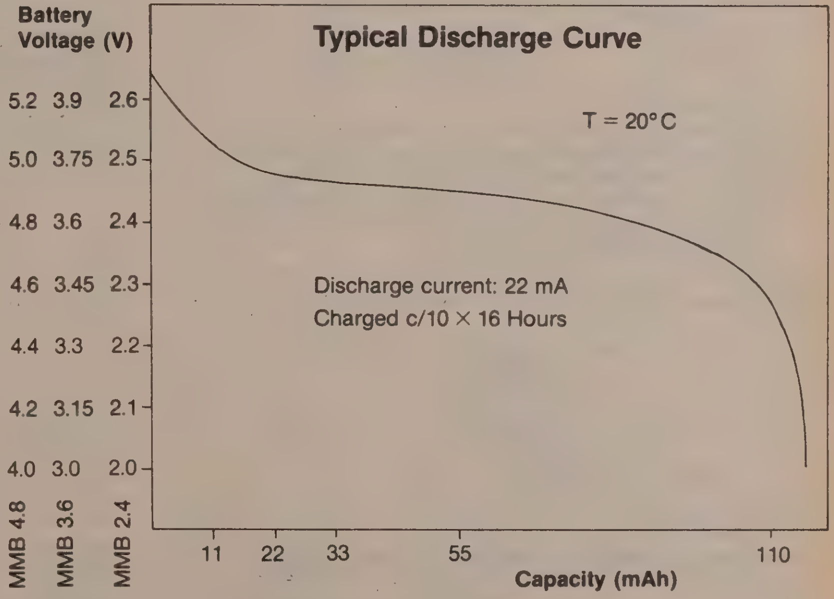
MMB series batteries feature a unique, patented electrode configuration that minimizes the "memory effect." NiCd MMB batteries are thus capable of maintaining a cycle of constant trickle charge when power is on, slow discharge when power is off, with a typical life expectancy in excess of 5 years.

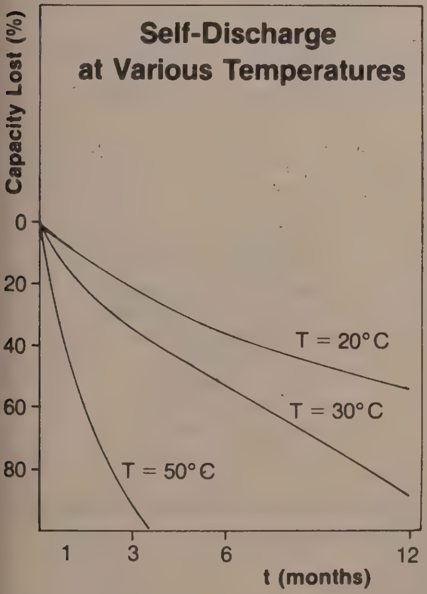
Easy PC board mount — can be wave soldered (5 sec. max) directly to the printed circuit board; no tie-down straps are needed. MMB batteries take up less than 1″ diameter board space and have low seated height (only .524″ for 3.6V models).



MODEL	HEIGHT IN	HEIGHT MM
MMB2.4	.339	8,6−0,7
MMB3.6	:524	13,3−1,2
MMB4.8	.650	16,5−1,5

NOMINAL DIMENSIONS INCHES / MILLIMETERS





Model Number	Nominal Voltage (V)	Nominal Capacity (mAh)	Discharge End Volts (V)	Maximum Discharge Current (mA)	Maximum Charge Current (mA)	Max. Continuous Trickle Charge* (mA)	Temperature Range (°C)

MM4.8B	4.8	110	3.6	165	11	1	Storage: -30 to +55

Occasional overcharging at recommended charge rates will not adversely affect the battery's overall performance. Deep discharging or driving into reverse polarity, however, should be avoided.

*0.5 mA recommended.

RECHARGEABLE SEALED LEAD-ACID BATTERIES

The LCR Series is a sealed lead-acid rechargeable battery system. The lead-calcium rechargeable (LCR) battery, will stand up to tough operating conditions such as overcharge and deep discharge. In field service, troubles due to abnormal, improper operation or misuse are reduced to a minimum.

Suggested Applications

- Power sources for various portable equipment.
- Power sources for power failure back-up and/or emergency use.

Major Features

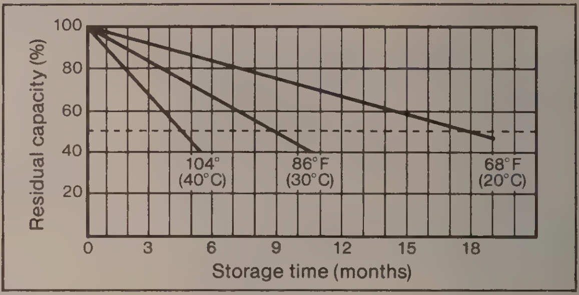
1. Exceptional deep discharge recovery.
2. Long service life; float or cyclic.
3. Gelled or starved electrolyte.
4. Maintenance-free operation.
5. Charge, discharge, or store in any position.
6. No corrosive gas generation.
7. Leakproof design.
8. No memory effect.
9. Approved as "dry cell" for airshipment by Department of Transportation and IATA.

• Temperature Range Summary

Discharge:	5° ~ 122°F (-15° ~ 50°C)
Charge:	32° ~ 104°F (0° ~ 40°C)
Storage:	5° ~ 104°F (-15° ~ 40°C)

• "Shelf Life"

Self-discharge rate is very much dependent on the storage temperature as shown in the graph. Lower temperatures allow the battery to be stored for longer periods. (Each ten degree drop results in a halving of self-discharge rate and doubles storage time.)



• Cycle Life

Cycle life is very much dependent on the depth of the discharge which the battery encounters during each cycle.

Discharge Depth	Resultant Cycle Life
100% discharge	200 ~ 250
60% discharge	600 ~ 700
30% discharge	1500 ~ 2000

• Standby Life

The expected float life at room temperature is estimated to be **more than 8 years** on the basis of accelerated tests.

RECHARGEABLE NICKEL CADMIUM BATTERIES

Applications

For Cyclic Use

- Consumer Applications
- Office Equipment
- Tools
- Instruments and Medical Equipment
- Photography
- Toys and Hobby

For Trickle or Float Charge Use

- Emergency Devices
- Memory Back up

General Characteristics

Panasonic offers a wide range of cells for varying applications and requirements:

- Standard
- Rapid Charge "R"
- High Temperature "H"
  Emergency Back Up
  Memory Back Up
- High Capacity "E"
- High Rate Discharge "P"

Discharge

The discharge characteristics of the Panasonic Ni-Cd cell are extremely flat when compared to those of dry cells.

Discharge voltage characteristics depend upon discharge current and temperature.

Life

The Panasonic Ni-Cd cell can be charged and discharged hundreds of times.

Under normal conditions, more than 500 cycles (charge/discharge) can be expected. The cell has reached its end of life when capacity falls below 80% of original rating.

Life is decreased by charge/discharge cycles beyond the specified temperature or current range or by extended storage under conditions which exceed specified temperature limits, or by cell reversal.

Effects of Temperature upon Performance

The standard Panasonic Ni-Cd cell has excellent discharge characteristics at normal temperatures. If the temperature during charge and discharge is high, capacity tends to decrease. When cells are trickle-charged at a high temperature, this tendency is accelerated. Therefore, it is recommended that special high temperature cells be used for applications in high temperature ambients.

Special Purpose Batteries

Rapid-Charge "R" type

The "R" type cell has a specially improved negative plate with increased gas absorption characteristics. It can be subjected to uncontrolled charging at the 1 C, rate and a Rapid charge in 1 to 1.5 hours is possible.

High-Temperature "H" type

By using a polypropylene separator, the "H" type cell can withstand a temperature of 65°C (149°F) during use. When charging is conducted at a low charging current of C/20 to C/30 in a high-temperature ambient, the "H" type cell has sharply improved capacity compared to a standard cell.

Panasonic "H" type cells for high-temperature use can be classified into two types according to application: the emergency back-up type and the memory back-up type.

(A) Emergency back-up ("H" type)
Emergency back-up normally uses DH, CH, SCH, or AAH, and a trickle or float charge of C/20 to C/30 is usually applied.

(B) Memory back-up ("H" type)
This application requires less capacity, and normally uses AAH, 1/3AAH. In addition to excellent high-temperature characteristics, the charge/discharge characteristics for small currents in the μA range are excellent.

High-Capacity "E" type

These extra capacity cells combine a high-capacity density positive plate with a high-capacity paste negative plate. These cells have 20 ~ 30% more capacity than equivalent standard cells.

High-Rate Discharge "P" type

Using plates with low internal resistance, edge-welded plates and terminals, the resulting cell has sharply reduced internal resistance and improved voltage characteristics during high rate discharge.

Charging Methods

Standard charge

Panasonic Ni-Cd cells are charged using constant current or semi-constant current chargers. The rate of charge is dependent on the size and type of cell. Standard cells, sub C and smaller, can be charged at rates from C/3 ~ C/4 to C/20.

Rapid-charge "R" type

The "R" type Panasonic Ni-Cd cell can be rapidly charged in 1 ~ 1.5 hours using recommended charging circuits and controls. The cell is normally charged at the 1C rate for 1 ~ 1.5 hours, at which time charging current is reduced to C/10 (or less) to complete the charge.

Panasonic cells can withstand very long storage time under typical conditions at a storage temperature range of -20° to +45°C (-4° ~ 113°F). If the cell must provide full capacity after storage, completely charge the cell before use. In addition, after prolonged storage, completely normal capacity can be returned within 1 ~ 3 charge/discharge cycles.

PRIMARY LITHIUM BATTERIES

Versatile, Long-Life Lithium Batteries

Since 1971, Panasonic has pioneered the development of Lithium Batteries as an extremely long life, leakproof, high-energy power source for a wide range of electronic applications.

From watches, cameras, radios and other consumer products to dependable computer memory back-up systems, Panasonic Lithiums have proven themselves as an ideal solution for today's most demanding electronic requirements.

Using a solid-state polycarbon monofluoride as the cathode, Panasonic Lithiums are **inherently** safe, remaining both chemically and thermally stable. Corrosive liquid or poisonous gas discharge is never a problem, even during long storage periods.

Features

- Inherently safer than MnO_2/Li systems
- High voltage (3V); high energy density
- Excellent storage properties
- Flat voltage characteristics
- Outstanding leak-resistant properties
- Minimum operating temperature -40°C
- 0.5% capacity deterioration per year
- Available in a wide choice of types; pin cell, coin cell and high capacity cylindrical cells

UL Recognized under the Component Program of Underwriters Laboratories, Inc. File #MH12210*

*with the exception of Type BR-C.

NICAD® SEALED RECHARGEABLE NICKEL-CADMIUM BATTERIES

GENERAL PARAMETERS

The unique features of the SAFT NICAD® system lend themselves to a wide range of product applications:

Portable Power for:

- Tools
- Instruments
- Medical Equipment
- Photography
- Portable Comm.
- Toys

Standby Power for

- Memory Preservation
- Emergency Lighting
- Logic Systems
- Alarms
- Controls
- Electronic Equipment

Sealed rechargeable SAFT NICAD brand nickel-cadmium cells and batteries offer distinct advantages not obtainable from primary or other secondary systems.

FEATURES

Long Life

Parameters of the application, such as charge rates, temperature, and discharge rates affect the total, standby or cycle, life of the NICAD cell. A life of 300 to 1000 cycles of discharge, or 5 or more years of standby power is common. Shallow discharges, lower operating temperatures, and a reduction of the overcharge, time and rates, will extend the life of NICAD cells.

Overcharge Capability

SAFT NICAD cells can be overcharged continuously at the recommended rates without loss of life or performance.

High-Rate Discharge Capability

SAFT NICAD cells are especially suited to continuous high-rate discharge or high current pulsing. This feature is due to the low internal resistance and flat discharge voltage of the NICAD cell.

High-Rate Charge Capability

SAFT cylindrical NICAD cells can be continuously charged, under most conditions, at rates up to and including 0.33C (4-hour recharge) without loss of performance. Higher charge rates (from 1 hour to 15 minutes) can be achieved with the use of temperature cutoff and voltage regulated charging methods.

Operate In Any Position

Due to their sealed construction, NICAD cells can be operated in any position, without damage to the cells or the equipment in which they are installed.

Operating Temperatures

SAFT NICAD cells are designed to operate over the following temperature ranges:

	Polytemp™	Button Cells	Standard Cells
Charge*	+15°C to +70°C	+10°C to +50°C	+ 5°C to +50°C
Discharge	-40°C to +70°C	-40°C to +50°C	-40°C to +50°C
Storage	-40°C to +70°C	-40°C to +50°C	-40°C to +50°C

*For charging at other than recommended continuous rates or at lower temperatures, contact factory.

Long Storage Life

SAFT NICAD cells can be stored indefinitely without significant irreversible degradation in their performance. After extended storage, a few charge/discharge cycles may be needed to restore full capacity.

Charge Retention

The charge retention shown is based on storage at 20°C. The self-discharge rate is a function of temperature and internal resistance. Storage at higher temperatures will reduce charge retention during storage. Cells should be charged prior to use to restore full capacity.

	Percent Charge Retained		
Cell Type	1 Month	3 Months	5 Months
Cylindrical	75%	50%	15%
Button	65%	40%	5%

Safety Vents

The safety vent on cylindrical cells may be of either hermetic or resealable design. Both are designed to release excess pressure as a safety measure to prevent cell rupture. Regardless of the vent employed, repeated venting of a cell will release gas and lower the electrolyte level in the cell causing it to dry out, degrade in performance, and ultimately fail to deliver power at a functional level. Whether hermetic or resealable, the vents prime purpose is to provide a pressure relief to prevent accidental cell rupture due to abuse or misuse.

Your SAFT representative should be contacted as to the correct vent for your application.

Internal Impedance and Resistance

The internal impedance as well as the internal resistance of a NICAD cell is low. As the cell discharges, impedance increases. The impedance increases approximately 20% for a semi-discharged cell, and approximately 50% for a discharged cell.

NICAD® STANDARD CELLS

Standard cells, due to their wide operating temperature range (-40° C to +50° C) and excellent cycle life (300 to 1000 cycles) are ideal for a majority of applications. Standard cells are the most economical of the NICAD designs and with 34 models ranging in capacity from .070 Ah to 10.0 Ah, they are also the most versatile.

NICAD® SEALED RECHARGEABLE NICKEL-CADMIUM BATTERIES

POLYTEMP™ BRAND HIGH TEMPERATURE CELLS

Polytemp's long life at high temperatures makes it an ideal backup power source for many applications including:

- Computers and computer peripherals
- Emergency lighting and alarms
- Telephone and telegraph equipment
- Stationary and portable electronic instruments
- Process control equipment

Polytemp performance is the result of a combination of electrode design innovations with a polypropylene separator material. Polypropylene is much more resistant to deterioration than the nylon separator used in standard designs.

The following table illustrates the relative effect of continuous overcharge at the 0.1C rate (where C = ampere-hour rated capacity of the cell), on capacity over time (or life). This difference in life increases substantially as the continuous cell temperature is increased above 25° C.

BUTTON CELLS

The SAFT VB type button cell is a sintered/sintered construction (ref. Figure 2). This construction facilitates discharge rates up to 10C, continuous charge rates of up to 0.05C, minimum cycle life of 300 (100% depth of discharge) cycles and continuous charge failure rates of less than 5 cells per 1000 cells after 5 years of continuous charge.

As a complement to the VB cell, SAFT offers a series of button cells of the same dimensions and capacities which are designed to withstand severe operating conditions. These VBE cells offer improved temperature and voltage performance coupled with higher reliability. (Contact your SAFT representative regarding VBE cells.)

SPECIAL LOW RESISTANCE CELLS

Low resistance cells are of a special design to provide excellent high-rate characteristics during both charge and discharge. These cells can be charged to 100% of capacity in as little as 15 minutes. They also exhibit excellent voltage retention during very high-rate discharging.
